GENERAL INTRODUCTION

John Forrest National Park (about 1580 ha) and the Red Hill area (about 970 ha) are about 25 km east of Perth and lie between Great Eastern Highway and the Toodyay Road (see Maps 1, 2). The area is mostly within the Jane Brook catchment, with the extreme north-west corner being in the Strelly Brook catchment. The western third of the Red Hill area is in the Shire of Swan, with the remainder, plus all of John Forrest National Park, being in the Shire of Mundaring. The area was the subject of System Six recommendations M21.1 to M21.4 (Department of Conservation and Environment 1983). As part of these recommendations, it was proposed that the Red Hill area be managed as if part of John Forrest National Park. Negotiations are continuing concerning the adding of this area to the National Park.

John Forrest National Park is extremely popular for recreational activities, particularly in the vicinity of the facilities area and along Jane Brook between Hovea Falls and Rocky Pool. The park receives some 250 000 visitors annually (CALM records).

The Darling Scarp runs along the western boundary of the area, which is underlain by the Archaean "granites" of the Darling Plateau (Briggs *et al.* 1980, Sallal 1983). These are overlain by a lateritic duricrust which is dissected by stream zones to expose different soil types depending on the age and degree of dissection. In the minor valleys are the sandy gravels and orange earths of the Yarragil unit. Downstream of this are the red and yellow earths of the Murray unit and, in the deepest valleys, the Helena unit. The Darling Scarp consists of very steep slopes with shallow red and yellow earths and much rock outcrop (Churchward and McArthur 1980).

Previous biological work in the area has not included site specific assemblage data. However, a detailed plant list has been compiled by Paul Armstrong (unpublished) for John Forrest National Park and the vegetation of the whole area has been mapped at a scale of 1: 250 000 by Heddle *et al.* (1980). Other than strictly opportunistic collections, previous data on vertebrates consists of a list of birds compiled by David Briggs (unpublished) and the results of trapping for mammals carried out by Morris and Bromilow (1991, unpubl.). There has been a need for an integrated botanical and zoological survey.

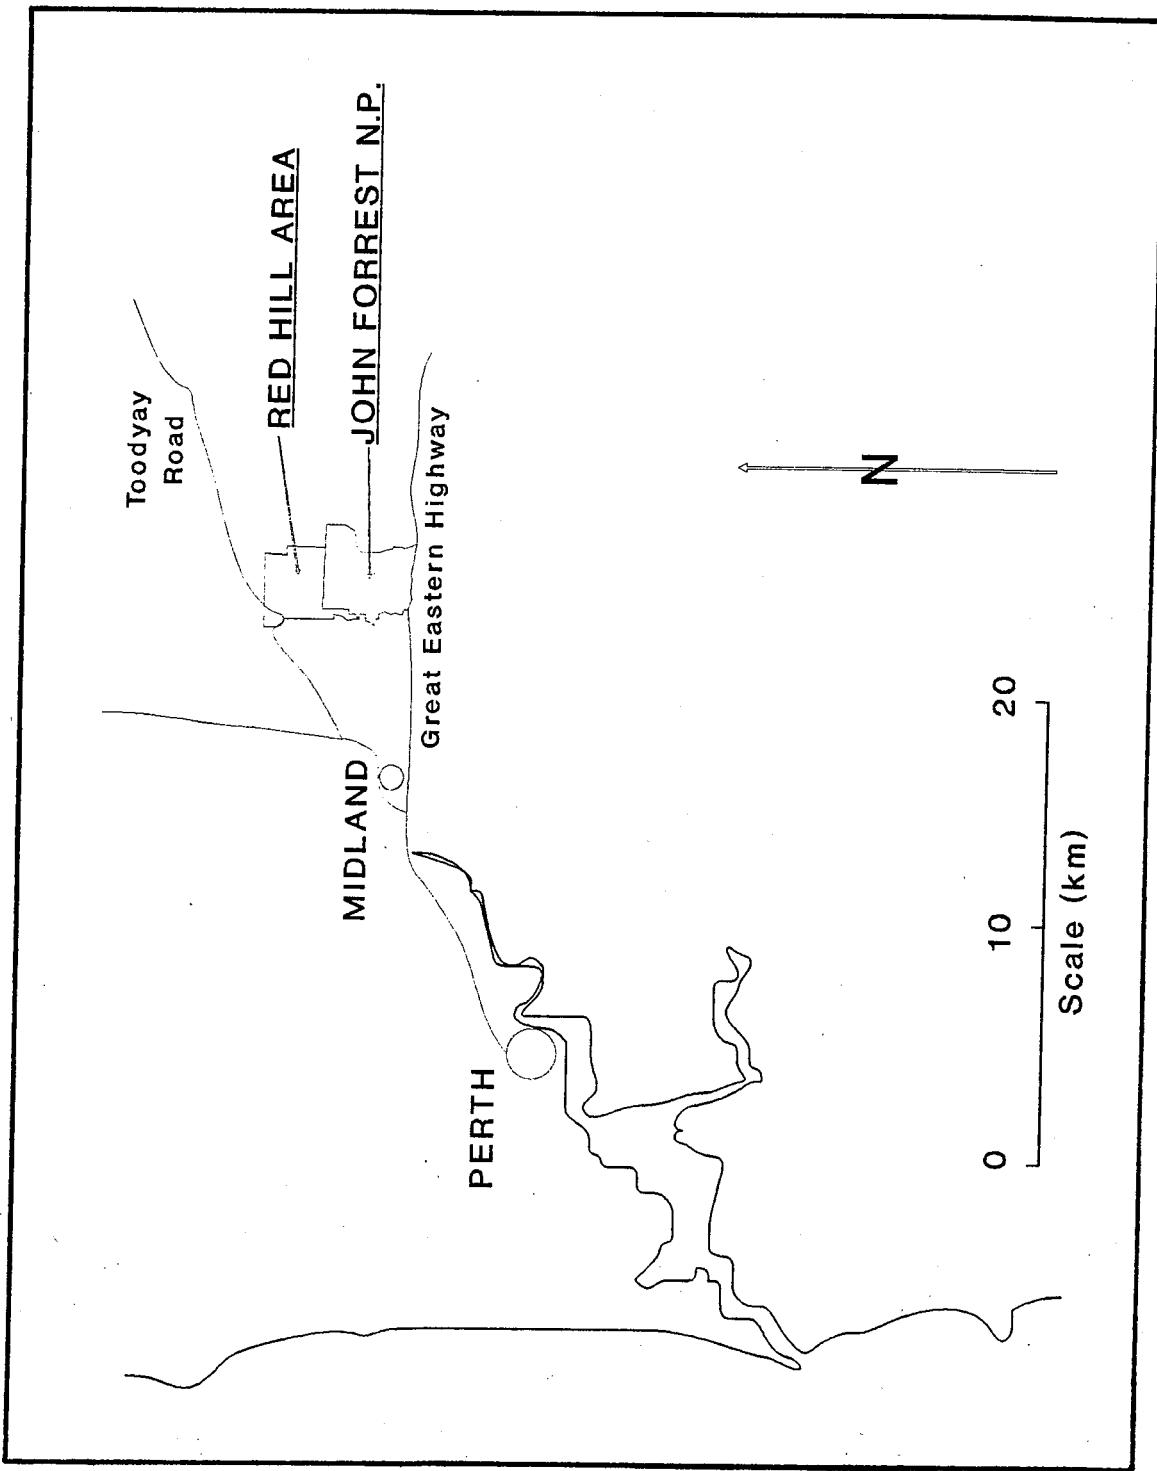

The Darling Scarp as a whole has important conservation values (Dell 1983, Dell and How 1988, Heddle and Marchant 1983) and John Forrest National Park is believed to provide important components of these values (Department of Conservation and Environment 1983, Muir 1983). However, there has been a clear need for such values to be more objectively assessed. Furthermore, because of the perceived conservation values together with the high recreational use, the Department of Conservation and Land Management has commenced writing a management plan for the area. The present study was therefore commenced with the aim of providing a more objective assessment of the conservation values and at the same time provide a better basis for management planning. When similar data become available for other parts of the Darling Scarp and Plateau (eg for Serpentine National Park - D. Lamont, in prep.), it will also be possible to evaluate the conservation values of John Forrest National Park in a more objective regional context.

The project has been carried out with funds provided by the Department of Conservation and Land Management, together with generous funding under the National Estate Program, which is a Commonwealth-financed grants scheme administered by the Australian Heritage Commission (Federal Government) and the Heritage Council of Western Australia (formerly the Western Australian State Government's Heritage Committee). Funds from the Heritage Council were used to employ consultant zoologists Ninox Wildlife Consulting and consultant botanists E. M. Mattiske and Associates. Their reports form the basis of this document.

FAUNA SURVEY

NINOX WILDLIFE CONSULTING

1.0 INTRODUCTION

A comprehensive management plan for John Forrest National Park (JFNP) is being prepared by the Department of Conservation and Land Management (CALM). An integral part of this management process is a review of the conservation status of vegetation types and their vertebrate fauna communities. To assist with this objective, Ninox Wildlife Consulting was contracted by CALM to carry out a vertebrate fauna survey centring upon a series of representative sampling sites within the park (Figure 1).

1.1 Project Description

The main objectives of this study as outlined in the scope of work were to:

- obtain exhaustive lists of all vertebrate fauna trapped or observed in unbounded four hectare quadrats;
- quantify sampling effort; and,
- make special note of any rare or unusual species encountered in the course of the work.

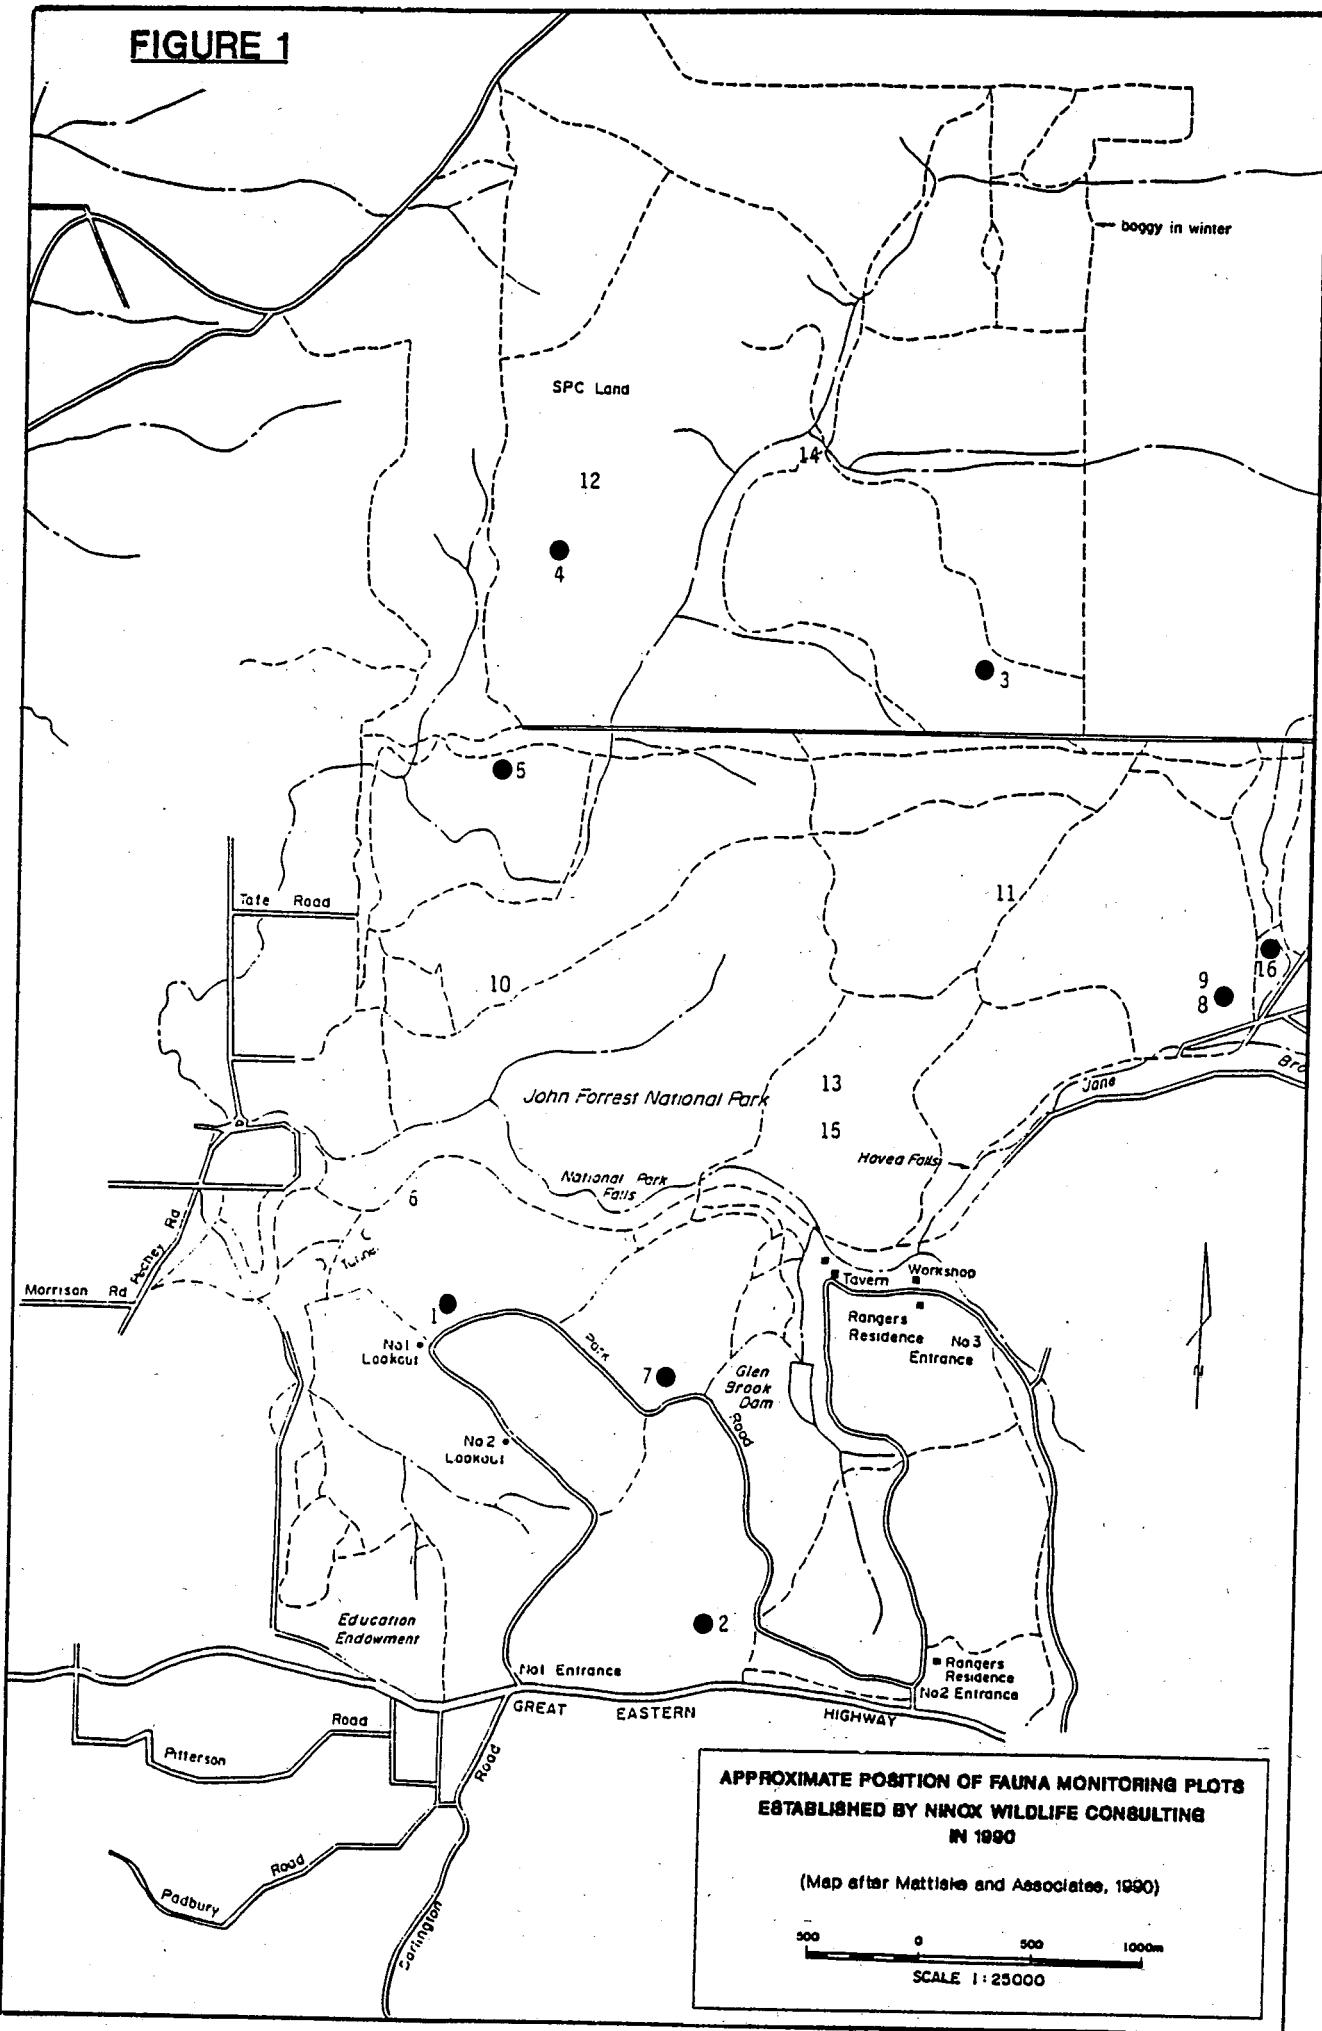

1.2 Regional Zoogeography

In any assessment of the significance of an area to fauna it is important that zoogeographic considerations are reviewed. A pioneer in this field was Baldwin Spencer (1896) who recognised three major, distinct, zoogeographic sub-regions in Australia. His concept took into account broad faunal distribution patterns which aligned fairly well with the wetter south-eastern zone of Australia (Bassian Sub-region), the northern, humid, coastal area (Torresian Sub-region), and inland, arid Australia (Eyrean Sub-region).

Birds: Spencer's concept was carefully considered by Serventy and Whittell (1976) who examined bird distributions in Western Australia and concluded that there was a need to define a fourth, and much smaller sub-region: the south-western corner of Western Australia where an intermingling of two faunas, the Eyrean and Bassian, occurred. John Forrest National Park is situated within this small south-west sub-region.

The south-west of Western Australia has a number of species of vertebrates identical to those found in southern Victoria but which no longer have a continuous distribution across the continent. More importantly, however, it supports several endemic species with no equivalent populations in eastern Australia. Examples recognised by Serventy and Whittell as being of special significance are: Western Rosella *Platycercus icterotis*, Red-capped Parrot *Purpureicephalus spurius*, Baudin's Cockatoo *Calyptorhynchus baudinii*, White-breasted Robin

FIGURE 1

Eopsaltria georgiana, Red-winged Fairy-wren *Malurus elegans*, Western Thornbill *Acanthiza inornata* and the Western Spinebill *Acanthorhynchus superciliosus*. Most of these endemics have been recorded or are likely to be present in JFNP.

Amphibians and Reptiles: Storr (1964) confirmed that the distinctness of the south-west for reptiles paralleled the situation previously indicated for birds and believed that geographical influences, especially the presence of a large belt of forest-covered laterite, explained some of the speciation which had occurred in reptiles and frogs. The discontinuous distributions of some reptiles and birds from the Western Australian Wheatbelt to the east and the coastal plain to the west of the forested block can also be attributed to this feature.

In examining the distribution patterns of south-western reptiles Chapman and Dell (1985) drew attention to a small region within the south-west. This area has a number of mesio-temperate elements from south-eastern Australia as well as a significant number of endemic species. Some typical examples of the latter are *Leiolopisma trilineatum*, *Ctenotus labillardieri*, several snakes from the genera *Notechis* and *Rhinoplocephalus* and the frog genus *Crinia*. Representatives of all of these and several other endemics were recorded during the fauna surveys of JFNP and all have distribution patterns limited to the higher rainfall, southern portion of Western Australia.

Mammals: several mammals are endemic to the South-west Botanical Province defined by Beard (1980). In many cases they extend well beyond the South-west Forest Region and have a wider distribution defined by a line from Shark Bay to Israelite Bay. Examples of these are the Western Brush Wallaby *Macropus irma* and the Honey-possum *Tarsipes rostratus*, both of which were recorded during this study.

2.0 METHODS

Vertebrate fauna surveys took place in spring (October 29 - November 3, 1990) with a second field trip in autumn (April 8 - 13, 1991). Weather conditions during both surveys were generally poor, especially in spring when only one sunny day occurred. Rain, hail, high winds and cold nights typified the weather during this sampling period. During autumn, it rained on the first day and remained cold, rainy and windy for the next two days. Thereafter, weather conditions improved during the day although all nights were cold.

A reconnaissance and site choice took place in consultation with Dr A. H. Burbidge (CALM) and Dr E. Mattiske (Mattiske and Associates) in July 1990 with traplines being established in August. Brief descriptions of each location selected for fauna sampling are shown below with detailed vegetation community descriptions available in the Flora and Vegetation report (Mattiske and Associates 1991). Site numbers (fauna series "Q") correspond with those given in the above report.

TABLE 1 Vegetation associations sampled at John Forrest National Park in spring 1990 and autumn 1991.

<u>Site 1</u>	(Q1) Powderbark Wandoo, <i>Eucalyptus accedens</i> , - Wandoo <i>Eucalyptus wandoo</i> woodland over heath.
<u>Site 2</u>	(Q2) Jarrah, <i>Eucalyptus marginata</i> - Sheoak, <i>Allocasuarina fraseriana</i> forest.
<u>Site 3</u>	(Q3) Jarrah, <i>E. marginata</i> - Marri, <i>Eucalyptus calophylla</i> forest.
<u>Site 4</u>	(Q4) Wandoo, <i>E. wandoo</i> - Powderbark Wandoo, <i>E. accedens</i> woodland.
<u>Site 5</u>	(Q5) Mixed Proteaceae - Myrtaceae heath.
<u>Site 7</u>	(Q7) <i>Agonis linearifolia</i> creekline.
<u>Site 8</u>	(Q8) Granite outcrop.
<u>Site 16</u>	(Q16) Yarri, <i>Eucalyptus patens</i> woodland.

Survey effort is tabulated below and the location of sampling areas is shown in Figure 1. In the following description of sampling methods there are two categories of data collection: Quadrat Sampling and Inventory Sampling.

Quadrat sampling: refers to data which was systematically gathered in the unbounded four hectare plots required for this survey. Since approximately equal effort was applied in all plots, apart from the trapping methods used in Sites Q7 and Q8 (Table 2), the resulting data can be used as a standardised base for site comparisons within the study area in order to assess faunal affinities or dissimilarities. This type of sampling also allows for objective seasonal comparisons of sites. Providing the same methods are adhered to, future sampling can be carried out by any suitably experienced field personnel.

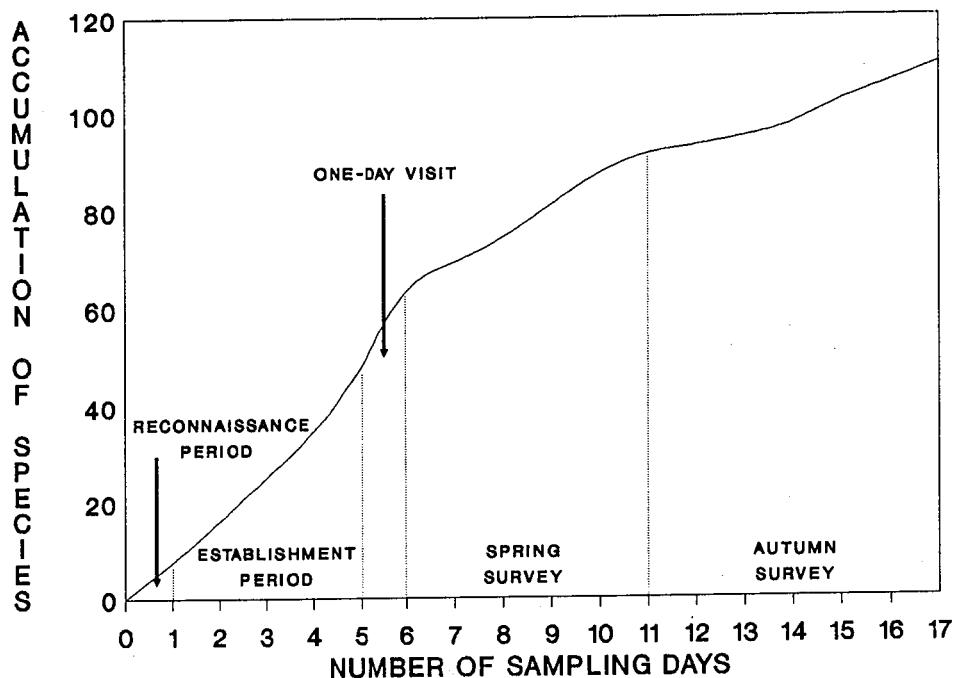

Inventory sampling: includes all opportunistically gathered, non-Quadrat data such as that recorded during the reconnaissance or while team members were traversing the study area.

Table 2 Trap sampling effort within selected vegetation associations at John Forrest National Park in spring 1990 and autumn 1991.

SITE NUMBER	Q1	Q2	Q3	Q4	Q5	Q7	Q8	Q16
No. of pit trap/nights	120	120	120	120	120	-	-	120
No. of Elliott trap/nights	-	-	-	-	-	250	250	-
No. of cage trap/nights	10	10	10	10	10	20	20	10

Figure 2 has been prepared from both inventory and quadrat data. It gives an indication of seasonal survey efficiency in that a well-surveyed location would show little or no accumulation of species after an adequate period of time. The JFNP study was still accumulating species by the end of the survey period suggesting that the potential species richness of the park has not been fully documented as yet.

FIGURE 2 Graph showing sampling efficiency of the John Forrest National Park survey.

2.1 Birds

Quadrat Sampling: each site was visited daily between 0700hrs and 1200hrs for five consecutive mornings during each sampling session. Approximately 40 minutes was spent at each site. In spring, one hour was spent in the afternoon at each location recording birds and any breeding activity. A single observer slowly moved within the unbounded four hectare area and identified all birds by sight or call.

Records from the winter site establishment period when approximately equal time was spent in each site have also been utilised since before commencement of work, all readily apparent birds were recorded. Sampling results were logged on to field data sheets for eventual transfer to a computer database.

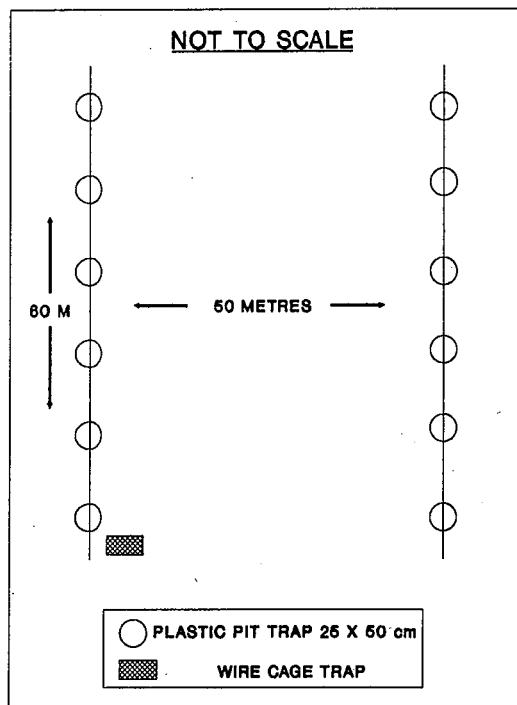

Inventory Sampling: data were gathered while travelling between sampling sites and in the course of nocturnal work. Each inventory record was allocated to a vegetation community where this corresponded to a sampling site. All other habitats, for example, the Jane Brook stream zone and Glen Brook Dam, were placed in an inventory category which represented opportunistically sampled locations, most of which were either minor vegetation communities or highly modified habitats.

2.2 Mammals, Amphibians and Reptiles

Quadrat Sampling: terrestrial vertebrate traplines were located in all of the vegetation associations listed in Section 2.0 and detailed in the Vegetation and Flora report. Pitfall traplines were established at six sites (Site Q1-Q5, Site Q16), each of which consisted of two lines of six pits (250mm x 500mm) 10 metres apart, connected and bisected across the top by 60 metres of aluminium flywire drift fence 12cm high. One cage trap was placed in proximity to one pitfall trap. (Figure 3).

Each individual trapline was permanently marked with one star picket at the first pit trap. At the conclusion of sampling, drift fences were rolled and removed and each pit trap was securely capped, covered with a small cairn of soil and rocks or logs.

FIGURE 3 Diagram showing layout of pit/fence lines used during the John Forrest National Park survey.

Two Elliott/cage traplines were established in Sites Q7 and Q8. These consisted of 25 Elliott traps and 2 cage traps.

All traplines were left in position for five nights, cleared each morning and all captured animals identified and released. Accessory information such as breeding, age and sex was logged on to field data sheets for subsequent transfer to a computer database. In addition to trapping, diurnal hand-foraging for vertebrates was conducted at each sampling site for a minimum of four personnel/hours. Techniques included identification of active animals, raking spoil heaps, abandoned ant nests and deep leaf litter, turning over rocks and logs, stripping bark from dead trees, investigating burrow systems and recording tracks or scats.

Inventory Sampling: bats were sampled using a collapsible bat trap left in position for four nights during each sampling period. This was checked each morning. The site chosen for the bat trap in spring was a stream zone near Site Q5. In autumn, Jane Brook adjacent to Site 8 was sampled. Thirty-six metres of mist net (3 x 12 metre nets) were also set for one night in autumn over the upper reaches of Glen Brook Dam. These nets were monitored for approximately two hours from dusk.

A vehicle transect was carried out along roads and tracks during the autumn survey following heavy rains in order to sample amphibians. All inventory data from beyond sampling sites was opportunistically collected as described for birds.

2.3 Nomenclature and Taxonomy

Nomenclature and taxonomy in this report follows: Blakers *et al.* (1984) - Birds; Strahan (1983) - Mammals; Storr *et al.* (1981, 1983, 1986, 1990) - Reptiles; and Tyler *et al.* (1984) - Amphibians. More recent taxonomic papers by various authors were used when applicable.

3.0 RESULTS AND DISCUSSION

3.1 Birds

A total of 63 species of bird were recorded during the study period (Appendix 1a). Fifty species of bird were recorded in the unbounded quadrats, with a further 13 observed in various other vegetation associations during inventory sampling. Eight of these were waterbirds from Glen Brook Dam or Jane Brook.

3.1.1 Species of Note

Regent Parrot *Polytelis anthopeplus* : this species does not usually occur in the Jarrah forest (Serventy and Whittell 1976), although an outlier colony separated from the main population in the Wheatbelt is present in Tuart country along the Southern Swan Coastal Plain (SSCP). The above

authors state that the species is a great wanderer compared to the Port Lincoln Ringneck *Barnardius zonarius* but is much more likely that the JFNP record is an aviary escapee. This is the first record noted by the authors in the Darling Range despite carrying out some 20 surveys of varying intensity within the Jarrah forest. All other records seen on the SSCP tended to be pairs, or larger groups of up to 17 individuals.

Diamond Dove *Geopelia cuneata* : there are records of this essentially northern species in the Darling Range from the late 1800's and early 1900's (Serventy and Whittell 1976), but the JFNP record is much more likely to be an aviary escapee in the absence of confirmatory observations from other observers. This bird is not listed in the report since it was passed on by an associate in May 1990 but was not recorded by the authors.

Red-capped Robin *Petroica goodenovii* : this species is a rare visitor to the south-west Jarrah forest, the stronghold of the Scarlet Robin *Petroica multicolor* although small numbers appear in most winters. The authors have encountered very few in the Darling Range.

Ground Cuckoo-shrike *Coracina maxima* : primarily a species of the inland interior although a sporadic visitor to the central Swan Coastal Plain where it visits open clay flats (Serventy and Whittell 1976). The successive poor seasons in the interior may account for this species appearing at JFNP. However, the record is of little relevance to the park itself, being more an interesting observation of a bird in passage from the arid zone to the wetter coastal plain.

Currawong *Strepera versicolor* : very uncommon in the vicinity of the metropolitan area.

3.1.2 Rare Species:

One species gazetted under Schedule 2 of the Wildlife Conservation Act 1950, Carnaby's Black-Cockatoo *Calyptorhynchus latirostris* was recorded. One large flock was observed feeding on the seeds of *Hakea trifurcata* near sampling site Q16, apparently a favoured location for this species since they were recorded here on several occasions in both field trips.

3.1.3 Introduced species

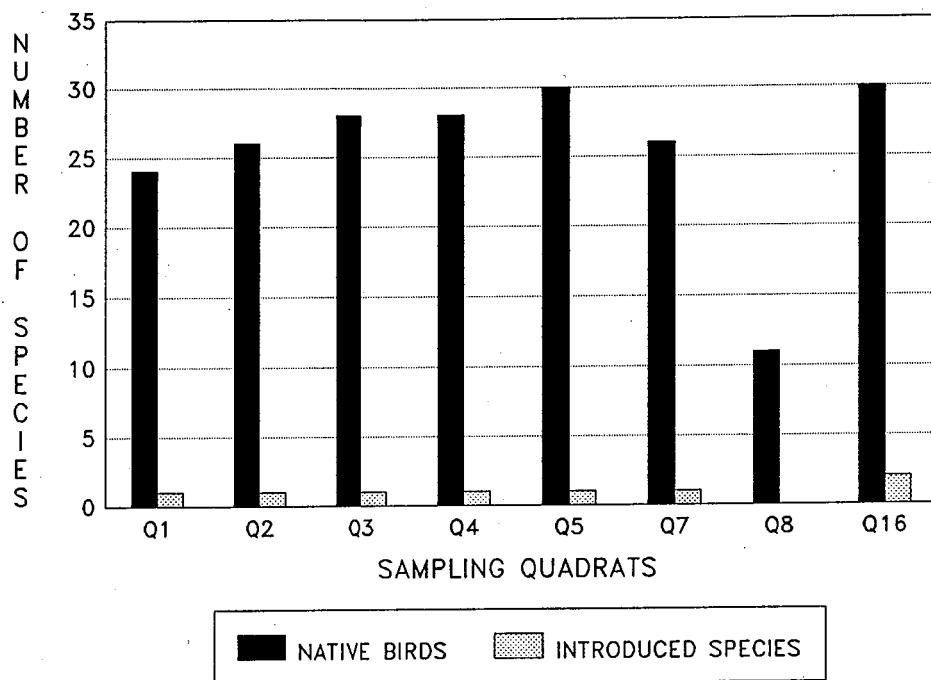

Two introduced species, the Laughing Kookaburra *Dacelo novaeguineae* and the Spotted Turtle Dove *Streptopelia chinensis* were noted. Neither species were observed in large numbers in any season.

3.1.4 Habitat Comparisons

The following graph shows the number of bird species recorded in each unbounded quadrat. Results for both seasons have been pooled to

produce an overview of species richness in habitat types; seasonal results are available in Appendix 1b-d. Introduced species have also been graphed.

FIGURE 4 Graph showing individual quadrat results for bird species recorded during the John Forrest National Park surveys. Introduced species included.

3.2 Mammals

Eight native and 6 introduced mammals were recorded during quadrat and inventory sampling in John Forrest National Park (Appendix 1a).

3.2.1 Species of Note

Honey-possum *Tarsipes rostratus* : one male Honey Possum was trapped in Heath Site Q5 and one in Wandoo/Heath Site Q1. This animal was not recorded during the most recent Darling Scarp study (Dell and How 1988) and the W.A. Museum has one record from February 1991, a cat kill in the vicinity of Swan View. Small isolated populations are known from the northern jarrah forest at Toodyay (Moore *et al.* 1985) and at Boddington (Ninox Wildlife Consulting 1990). This animal is more common in the coastal, sandplain heaths of south-western Western Australia.

Common Dunnart *Sminthopsis gilberti* : trapped in Jarrah/Casuarina Site Q2 (two individuals) and Wandoo Site Q4 (one individual). Dell and How (1988) did not record this mammal during their Darling Scarp sampling.

Western Pygmy-possum *Cercartetus concinnus* : while generally common throughout much of its range, it was not recorded during the Darling Scarp study. It was captured in the JFNP survey in Wandoo Site Q4. This animal has been recorded further east at Bickley (Loaring 1954).

Yellow-footed Antechinus *Antechinus flavipes* : has been recorded during previous CALM studies in John Forrest National Park and was also recorded during this study in Granite Site Q8 and Jarrah Site Q3. All individuals trapped in spring were females with highly developed pouches but no young present, males and females were captured in autumn. The Darling Scarp study resulted in one female being captured and the W.A. Museum has one previous record from Darlington in 1979. This small marsupial is usually associated with swamps and stream zones within the main forest block and along the south-west coast. It is presumed to be extinct in the eastern part of its previous range, including the central Wheatbelt (Kitchener et al. 1980), the last recording being in 1843.

3.2.2 Rare Species:

Although no species gazetted as rare, or otherwise in need of special protection were recorded during this study, the Chuditch *Dasyurus geoffroii* has been recorded both within and in close proximity to the park. Two animals were recorded in 1985, one was reported by a Darling Range Naturalists Club member at Hovea, and the most recent specimen was a road casualty near park entrance number 3 (K.D. Morris pers. comm.).

The Darling Scarp study in 1988 (Dell and How 1988) found the Southern Brown Bandicoot *Isoodon obesulus* to be the most common animal trapped in their survey area near Lesmurdie (50 individuals in 2520 trap/nights). However, unlike the JFNP survey, sampling was carried out using cage and box traps only. Bandicoots were most frequently recorded in areas with a dense heath understorey. This type of habitat is limited in extent in JFNP and in combination with different survey objectives and trapping style, may explain the apparent scarcity of this animal in the park.

3.2.3 Introduced species

Six species of introduced mammal were recorded during this study. Only the House Mouse *Mus musculus* was widespread and common. Despite the proximity of the park to residential areas, cats *Felis catus* did not appear to be prevalent. Only one was captured (Appendix 1b).

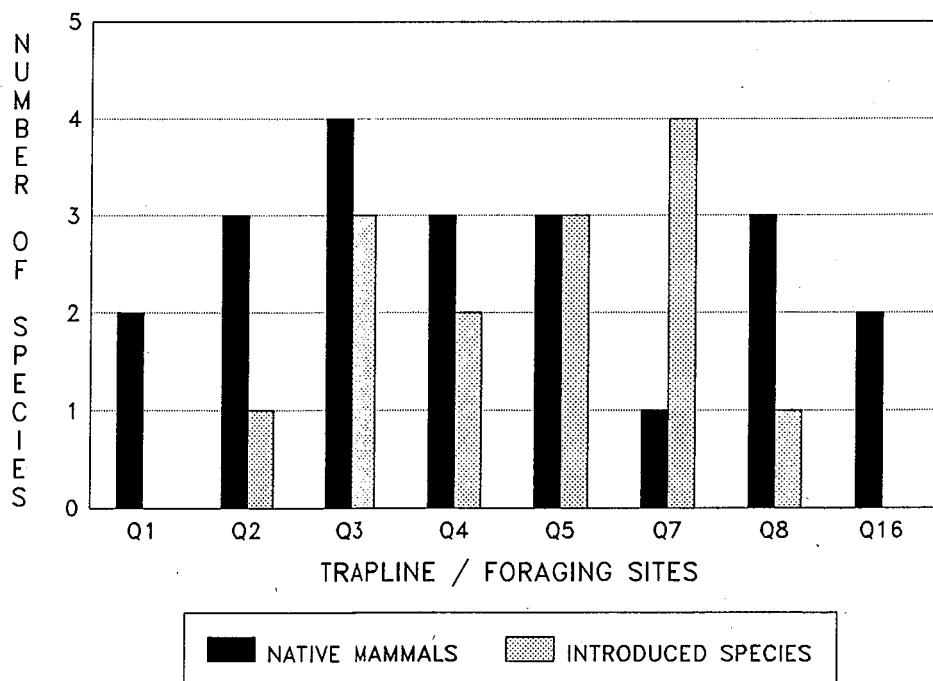

3.2.4 Other

No bats were trapped during the course of this survey. A bat trap was placed in a small creekline near Heath Site Q5 in spring where pools of water were present, potentially concentrating bats in this area. During the autumn sampling session, the bat trap was erected across Jane Brook, adjacent to Granite Site Q8 where a small pool was present. Mist nets were positioned and monitored across the upper reaches of Glen Brook Dam during the autumn survey. Although no bats were captured, two species were observed at dusk flying at tree canopy height over the mist nets.

3.2.5 Habitat Comparisons

The following graph shows the number of mammal species recorded in each unbounded quadrat. Results for both seasons have been pooled to produce an overview of species richness in habitat types; seasonal results are available in Appendix 1a. Introduced species have also been graphed.

FIGURE 5 Graph showing individual quadrat results for mammal species recorded during the John Forrest National Park surveys. Introduced species included.

3.3 Amphibians and Reptiles

Ten frogs and 23 reptiles were recorded during this survey (Appendix 1a).

3.3.1 Species of Note

Heleioporus barycragus : usually restricted to clear and turbulent, winter-flowing watercourses on granite or clay country. This type of habitat is well represented at JFNP along Jane and Glen Brooks and as a result this frog was fairly common; more so than most other Darling Range locations surveyed by the authors.

Diplodactylus spinigerus inornatus : an attractive and extremely uncommon gecko in the Darling Range where the species occurs as a population isolated from its more arid stronghold to the east.

Gehyra variegata : this gecko is almost entirely restricted to granite outcrops in the Darling Range. It is close to the south-western limits of its known range at JFNP.

Aprasia repens : a rarely recorded but fairly widespread legless lizard.

Ctenotus delli : this skink was removed from the rare list in November 1990. The JFNP record represents an individual close to the northernmost limits of the species' range.

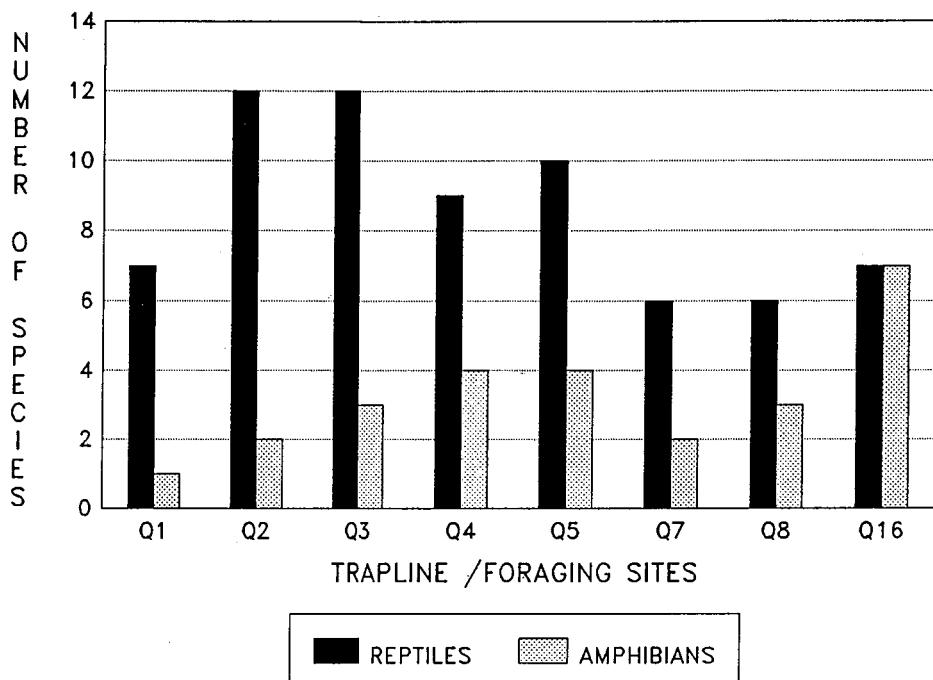

3.3.2 Rare Species

No gazetted species were captured although one rare species of snake, the Carpet Python *Morelia spilota imbricata*, is potentially present.

3.3.3 Habitat Comparisons

The following graph shows the number of amphibian and reptile species recorded in each unbounded quadrat. Results for both seasons have been pooled to produce an overview of species richness in habitat types; seasonal results are available in Appendix 1b-d.

FIGURE 6 Graph showing individual quadrat results for reptile and amphibian species recorded during the John Forrest National Park surveys.

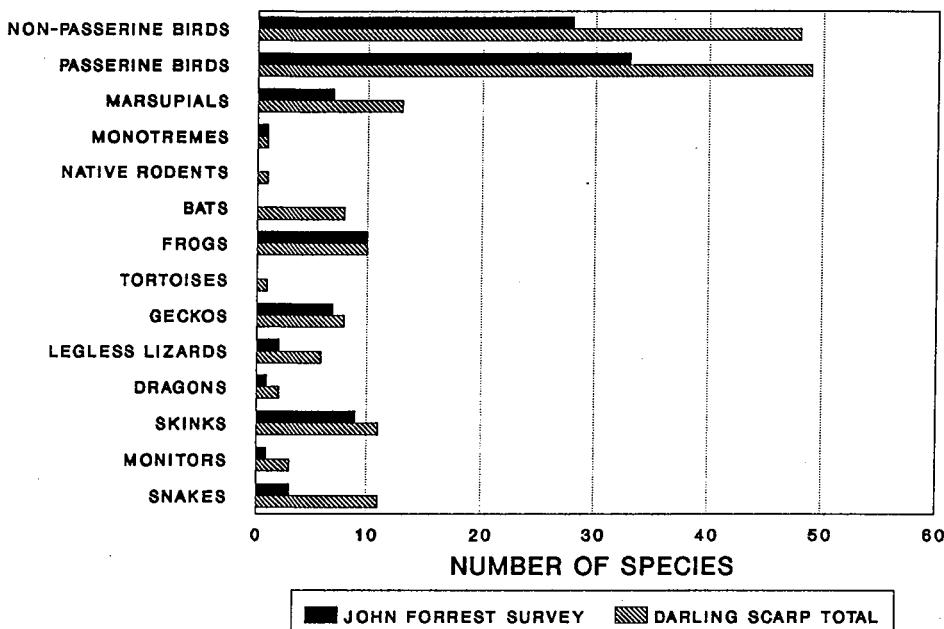

4.0 CONCLUSIONS

Drawing on W. A. Museum records and available literature, Dell (1983) considered that the Darling Scarp supported 97 species of native bird, 23 native mammals, 10 frogs and 41 reptiles. During the JFNP surveys, despite their short duration compared to the time-span which Dell's list covered, a large proportion of the Darling Scarp fauna was recorded, some 63% in all. Figure 7 compares the various faunal groups recorded in the JFNP surveys and those presented by Dell and it can be seen that certain groups were poorly represented. The absence of some species within groups does not indicate that these animals do not occur at JFNP, it is more a reflection of the vagaries of sampling, seasonality and the low numbers per unit area of larger predatory species such as raptors, dasyurids, pythons and monitors.

Given a series of sampling sessions spread over several years, it is highly likely that the number of species to be found in JFNP will be significantly higher (see Figure 2). This is already evident from casual records of species such as the Chuditch *Dasyurus geoffroii* and the extensive bird list compiled by Mr D. Briggs, one of the park rangers.

FIGURE 7 Graph comparing the John Forrest National Park survey results with the Darling Scarp species list compiled by Dell (1983).

All remaining areas of natural bushland in the Darling Range, and in particular those along the highly developed metropolitan portion of the Scarp, are of significance regardless of the type of country represented or its relative conservation value. This is a product of the amount of broad-scale clearing which has taken place since European settlement. However, two habitats in particular stand out as being of special significance at JFNP: the stream zones which traverse the park and the granite outcrop/heath complex.

Riparian habitats are considered to be important for the following reasons:

- stream zones are critical to the life cycles of several species of amphibians, fish and aquatic invertebrates;
- the deeper loamy soils favour species of reptiles which have burrowing rather than surface habits, or which are dependent on deep litter;

- the dense vegetation, higher humidity and overall productivity advantage specialised fauna such as the Yellow-footed Antechinus *Antechinus flavipes* and Southern Brown Bandicoot *Isodon obesulus*;
- in comparison to other habitats, stream zones are poorly represented per unit area, vulnerable to silting and wildfires and have undergone more adverse changes than any other habitat in the Darling Range (Dell 1983).

Granite outcrops and the adjacent heath complex are important for the following reasons:

- granite is about the only location where the geckos *Gehyra variegata* and *Underwoodisaurus milli* can be found in the ranges and although not recorded during the survey, the Ornate Dragon *Ctenophorus ornatus* is specific to outcrops with large exfoliations;
- areas of heath adjacent to granite are important to many species of Honeyeater birds which rely on this floristically rich habitat, not only for feeding, but in some cases for nesting. In addition, it is most unlikely that the Honey Possum *Tarsipes rostratus* occurs outside these heaths.

Apart from a few species of bird which have benefited from European settlement of the Darling Range e.g. Australian Magpie *Gymnorhina tibicen*, Australian Magpie-lark *Grallina cyanoleuca*, Yellow-rumped Thornbill *Acanthiza chrysorrhoa*, most have been adversely affected. Habitat-specific passerine birds have in some instances declined dramatically. Typical examples are the White-breasted Robin *Eopsaltria georgiana*, White-browed Scrubwren *Sericornis frontalis*, Red-winged Fairy-wren *Malurus elegans*, Southern Emu-wren *Stipiturus malachurus*, Tawny-crowned Honeyeater *Phylidonyris melanops*, Rufous Tree-creeper *Climacteris rufa* and Red-eared Firetail *Emblema ocularia*.

Mammals have also suffered a decline, among these being the rare and endangered Chuditch *Dasyurus geoffroii* and Southern Brown Bandicoot *Isodon obesulus*. The Brush-tailed Phascogale *Phascogale tapoatafa* and Brushtail Possum *Trichosurus vulpecula* appear to have declined over much of their former range and in the Northern Jarrah Forest at least, are rarely seen (personal observation). Species such as the Quokka *Setonix brachyurus* have disappeared entirely from the northern portions of the Darling Range and the Numbat *Myrmecobius fasciatus* is close to local extinction. The gecko *Gehyra variegata* and the dragon *Ctenophorus ornatus* are restricted to surface granite and are dependent on exfoliate slabs. Both species have declined and some populations have been exterminated on granite outcrops by removal of rock for garden decoration (Dell 1983). The combination of too frequent burning (accidental or planned), pastoral activity, damming of streams, housing development, mining and the presence of many introduced predators has resulted in a greatly modified Darling Range environment and a marked decline in fauna populations.

The most important local significance of areas such as John Forrest National Park is that they have the capacity to act as refuges for species which have long since disappeared from the adjacent Swan Coastal Plain or are under localised or widespread pressure. Despite its close proximity to the Perth Metropolitan area, the high conservation value of John Forest National Park cannot be overstated, particularly when viewed in the perspective of the continuing attrition of fauna habitats not only on the coastal plain and the Darling Range, but throughout most of south-western Western Australia.

KEY TO APPENDICES

Vegetation associations sampled at John Forrest National Park in spring 1990 and autumn 1991.

- Site 1 (Q1) Powderbark Wandoo, *Eucalyptus accedens*, - Wandoo *Eucalyptus wandoo* woodland over heath.
- Site 2 (Q2) Jarrah, *Eucalyptus marginata* - Sheoak, *Allocasuarina fraseriana* forest.
- Site 3 (Q3) Jarrah, *E. marginata* - Marri, *Eucalyptus calophylla* forest.
- Site 4 (Q4) Wandoo, *E. wandoo* - Powderbark Wandoo, *E. accedens* woodland.
- Site 5 (Q5) Mixed Proteaceae - Myrtaceae heath.
- Site 7 (Q7) *Agonis linearifolia* creekline.
- Site 8 (Q8) Granite outcrop.
- Site 16 (Q16) Yarri, *Eucalyptus patens* woodland.

* = Rare, or otherwise in need of special protection.

T = Birds listed by the Japan/Australia (JAMBA) and China/Australia (CAMBA) treaties for the protection of migratory species and their environment.

I = Introduced species.

X = Recorded.

APPENDIX 1a

List of vertebrate species recorded during winter (reconnaissance, trapline establishment), spring (sampling) and autumn (sampling) in John Forrest National Park, 1990/91.

SEASON		WINTER	SPRING	AUTUMN
BIRD SPECIES				
PODICIPEDIDAE				
	<i>Tachybaptus novaehollandiae</i> , Australasian Grebe	X	-	X
PHALACROCORACIDAE				
	<i>Phalacrocorax melanoleucos</i> , Little Pied Cormorant	-	-	X
ARDEIDAE				
	<i>Ardea novaehollandiae</i> , White-faced Heron	-	-	X
ANATIDAE				
	<i>Tadorna tadornoides</i> , Australian Shelduck	X	X	-
	<i>Anas superciliosa</i> , Pacific Black Duck	X	-	X
	<i>Chenonetta jubata</i> , Maned Duck	-	X	X
ACCIPITRIDAE				
	<i>Accipiter fasciatus</i> , Brown Goshawk	-	-	X
	<i>A. cirrhocephalus</i> , Collared Sparrowhawk	X	-	-
	<i>Hieraetus morphnoides</i> , Little Eagle	X	-	-
TURNICIDAE				
	<i>Turnix varia</i> , Painted Button-quail	-	-	X
RALLIDAE				
	<i>Rulica atra</i> , Eurasian Coot	-	-	X
COLUMBIDAE				
	<i>Streptopelia chinensis</i> , Spotted Turtle-Dove I	X	X	-
	<i>Phaps chalcoptera</i> , Common Bronzewing	X	X	X
CACATUIDAE				
	<i>Calyptorhynchus magnificus</i> , Red-tailed Black-Cockatoo	-	-	X
	<i>C. f. latirostris</i> , White-tailed Black-Cockatoo *	X	X	X
	<i>Cacatua roseicapilla</i> , Galah	X	X	X
POLYTELITIDAE				
	<i>Polytelis anthopeplus</i> , Regent Parrot	-	X	-
PLATYCERCIDAE				
	<i>Purpureicephalus spurius</i> , Red-capped Parrot	X	X	X
	<i>Platycercus icterotis</i> , Western Rosella	-	X	X
	<i>Barnardius zonarius</i> , Port Lincoln Ringneck	X	X	X
	<i>Neophema elegans</i> , Elegant Parrot	X	X	-
CUCULIDAE				
	<i>Cuculus pallidus</i> , Pallid Cuckoo	X	-	-
	<i>C. pyrrhophanus</i> , Fan-tailed Cuckoo	X	X	-
	<i>Chrysococcyx basalis</i> , Horsfield's Bronze-Cuckoo	X	X	-
	<i>C. lucidus</i> , Shining Bronze-Cuckoo	X	X	-
STRIGIDAE				
	<i>Ninox novaeseelandiae</i> , Southern Boobook	-	X	-
PODARGIDAE				
	<i>Podargus strigoides</i> , Tawny Frogmouth	-	-	X
ALCEDINIDAE				
	<i>Dacelo novaeguineae</i> , Laughing Kookaburra I	X	X	X
	<i>Halcyon sancta</i> , Sacred Kingfisher	-	X	-
MEROPIDAE				
	<i>Merops ornatus</i> , Rainbow Bee-eater T	-	X	-
HIRUNDINIDAE				
	<i>Cecropis nigricans</i> , Tree Martin	X	X	X
CAMPETHAGIDAE				
	<i>Coracina novaehollandiae</i> , Black-faced Cuckoo-shrike	X	X	X
	<i>C. maxima</i> , Ground Cuckoo-shrike	-	-	X

APPENDIX 1a - Continued

SEASON		WINTER	SPRING	AUTUMN
MUSCICAPIDAE				
<i>Petroica multicolor</i> , Scarlet Robin	X	X	X	
<i>P. goodenovii</i> , Red-capped Robin	X	-	-	
<i>Pachycephala pectoralis</i> ,				
Golden Whistler	X	X	X	X
<i>P. rufiventris</i> , Rufous Whistler	X	X	X	X
<i>Colluricinclla harmonica</i> ,				
Grey Shrike-thrush	X	X	X	X
<i>Rhipidura fuliginosa</i> , Grey Fantail	X	X	X	X
MALURIDAE				
<i>Malurus splendens</i> ,				
Splendid Fairy-wren	X	X	X	
ACANTHIZIDAE				
<i>Sericornis frontalis</i> ,				
White-browed Scrubwren	-	-	-	X
<i>Smicrornis brevirostris</i> , Weebill	X	X	X	X
<i>Gerygone fusca</i> , Western Gerygone	X	X	X	X
<i>Acanthiza apicalis</i> , Inland Thornbill	X	X	X	X
<i>A. inornata</i> , Western Thornbill	X	X	X	X
<i>A. chrysorrhoa</i> ,				
Yellow-rumped Thornbill	-	X	X	
NEOSITTIDAE				
<i>Daphoenositta chrysoptera</i> ,				
Varied Sittella	-	X	X	X
CLIMACTERIDAE				
<i>Climacteris rufa</i> , Rufous Treecreeper	X	X	X	X
MELIPHAGIDAE				
<i>Anthochaera carunculata</i> ,				
Red Wattlebird	X	X	X	X
<i>Melithreptus lunatus</i> ,				
White-naped Honeyeater	X	X	X	X
<i>Lichenura indistincta</i> ,				
Brown Honeyeater	X	X	X	X
<i>Phylidonyris novaehollandiae</i> ,				
New Holland Honeyeater	X	X	X	X
<i>Acanthorhynchus superciliosus</i> ,				
Western Spinebill	X	X	X	X
DICAEIDAE				
<i>Dicaeum hirundinaceum</i> , Mistletoebird	X	-	-	-
PARDALOTIDAE				
<i>Pardalotus punctatus</i> ,				
Spotted Pardalote	X	-	-	-
<i>P. striatus</i> , Striated Pardalote	X	X	X	X
ZOSTEROPIDAE				
<i>Zosterops lateralis</i> , Silvereye	X	X	X	X
GRALLINIDAE				
<i>Grallina cyanoleuca</i> ,				
Australian Magpie-lark	X	-	-	X
ARTAMIDAE				
<i>Artamus cyanopterus</i> ,				
Dusky Woodswallow	-	-	-	X
CRACTICIDAE				
<i>Cracticus torquatus</i> , Grey Butcherbird	X	X	X	X
<i>Gymnorhina tibicen</i> , Australian Magpie	X	X	X	X
<i>Strepera versicolor</i> , Grey Currawong	X	-	-	-
CORVIDAE				
<i>Corvus coronoides</i> , Australian Raven	X	X	X	X
MAMMAL SPECIES				
TACHYGLOSSIDAE				
<i>Tachyglossus aculeatus</i> ,				
Short-beaked Echidna	X	X	X	X
DASYURIDAE				
<i>Antechinus flavipes</i> ,				
Yellow-footed Antechinus	-	X	X	X
<i>Sminthopsis gilberti</i> , Common Dunnart	-	-	-	X
PERAMELIDAE				
<i>Isodon obesulus</i> ,				
Southern Brown Bandicoot *	X	-	-	-
BURRAMYIDAE				
<i>Cercartetus concinnus</i> ,				
Western Pygmy-possum	-	-	-	X
TARSIPEDIDAE				
<i>Tarsipes rostratus</i> ,				
Honey-possum	-	X	X	X

APPENDIX 1a - Continued

SEASON		WINTER	SPRING	AUTUMN
MACROPODIDAE				
<i>Macropus irma</i> , Western Brush Wallaby		-	X	-
<i>M. fuliginosus</i> , Western Grey Kangaroo		X	X	X
MURIDAE				
<i>Rattus rattus</i> , Black Rat I		-	-	X
<i>Mus musculus</i> , House Mouse I		-	X	X
LEPORIDAE				
<i>Oryctolagus cuniculus</i> , Rabbit I		X	X	X
CANIDAE				
<i>Vulpes vulpes</i> , Fox I		X	X	X
FELIDAE				
<i>Felis catus</i> , Feral Cat I		-	X	-
SUIDAE				
<i>Sus scrofa</i> , Feral Pig I		X	-	-
AMPHIBIAN AND REPTILE SPECIES				
LEPTODACTYLIDAE	Frogs			
<i>Crinia georgiana</i>		X	X	-
<i>C. glauerti</i>		X	X	-
<i>C. pseudinsignifera</i>		X	X	X
<i>Heleioporus barycragus</i>		-	X	X
<i>H. inornatus</i>		-	-	X
<i>H. psammophilus</i>		-	-	X
<i>Litoria dentata</i>		-	X	X
<i>Pseudophryne guentheri</i>		-	X	X
HYLIDAE	Frogs			
<i>Litoria adelaidensis</i>		X	X	X
<i>L. moorei</i>		-	X	X
GEKKONIDAE	Geckos			
<i>Crenadactylus o. ocellatus</i>		X	X	X
<i>Diplodactylus g. granariensis</i>		X	X	-
<i>D. polycophthalmus</i>		X	X	X
<i>D. spinigerus</i>		-	-	X
<i>Gehyra variegata</i>		-	X	X
<i>Phyllodactylus m. marmoratus</i>		X	-	-
<i>Underwoodisaurus milii</i>		-	X	-
PYGOPODIDAE	Legless Lizards			
<i>Aprasia pulchella</i>		-	X	-
<i>A. repens</i>		X	X	-
AGAMIDAE	Dragon Lizards			
<i>Pogona m. minor</i>		-	X	X
SCINCIDAE	Skinks			
<i>Cryptoblepharus plagioccephalus</i>		X	X	X
<i>Ctenotus deli</i>		-	X	-
<i>C. labillardieri</i>		-	-	X
<i>Hemiergis i. initialis</i>		X	X	X
<i>Leiolopisma trilineatum</i>		-	X	X
<i>Lerista distinguenda</i>		X	X	-
<i>Menetia greyii</i>		-	-	X
<i>Morethia obscura</i>		-	X	X
<i>Tiliqua r. rugosa</i>		X	X	X
VARANIDAE	Monitors			
<i>Varanus gouldii</i>		-	X	-
TYPHLOPIDAE	Blind Snakes			
<i>Ramphotyphlops australis</i>		X	X	X
ELAPIDAE	Elapid Snakes			
<i>Pseudonaja a. affinis</i>		-	X	-
<i>Rhinoplocephalus gouldii</i>		X	X	X

APPENDIX 1b

List of vertebrate species recorded in winter 1990 (reconnaissance, trapline establishment), in John Forrest National Park sampling sites.

OP = Opportunistic sampling in various habitats (see data printouts).

ADDENDUM TO FAUNA SURVEY

The following notes refer to additional records of mammals in and near John Forrest National Park.

Isoodon obesulus (Southern Brown Bandicoot) - a dead juvenile was found in nearby Greenmount National Park in June 1989 (K.D. Morris pers. comm.).

Macropus robustus (Euro) - recorded in John Forrest National Park by Morris and Bromilow (1991).

Canis familiaris (Domestic Dog) - sometimes seen in the Park during the early morning, presumably having wandered in from adjacent suburban areas (K.D. Morris pers. comm.).

Felis catus (Feral Cat) - although recorded rarely during the present survey, at some times they are more common, such as in June 1989 when K.D. Morris and R.N. Bromilow (pers. comm.) recorded up to three per night in the facilities area.

Capra hircus (Feral Goat) - patchily distributed in the Darling Range, but only one sighting on the scarp in John Forrest National Park in June 1989 (K.D. Morris and R.N. Bromilow pers. comm.).

VEGETATION SURVEY

**DATA COLLECTED BY
E.M. MATTISKE AND ASSOCIATES**

VEGETATION SURVEY

E. M. Mattiske and Associates
and Allan H. Burbidge

INTRODUCTION

The work reported on herein forms part of an integrated survey of vascular plants and vertebrate animals of John Forrest National Park and the adjacent Red Hill area (see Burbidge, this report, and Ninox Wildlife Consulting, this report). The major aim of the botanical aspects of this project was to obtain base-line data on floristic composition and vegetation structure of the main site-vegetation types within the study area.

METHODS

Following a reconnaissance during which most tracks in the area were traversed, 16 sites were chosen to represent the diversity of the major site-vegetation types identified (Table 3, Figure 8). At each site, a 10 x 10 m plot was permanently marked and sub-divided into 25 quadrats each 2 x 2 m. Species presence was recorded for each quadrat. Observations were also made outside the plots to compile species inventory lists for each site. In addition, all trees within the 10 x 10 m plots were tagged and the following recordings made:

- 1) diameter at breast height (cm) of each stem,
- 2) condition and health of each stem (based on a scale applied in other Jarrah forest areas), and
- 3) comments on epicormic growth, insect infestations and possible causes of stress for each stem where appropriate.

For each site, a record of soil type/substrate was made, and the vegetation structure described according to the system of Muir (1977).

All data presented in this section were collected by E.M. Mattiske and Associates.

RESULTS AND DISCUSSION

The number of vascular plant species at each two hectare site varied from 24 to 92 (mean 65), with 21 to 81 (mean 54) being recorded within the 10 x 10 m plots (Table 4). The species richness in plots 3 and 12 was as rich as that recorded in the species rich northern and southern sand heaths (Hopkins and Griffin 1984). Tree data are presented in Appendix A, understorey data in Appendix B and vegetation, soil and topography descriptions in Appendix C.

Very few weeds were found in any of the sample sites except site 8, which, because of its open nature, had more weeds than other sites. Nevertheless, for such an open area, it was not badly affected by weeds. Most weeds in the study area occur in disturbed areas along the old railway line in the national park and in the regenerating areas in the Red Hill area. Weeds in the park have been the subject of separate investigations (G.J. Keighery, unpubl.).

Table 3: Plant community and substrate of each of the 16 sites. For further detail see Appendix C. Plot numbers marked with an asterisk are sites where pit-fall traps were established for zoological sampling.

Plot	Plant community and substrate
1*	Woodland of <i>Eucalyptus accedens</i> - <i>Eucalyptus wandoo</i> on clay-loams
2*	Open forest of <i>Eucalyptus marginata</i> - <i>Allocasuarina fraseriana</i> on sandy gravels over shallow caprock
3*	Woodland of <i>Eucalyptus marginata</i> - <i>Eucalyptus calophylla</i> on sand-gravels
4*	Woodland of <i>Eucalyptus accedens</i> - <i>Eucalyptus wandoo</i> on clay-loams
5*	Closed heath of mixed Myrtaceae - Proteaceae species on Darling Scarp dolerites
6	Closed heath of mixed Myrtaceae - Proteaceae species on Darling Scarp dolerites
7	Tall shrubland of <i>Agonis linearifolia</i> on side upper gully and creek line
8	Herbfield on exposed granite outcrop
9	Open heath on exposed granite outcrop
10	Woodland of <i>Eucalyptus accedens</i> - <i>Eucalyptus wandoo</i> on clay-loams
11	Open forest of <i>Eucalyptus marginata</i> - <i>Eucalyptus calophylla</i> with dominant second storey layer of <i>Banksia grandis</i> on sandy gravels
12	Open forest of <i>Eucalyptus marginata</i> - <i>Allocasuarina fraseriana</i> on sandy gravels over shallow caprock
13	Woodland of <i>Eucalyptus calophylla</i> - <i>Eucalyptus marginata</i> on clay-loams over shallow secondary lateritization
14	Woodland of <i>Eucalyptus patens</i> - <i>Eucalyptus wandoo</i> on sandy loams in creek bed
15	Woodland of <i>Melaleuca preissiana</i> - <i>Banksia littoralis</i> on wet clay-loams
16*	Woodland of <i>Eucalyptus patens</i> on sandy loams on lower valley slopes

Table 4: The number of vascular plant species recorded in each of the plots and at each site (plot plus surrounding two hectares).

SCALE 1:25000

KEY TO CODES USED IN APPENDICES

Appendix A: Tree and stem condition rating.

- 0 = healthy, no dead leaves
- 1 = occasional dead leaves
- 2 = epicormic shoots (therefore stressed)
- 3 = tips of branches stressed or dying
- 4 = entire or whole branches dying or dead (NB some lower branches excluded from this assessment)
- 5 = more than half tree dead
- 6 = tree dead

Additional comments add extra information and differentiate between recent and old deaths.

Appendix B: Characteristics of understorey components.

- + = present in specified 2 x 2 m quadrat
- = not recorded in specified 2 x 2 m quadrat
- B = plant(s) in bud
- D = plant(s) dead
- F = plant(s) in flower
- Ft = plant(s) in fruit
- G = plant(s) grazed
- P = pink flowers
- S = plant(s) stressed
- Se = seedling(s) present
- VS = very sick/stressed
- W = white flowers

B. grandis	11-15	1	2.1	2	
B. grandis	11-16	1	7.2	2	
E. marginata	11-17	1	46.2	2	Stem Borers, Epicormic Growth
E. calophylla	11-18	1	25.5	1	
B. grandis	11-19	1	6.3	1	
		2	10.2	1	

APPENDIX A: SUMMARY OF TREE DATA ON PERMANENT VEGETATION MONITORING PLOTS, JOHN FORREST NATIONAL PARK, AUGUST-SEPTEMBER, 1990.

Plot No.: 12 Date: 23.8.90
Jarrah - Sheoak Open Forest.

Species	Tree No.	Stem No.	DBH (cm)	Condition	Comments.
<hr/>					
A. fraseriana	12-1	1	39.8	3	Burnt Heart, Branch tips dead.
E. marginata	12-2	1	12.4	2	Leaf Miner
A. fraseriana	12-3	1	3.5	0	
		2	4.8	0	
		3	3.5	0	
	(plus 1 broken stem)				
A. fraseriana	12-4	1	5.1	1	Lost bark
		2	5.0	1	
		3	3.7	0	
E. marginata	12-5	1	5.2	2	Leaf Miner
		2	1.5	2	Leaf Miner

Plot No.: 13 Date: 24.8.90
Marri Open Woodland.

Species	Tree No.	Stem No.	DBH (cm)	Condition	Comments.
<hr/>					
E. calophylla	13-1	1	13.2	0	

Plot No.: 14 Date: 23.8.90
Marri - Wandoo - Yarri Woodland.

Species	Tree No.	Stem No.	DBH (cm)	Condition	Comments.
<hr/>					
E. calophylla	14-1	1	21.1	2	
E. wandoo	14-2	1	14.0	1	
E. wandoo	14-3	1	11.0	2	Insects
E. calophylla	14-4	1	<1.0	0	

APPENDIX A: SUMMARY OF TREE DATA ON PERMANENT VEGETATION MONITORING PLOTS, JOHN FORREST NATIONAL PARK, AUGUST-SEPTEMBER, 1990.

Plot No.: 15 Date: 24.8.90
 Paperbark - Banksia Woodland (and occasional *Acacia saligna*)

Species	Tree No.	Stem No.	DBH (cm)	Condition	Comments.
---------	----------	----------	-------------	-----------	-----------

<i>E. calophylla</i>	15-1	1	47.8	1	
<i>M. preissiana</i>	15-2	1	18.2	2	Stem Borers
<i>B. littoralis</i>	15-3	1	12.9	1	
		2	6.2	1	
		3	16.9	1	Leaning Stem
<i>B. littoralis</i>	15-4	1	17.9	1	
		2	58.9	1	

Plot No.: 16 Date: 24.8.90
 Yarri Woodland.

Species	Tree No.	Stem No.	DBH (cm)	Condition	Comments.
---------	----------	----------	-------------	-----------	-----------

<i>E. patens</i>	16-1	1	22.0	1	
		2	11.7	2	
		3	11.6	1	
		4	12.1	1	
		5	<1.0	0	
<i>E. patens</i>	16-2	1	3.3	1	
		2	4.6	6	Old Death
		3	2.8	1	
<i>E. patens</i>	16-3	1	17.5	3	Burnt, Upper Brs. Dead
		2	11.2	1	"
		3	21.2	3	"
		4	16.8	1	"
		5	14.5	1	"
					(one dead old stump in middle of 16-3)
<i>E. patens</i>	16-4	1	6.2	1	
<i>E. patens</i>	16-5	1	9.8	2	
		2	6.3	1	
		3	3.2	6	Old Death
					(one old stump at base)

Additional Species in Plot 16

- Acacia extensa
- Acacia nervosa
- Gastrolobium calycinum
- Hakea cristata
- Lechenaultia biloba
- Oxylobium capitatum
- Petrophile striata
- Pimelea suaveolens
- Trymalium floribundum
- Trymalium ledifolium
- Verticordia sp.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 1****Key Description:**

Low Woodland A over Open Low Scrub B over Open Dwarf Scrub C
over Low Heath D over Very Open Herbs.

Code:

eLAI. xSBr. xSCR. xSDc. xJr.

Location Details:

Stratum 1. *Eucalyptus accedens*, *Eucalyptus wandoo*, *Eucalyptus marginata* and *Eucalyptus calophylla*, 6-14m tall, 10-35% canopy cover. Average foliage density 25%.

Stratum 2. *Hakea lissocarpha*, *Xanthorrhoea preissii*, 1-1.5m tall, 8-10% canopy cover. Average foliage density 10%.

Stratum 3. *Hakea lissocarpha*, *Hibbertia hypericoides* and *Xanthorrhoea preissii*, 0.5-1m tall, 5-10% canopy cover. Average foliage density 8%.

Stratum 4. *Dryandra nivea*, *Dryandra bipinnatifida*, *Gompholobium polymorphum*, *Baeckea camphorosmae* and *Bossiaea eriocarpa*, less than 0.5m tall, 35-40% canopy cover. Average foliage density 35%.

Stratum 5. Mixed Herbaceous species, less than 0.2m tall, 2-4% canopy cover. Average foliage density 2%.

Comments: Litter mainly around shrubs and trees, varying from 1 to 2 cm.

Soils & Topography: Red to caramel-red clays with occasional outcropping on upper slopes and ridges.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 2.

Key Description:

Open Woodland over Low Forest A over Dwarf Scrub C over Open Dwarf Scrub D over Open Low Sedges over Very Open Herbs.

Code:

eMr. xLAc. xSCi. xSDr. cVLi. xJr.

Location Details:

Stratum 1. *Eucalyptus marginata* and *Eucalyptus calophylla*, 15-18m tall, 1-2% canopy cover. Average foliage density 2%.

Stratum 2. *Allocasuarina fraseriana*, *Eucalyptus marginata*, *Eucalyptus calophylla* and *Banksia grandis*, 5-12m tall, 30-35% canopy cover. Average foliage density 30%.

Stratum 3. *Grevillea wilsonii*, *Xanthorrhoea preissii* and *Xanthorrhoea gracilis*, 0.5-1m tall, 10-12% canopy cover. Average foliage density 12%.

Stratum 4. *Dryandra nivea*, *Bossiaea ornata*, *Adenantheros barbigerus*, *Grevillea wilsonii* and *Gompholobium preissii*, less than 0.5m tall, 2-5% canopy cover. Average foliage density 4%.

Stratum 5. Mixed sedge species, *Mesomelaena graciliceps* and *Lepidosperma spp.*, less than 0.5m tall, 20-30% canopy cover. Average foliage density 25%.

Stratum 6. Mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 2%.

Comments: Bare ground less than 10%, most of soil covered by 1-5cm thick litter of Sheoak needles and *Banksia grandis* leaves.

Soils & Topography: Sandy gravels over shallow lateritic outcrops on mid to upper slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 3.****Key Description:**

Open Woodland over Low Forest A over Open Low Scrub A over Open Low Scrub B over Open Low Heath C over Dwarf Scrub D over Very Open Herbs.

Code:

eMr. eLAc. xSAr. xSBr. xSCc. xSDi. xJr.

Location Details:

Stratum 1. *Eucalyptus calophylla*, 20-25m tall, 3-5% canopy cover. Average foliage density 5%.

Stratum 2. *Eucalyptus marginata* and *Eucalyptus calophylla* 5-15m tall, 30-35% canopy cover. Average foliage density 30%.

Stratum 3. *Xanthorrhoea preissii* 1.5-2m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 4. *Xanthorrhoea preissii* and *Isopogon sphaerocephalus*, 1-1.5m tall, 3-5% canopy cover. Average foliage density 5%.

Stratum 5. *Xanthorrhoea preissii*, *Leucopogon nutans*, *Isopogon sphaerocephalus* and *Hibbertia hypericoides*, 0.5-1m tall, 30-40% canopy cover. Average foliage density 35%.

Stratum 6. *Dryandra nivea*, *Eriostemon spicatus*, *Bossiaea ornata*, *Gompholobium marginatum* and *Hibbertia commutata*, less than 0.5m tall, 10-20% canopy cover. Average foliage density 15%.

Stratum 7. Mixed Herbaceous species, *Conostylis spp.* and *Stylium spp.*, less than 0.2m tall, 1-2% canopy cover. Average foliage density 2%.

Comments: Bare ground patchy. Litter largely around bases of shrubs and trees. Litter depth variable from 1cm to 6cm.

Soils & Topography: Sandy-gravels associated with lateritic outcropping on slopes and ridges.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 4.

Key Description:

Open Woodland over Low Woodland A over Open Low Woodland B over Open Low Scrub B over Open Drawf Scrub C over Dwarf Scrub D over Very Open Herbs.

Code:

eMr. eLAI. eLBr. xSBr. xSCR. xSDi. xJr.

Location Details:

Stratum 1. *Eucalyptus accedens* and *Eucalyptus wandoo*, 15-20m tall, 2-10% canopy cover. Average foliage density 10%.

Stratum 2. *Eucalyptus accedens* and *Eucalyptus wandoo*, 8-14m tall, 5-25% canopy cover. Average foliage density 15%.

Stratum 3. *Eucalyptus accedens* and *Eucalyptus wandoo*, 3-8m tall, 5-30% canopy cover. Average foliage density 10%.

Stratum 4. *Hakea lissocarpa*, *Acacia pulchella* var. *pulchella*, *Macrozamia riedlei* and *Xanthorrhoea preissii* 1-1.5m tall, 2-8% canopy cover. Average foliage density 4%.

Stratum 5. *Hakea lissocarpa*, *Acacia pulchella* var. *pulchella*, *Macrozamia riedlei* and *Xanthorrhoea preissii*, 0.5-1m tall, 5-10% canopy cover. Average foliage density 5%.

Stratum 6. *Dryandra nivea*, *Hypocalymma angustifolium*, *Hakea lissocarpa* and *Hibbertia hypericoides*, less than 0.5m tall, 10-30% canopy cover. Average foliage density 15%.

Stratum 7. *Conostylis spp.*, *Borya sphaerocephala* and mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 2%.

Comments: Bare ground patchy, litter to 2-3cm around shrubs and trees.

Soils & Topography: Shallow red to pink-caramel clay soils on breakaway areas on upper slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 5. (Fauna Plot near Vegetation Plot)

Key Description:

Open Woodland over Open Low Woodland A over Open Low
 Woodland B over Heath B over Dwarf Scrub C over Open Dwarf
 Scrub D over Very Open Herbs.

Code:

eMr. eLAr. eLBr. xSBc. xSCi. xSDr. xJr.

Location Details:

Stratum 1. *Eucalyptus wandoo*, 15m tall, 1-2% canopy cover.
 Average foliage density 1%.

Stratum 2. *Eucalyptus wandoo* and *Eucalyptus calophylla*, 5-8m
 tall, 3-5% canopy cover. Average foliage density 5%.

Stratum 3. *Eucalyptus wandoo* and *Eucalyptus calophylla*, 2-5m
 tall, 1-2% canopy cover. Average foliage density 2%.

Stratum 4. *Hakea lissocarpha*, *Acacia pulchella*, *Hypocalymma angustifolium* and *Xanthorrhoea preissii* 1-1.5m tall, 2-40% canopy cover. Average foliage density 40%.

Stratum 5. *Calothamnus quadrifidus*, *Hibbertia hypericoides*, *Hakea incrassata*, *Hakea lissocarpha* and *Grevillea bipinnatifida*, 0.5-1m tall, 20-60% canopy cover. Average foliage density 30%.

Stratum 6. *Dryandra nivea* and other *Proteaceae spp.*, less than 0.5m tall, 2-10% canopy cover. Average foliage density 8%.

Stratum 7. *Borya sphaerocephala* and other Herbaceous species, less than 0.2m tall, 1-4% canopy cover. Average foliage density 3%.

Comments: Bare ground patchy. Litter largely around shrubs.

Soils & Topography: Dolerite dykes, exposed outcrops, red clay soils.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 5. (Vegetation Plot)****Key Description:**

Open Low Scrub A over Heath B over Dwarf Scrub C over Very Open Herbs.

Code:

xSAr. xSBc. xSCi. xJr.

Location Details:

Stratum 1. *Calothamnus quadrifidus*, 1.5-2m tall, 10% canopy cover. Average foliage density 10%.

Stratum 2. *Acacia pulchella*, *Calothamnus quadrifidus*, *Trymalium ledifolium*, *Hibbertia hypericoides*, *Xanthorrhoea preissii* and *Macrozamia riedlei*, 1-1.5m tall, 65-70% canopy cover. Average foliage density 68%.

Stratum 3. *Calothamnus quadrifidus*, *Grevillea bipinnatifida* and *Trymalium ledifolium*, 0.5-1m tall, 30% canopy cover. Average foliage density 30%.

Stratum 4. *Borya sphaerocephala* and other Herbaceous species, less than 0.2m tall, 10% canopy cover. Average foliage density 10%.

Comments: Differs from Fauna traplines due to absence of Tree and Saplings in Vegetation Plot.

Soils & Topography: Dolerite dykes, exposed rock, red clay soils.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 6.****Key Description:**

Open Low Woodland A over Heath A over Low Scrub B over Open Dwarf Scrub C over Open Dwarf Scrub D over Very Open Low Sedges over Very Open Herbs.

Code:

eLAr. xSAc. xSBi. xSCr. xSDr. cVLr. xJr.

Location Details:

Stratum 1. *Eucalyptus calophylla* and *Eucalyptus marginata*, 8-15m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 2. *Santalum acuminatum*, *Calothamnus quadrifidus*, *Hakea erinacea* and *Grevillea endlicheriana*, 1.5-2m tall, 40-45% canopy cover. Average foliage density 40%.

Stratum 3. *Trymalium ledifolium*, *Calothamnus quadrifidus*, *Xanthorrhoea preissii* and *Hakea erinacea*, 1-1.5m tall, 25-30% canopy cover. Average foliage density 25%.

Stratum 4. *Calothamnus quadrifidus*, *Hibbertia hypericoides*, *Leucopogon propinquus* and *Grevillea bipinnatifida*, 0.5-1m tall, 4-5% canopy cover. Average foliage density 5%.

Stratum 5. *Dryandra nivea*, *Hibbertia commutata*, *Gompholobium marginatum*, *Astroloma pallidum* and *Baeckea comphorosmae*, less than 0.5m tall, 2-3% canopy cover. Average foliage density 2%.

Stratum 6. *Lepidosperma spp.*, less than 0.5m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 7. Mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 1%.

Comments: Bare ground and bare rock - 10%, litter largely around bases of shrubs and trees, 1-2cm deep.

Soils & Topography: Clays associated with outcrops on mid to upper slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 7.

Key Description:

Low Forest A over Dense Thicket over Tall Sedges over Open
Dwarf Scrub B over Dwarf Scrub C over Low Heath D over Very
Open Herbs.

Code:

eLAc. aSd. cVTc. xSBr. xSCR. xSDc. xJr.

Location Details:

Stratum 1. *Eucalyptus marginata* and *Eucalyptus calophylla*, 5-10m tall, 30-40% canopy cover. Average foliage density 35%.

Stratum 2. *Agonis linearifolia*, 2-6m tall, 70-80% canopy cover. Average foliage density 75%.

Stratum 3. *Lepidosperma tetraquetrum*, 1.5-2m tall, 25-80% canopy cover. Average foliage density 60%.

Stratum 4. *Macrozamia riedlei*, *Xanthorrhoea preissii* and *Agonis linearifolia*, 0.5-1m tall, 1-2% canopy cover. Average foliage density 2%.

Stratum 5. *Agonis linearifolia* and *Acacia pulchella*, 1-1.5m tall, 4-5% canopy cover. Average foliage density 5%.

Stratum 6. *Bossiaea ornata*, *Hakea lissocarpha*, *Hovea trisperma* and *Chorizema ilicifolium*, less than 0.5m tall, 35-40% canopy cover. Average foliage density 37%.

Stratum 7. Mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 1%.

Comments: Litter variable from 1cm to 4cm.

Soils & Topography: Side gully, swampy, seasonally wet.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 8.****Key Description:**

Open Herbs over Mosses and Liverworts.

Code:

xJi. xXc

Location Details:

Stratum 1. Mixed Herbaceous Species dominated by members of Asteraceae family, less than 0.05m tall, 10-30% canopy cover. Average foliage density 20%.

Stratum 2. Mixed Moss and Lichen Species, less than 0.02m tall, 30-40% canopy cover. Average foliage density 35%.

Comments: Granite rock covers most of plot, litter only minor, less than 0.1cm in depth.

Soils & Topography: Localized patches of sand in small pockets over exposed granite rock.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 9.****Key Description:**

Open Low Scrub A over Open Low Scrub B over Dwarf Scrub C over Dwarf Scrub D over Open Low Sedges over Very Open Herbs.

Code:

xSAr. xSBr. xSCI. xSDi. cVLi. xJr.

Location Details:

Stratum 1. *Hakea undulata*, *Hakea cristata* and *Grevillea pilulifera*, 1.5-2m tall, 2-3% canopy cover. Average foliage density 3%.

Stratum 2. *Xanthorrhoea preissii*, *Allocasuarina humilis*, *Hakea undulata* and *Grevillea bipinnatifida*, 1-1.5m tall, 4-5% canopy cover. Average foliage density 5%.

Stratum 3. *Hakea undulata*, *Allocasuarina humilis*, *Acacia pulchella* var. *pulchella* and *Grevillea bipinnatifida*, 0.5-1m tall, 20-30% canopy cover. Average foliage density 25%.

Stratum 4. *Hibbertia hypericoides*, *Bossiaea eriocarpa*, *Baeckea camphorosmae*, *Leucopogon ?pulchellus* and *Melaleuca scabra*, less than 0.5m tall, 20-30% canopy cover. Average foliage density 25%.

Stratum 5. Mixed sedge species, *Lepidosperma spp.* less than 0.3m tall, 15-25% canopy cover. Average foliage density 20%.

Stratum 6. Mixed Herbaceous species less than 0.2m tall, less than 10% canopy cover. Average foliage density 8%.

Comments: Bare ground 10-25%, patchy. Litter largely around base of plants.

Soils & Topography: Shallow gritty sandy soils associated with granite outcrops, located on lower and mid slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 10.****Key Description:**

Open Low Woodland A over Open Low Woodland B over Open Low Scrub A over Open Low Scrub B over Open Dwarf Scrub C over Low Heath D over Very Open Low Sedges over Very Open Herbs.

Code:

eLAr. eLBr. xSAr. xSBr. xSCr. xSDc. VLr. xJr.

Location Details:

Stratum 1. *Eucalyptus accedens*, 10-15m tall, 8-10% canopy cover. Average foliage density 10%.

Stratum 2. *Eucalyptus accedens*, 4-5m tall, 4-5% canopy cover. Average foliage density 5%.

Stratum 3. *Xanthorrhoea preissii*, 1.5-2m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 4. *Xanthorrhoea preissii* and *Xanthorrhoea gracilis*, 1-1.5m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 5. *Macrozamia riedlei*, *Pimelea suaveolens*, *Hakea lissocarpa* and *Hakea stenocarpa*, 0.5-1m tall, 8-10% canopy cover. Average foliage density 10%.

Stratum 6. *Dryandra nivea*, *Hakea stenocarpa* and *Hibbertia spp.*, less than 0.5m tall, 30-35% canopy cover. Average foliage density 35%.

Stratum 7. Mixed Sedge species, *Lepidosperma spp.*, less than 0.5m tall, 1-2% canopy cover. Average foliage density 2%.

Stratum 8. Mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 1%.

Comments: Bare ground 20-25%, litter patchy around bases of shrubs and trees.

Soils & Topography: Red to caramel-red Clays on upper slopes and breakaways. Some outcropping nearby.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 11.

Key Description:

Woodland over Low Woodland A over Open Low Scrub B over Dwarf Scrub C over Dwarf Scrub D over Very Open Low Sedges over Very Open Herbs.

Code:

eMi. bLAI. xSBr. xSCI. xSDi. cVLr. xJr.

Location Details:

Stratum 1. *Eucalyptus marginata* and *Eucalyptus calophylla*, 15-18m tall, 10-15% canopy cover. Average foliage density 12%.

Stratum 2. *Banksia grandis*, 6-7m tall, 10-40% canopy cover. Average foliage density 25%.

Stratum 3. *Isopogon sphaerocephalus* 1-1.5m tall, 1% canopy cover. Average foliage density 1%.

Stratum 4. *Hibbertia hypericoides*, *Isopogon sphaerocephalus* and *Bossiaea ornata*, 0.5-1m tall, 10-20% canopy cover. Average foliage density 15%.

Stratum 5. *Pimelea suaveolens*, *Adenanthes barbigerus*, *Bossiaea ornata* and *Grevillea synapheae*, less than 0.5m tall, 20-30% canopy cover. Average foliage density 25%.

Stratum 6. *Mesomelaena graciliceps*, *Lepidosperma spp.* and *Cyathochaeta avenacea*, less than 0.5m tall, 8-10% canopy cover. Average foliage density 10%.

Stratum 7. Mixed Herbaceous species, less than 0.2m tall, 8-10% canopy cover. Average foliage density 10%.

Comments: Bare ground less than 5% as covered largely by leaf litter, particularly of *Banksia grandis*. Litter depth 1-5cm in depth.

Soils & Topography: Sandy-loams with large proportion of gravel in matrix on mid to upper slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 12.****Key Description:**

Open Woodland over Low Woodland A over Open Low Woodland B over Open Scrub over Open Low Scrub A over Open Low Scrub B over Open Dwarf Scrub C over Low Heath D over Very Open Herbs.

Code:

eMr. eLAI. eLBr. xSr. xSAr. xSBr. xSCr. xSDc. xJr.

Location Details:

Stratum 1. *Eucalyptus marginata* and *Eucalyptus calophylla*, 18-20m tall, 5% canopy cover. Average foliage density 5%.

Stratum 2. *Allocasuarina fraseriana*, *Eucalyptus marginata* and *Eucalyptus calophylla*, 10-14m tall, 25-30% canopy cover. Average foliage density 25%.

Stratum 3. *Allocasuarina fraseriana*, *Eucalyptus marginata* and *Eucalyptus calophylla*, 3-6m tall, 5% canopy cover. Average foliage density 5%.

Stratum 4. *Hakea cyclocarpa*, more than 2m tall, 3% canopy cover. Average foliage density 3%.

Stratum 5. *Hakea cyclocarpa*, 1.5-2m tall, 2% canopy cover. Average foliage density 2%.

Stratum 6. *Xanthorrhoea preissii*, *Hakea undulata* and *Hakea cyclocarpa*, 1-1.5m tall, 10% canopy cover. Average foliage density 8%.

Stratum 7. *Leucopogon capitellatus*, *Hakea lissocarpa*, *Isopogon sphaerocephalus* and *Hibbertia hypericoides*, 0.5-1m tall, 10% canopy cover. Average foliage density 10%.

Stratum 8. *Hibbertia hypericoides*, *Dryandra nivea* and *Styphelia tenuiflora*, less than 0.5m tall, 50% canopy cover. Average foliage density 45%.

Stratum 9. Mixed Herbaceous species, including grasses and *Conostylis*, less than 0.2m tall, 2-4% canopy cover. Average foliage density 3%.

Comments: Bare ground patchy. Litter largely around shrubs and trees, up to 3cm near Sheoak tree bases.

Soils & Topography: Sandy-gravels on mid to upper slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 13.

Key Description:

Open Woodland over Open Low Woodland B over Open Low Scrub A
over Open Low Scrub B over Open Dwarf Scrub C over Dwarf
Scrub D over Very Open Low Sedges over Very Open Herbs.

Code:

eMr. eLBr. xSAr. xSBr. xSCI. xSDi. cVLr. xJr.

Location Details:

Stratum 1. *Eucalyptus calophylla*, 20m tall, less than 1% canopy cover. Average foliage density 1%.

Stratum 2. *Eucalyptus calophylla* and *Eucalyptus marginata*, 3-5m tall, 2-3% canopy cover. Average foliage density 3%.

Stratum 3. *Xanthorrhoea preissii*, 1.5-2m tall, 2-3% canopy cover. Average foliage density 3%.

Stratum 4. *Hakea ruscifolia*, *Xanthorrhoea preissii* and *Hakea amplexicaulis*, 1-1.5m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 5. *Hakea stenocarpa*, *Hakea Tissocarpha*, *Calothamnus sanguineus* and *Daviesia decurrens*, 0.5-1m tall, 15-20% canopy cover. Average foliage density 15%.

Stratum 6. *Dryandra nivea*, *Baeckea camphorosmae*, *Comesperma polygaloides*, *Eriostemon spicatus* and *Hibbertia commutata*, less than 0.5m tall, 15-20% canopy cover. Average foliage density 15%.

Stratum 7. *Mesomelaena tetragona* and *Lepidosperma spp.*, less than 0.5m tall, 1-2% canopy cover. Average foliage density 2%.

Stratum 8. Mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 1%.

Comments: Bare ground 25%, litter patchy around base of shrubs and trees.

Soils & Topography: Clay-loams with some gravel over shallow lateritic outcropping on lower to mid slopes.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 14.****Key Description:**

Open Woodland over Open Low Woodland A over Open Low Scrub A
over Open Low Scrub B over Open Dwarf Scrub C over Open
Dwarf Scrub D over Very Open Herbs.

eMr. eLAr. xSAr. xSBr. xSCr. xSDr. xJr.

Location Details:

Stratum 1. *Eucalyptus calophylla*, 15m tall, 1% canopy cover.
Average foliage density 1%.

Stratum 2. *Eucalyptus wandoo*, *Eucalyptus calophylla* and *Eucalyptus patens*, 5-8m tall, 5-10% canopy cover. Average foliage density 8%.

Stratum 3. *Viminaria juncea*, *Hakea trifurcata*, *Hakea erinacea*,
Petrophile biloba, *Xanthorrhoea preissii* and *Trymalium ledifolium*, 1.5-2m tall, 5% canopy cover. Average foliage density 5%.

Stratum 4. *Petrophile biloba*, *Xanthorrhoea preissii* and *Trymalium ledifolium* 1-1.5m tall, 5-10% canopy cover. Average foliage density 8%.

Stratum 5. *Hypocalymma angustifolium*, *Baeckea camphorosmae* and
Astartea fascicularis, 0.5-1m tall, 5% canopy cover. Average foliage density 5%.

Stratum 6. *Hypocalymma angustifolium*, less than 0.5m tall, 10% canopy cover. Average foliage density 10%.

Stratum 7. Mixed Herbaceous species and grasses, less than 0.3m tall, 2% canopy cover. Average foliage density 2%.

Comments: Seasonal creek dissects area. Dry creek in summer months. Litter variable but up to 5cm in some areas.

Soils & Topography: Mixed alluvial and sands associated with creek bed, valley floor.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS

PLOT NO.: 15.

Key Description:

Open Low Woodland A over Open Low Woodland B over Open Scrub over Open Low Scrub A over Open Low Scrub B over Dwarf Scrub C over Open Dwarf Scrub D over Very Open Low Sedges over Very Open Herbs.

Code:

xLAr. bLBr. a₂Sr. xSAr. xSBr. xSCi. xSDr. xVLr. xJr.

Location Details:

Stratum 1. *Eucalyptus calophylla*, *Melaleuca preissiana* and *Eucalyptus wandoo*, 5-14m tall, 5-10% canopy cover. Average foliage density 6%.

Stratum 2. *Banksia littoralis*, 3-8m tall, 1-10% canopy cover. Average foliage density 5%.

Stratum 3. *Acacia saligna*, 3-4m tall, 2-10% canopy cover. Average foliage density 5%.

Stratum 4. *Xanthorrhoea preissii* and *Acacia saligna*, 1.5-2m tall, 2-3% canopy cover. Average foliage density 2%.

Stratum 5. *Xanthorrhoea preissii* and *Acacia saligna*, 1-1.5m tall, 5-10% canopy cover. Average foliage density 8%.

Stratum 6. *Hakea lissocarpha* and *Hibbertia hypericoides*, 0.5-1m tall, 15-20% canopy cover. Average foliage density 20%.

Stratum 7. *Kennedia coccinea*, *Hakea lissocarpha*, *Hibbertia hypericoides* and *Gompholobium polymorphum*, less than 0.5m tall, 4-5% canopy cover. Average foliage density 5%.

Stratum 8. *Leptosperma spp.* and *Cyatochaeta avenacea*, less than 0.5m tall, 2-3% canopy cover. Average foliage density 3%.

Stratum 9. Mixed Herbaceous species, less than 0.2m tall, 1-2% canopy cover. Average foliage density 1%.

Comments: Bare ground 20%, litter deeper at bases of shrubs and trees, varies from 1 to 5cm.

Soils & Topography: Clay-loams in valley floors.

APPENDIX C: JOHN FORREST NATIONAL PARK MUIR DESCRIPTIONS**PLOT NO.: 16.****Key Description:**

Low Woodland A over Open Low Scrub A over Open Low Scrub B over Dwarf Scrub C over Dense Low Sedges over Very Open Herbs.

Code:

eLAI. xSAr. xSBr. xSCI. cVLd. xJr.

Location Details:

Stratum 1. *Eucalyptus patens*, *Eucalyptus calophylla* and *Eucalyptus wandoo*, 5-14m tall, 5-12% canopy cover. Average foliage density 12%.

Stratum 2. *Hakea lissocarpa*, *Grevillea pilulifera*, *Xanthorrhoea preissii* and *Hakea undulata*, 1.5-2m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 3. *Hakea lissocarpa*, *Grevillea pilulifera*, *Xanthorrhoea preissii* and *Hakea undulata*, 1-1.5m tall, 1-2% canopy cover. Average foliage density 1%.

Stratum 4. *Xanthorrhoea preissii*, *Hypocalymma angustifolium*, *Acacia willdenowiana*, *Baeckea camphorosmae* and *Pimelea suaveolens*, 0.5-1m tall, 10-15% canopy cover. Average foliage density 12%.

Stratum 5. *Mesomelaena tetragona*, less than 0.4m tall, 70-80% canopy cover. Average foliage density 75%.

Stratum 6. Mixed Herbaceous species, less than 0.3m tall, 2-10% canopy cover. Average foliage density 5%.

Comments: Litter scattered amongst sedges, less than 2cm thick. Bare ground less than 15%.

Soils & Topography: Clay-loams on lower valley slopes.
