

Floristic Community Types in the Area of the System 6/1 Update

Background

The most recent regional floristic work on public lands over the entire Swan Coastal Plain (Gibson *et al.* 1994) was used as the basis for the regional comparison of bushland areas. This study considered the patterning of plant distribution on the Plain and relates to the total flora of the Plain. The presence or absence of individual species in standard areas (plots, sites or quadrats) is used to define floristic groupings based on shared species with the aid of various multivariate analysis techniques.

Gibson *et al.* located 509 100m² plots across the Swan Coastal Plain (Map 1). Plots were confined to public lands and located so as to sample the geomorphological/soil units and plant community patterning identified by previous studies. Plots were placed in bushland areas to sample vegetation in the best available condition. Within each plot all vascular plants were recorded and information collected on various physical parameters, vegetation structure and vegetation condition. Most plots (>95%) were visited on at least two occasions.

Not all the geographical or geomorphological variation was sampled. In particular, the Foothills, Pinjarra Plain and Quindalup Dunes were under-sampled and the Dandaragan Plateau was not sampled at all. The Foothills and the Pinjarra Plain have been largely cleared (and hence the chance to study them on crown lands was limited) while few reserves occur on the Quindalup Dunes. It was not possible to cover fully the estuarine and riverine vegetation in the time available for this study; these restricted habitat types have been documented elsewhere (Pen 1980, 1993; Siemon *et al.* 1993).

Analysis of 509 plots distinguished four 'super' groups, three related to the major geomorphological elements and a wetland group found across all the major geomorphological units. More detailed classification established 30 floristic community types, with a further 13 subdivisions evident making 43 types (Table 1), that is:

Supergroup 1 - Foothills/Pinjarra Plain: six floristic community types - 1 (a & b), 2 and 3 (a, b & c).

Supergroup 2: Seasonal Wetlands: 17 floristic community types - 4, 5, 6, 8, 9, 10 (a & b), 11, 12, 13, 14, 15, 16, 17, 18 and 19

Supergroup 3: Uplands, centred on Bassendean Dunes - nine floristic community types - 20 (a, b & c), 21 (a, b & c), 22 and 23 (a & b)

Supergroup 4: Uplands centred on Spearwood and Quindalup Dunes: 11 floristic community types - 24, 25, 26 (a & b), 27, 28, 29 (a & b), 30 (a, b & c).

The seasonal wetland group (Supergroup 4) is the most heterogeneous of the groups, containing the largest number of floristic community types and the lowest average number of plots per community type. As a consequence seasonal wetlands were under-sampled in the study.

The major environmental correlates with the classification were seasonal moisture regime and geomorphology as evident in the supergroups. Within the seasonal wetland group some geomorphic patterning was evident.

Using this classification as a basis a further 613 100m² plots were analysed for the System 6 and 1 Update (Map 1, System 6 area as delineated in Department of Conservation and Environment 1976 and 1983). These additional plots came from four additional sources: 291 plots from the System 6 Update program (including 13 from Trudgen and Keighery 1994, DEP 1996), 32 plots established by G.J. Keighery (pers comm.) for a study of Tuart woodlands on the Plain and 290 plots/relevees from Griffin (1994) on floristic variation on the sandplains to the north of Perth. These additional plots were located on private lands, Quindalup Dune system, Dandaragan Plateau and some System areas. Information for these plots was directly comparable with that collected in the Gibson *et al.* study.

Classification of these plots against the Gibson *et al.* data identified a further 23 floristic community types. Greater sampling density led to a reclassification of floristic groups 19, 20, 23 and 30, new subgroups being distinguished in the latter three groups. Fifteen supplementary groups were identified, namely:

Supergroup 1 - Foothills/Pinjarra Plain: a single group, floristic community type S8, associated with the Darling Scarp.

Supergroup 2: Seasonal Wetlands: eleven groups, floristic community types S1 - 7, S17, S19 and S20 and 19a and 19b from the reclassification of 19

Supergroup 3 : Uplands, centred on Bassendean Dunes and the Dandaragan Plateau: six groups, floristic community types 20d, 23c, S9, S10, S16, S18 (all centred on the Dandaragan Plateau)

Supergroup 4: Uplands centred on Spearwood and Quindalup Dunes: four groups, floristic community types S11 - 14, centred on Quindalup Dunes. Floristic community type 30 was further sampled and reclassified to identify 30a2 and 30c2.

(Group S15 could not be allocated to any supergroup)

That is 66 floristic community types are now recognised (Table 1). The additional floristic community types were to be expected as they are centred on geomorphological units either not sampled (Dandaragan Plateau) or under sampled (wetlands, Quindalup Dunes) in the base study (Gibson *et al.* 1994). The 1996 extension of the 1994 study also

- located further occurrences of some community types
- extended the geographic range of some types
- located vegetated areas of Muchea Limestone (presumed extinct in Gibson *et al.* 1994) and identified the floristic community types associated with these limestones (Keighery and Keighery 1995) and
- identified the floristic community types associated with the Perth to Gingin Ironstone Association.

Identification of the Floristic Community Types

For the purposes of describing the occurrence of floristic community types in bushland areas across the Plain the floristic community types are identified in bushland areas in two ways:

- (i) plots were located in the bushland and the floristic community type was determined by analysis (see Appendix 1 and 2)
- (ii) the floristic community types were inferred from information on the floristics of the area and the area's geographic location (for example in Keighery *et al.* 1997)

Floristic community types are not determined when the remaining vegetation is too disturbed to sample or not enough is known of the vegetation.

Floristic Community Types in the Area of the System 6/1 Update

B.J. Keighery, Department of Environmental Protection October 1997

4

Table 1: Floristic Community Types identified Gibson *et al.* (1994) and in the System 6 and part 1 Update (DEP 1996).

Key

Column 1: Floristic Community Type Codes

The numbers of the types additional to Gibson *et al.* are italicised if they are subsets of an existing group (in type 19, 20, 23 and 30) and italicised and preceded by an S if they are supplementary groups.

Column 2: General description of Floristic Community Types

Descriptions are based on generalised information from all plots in the group. Structural units are categorised into forest, woodlands, shrublands, sedgelands and herblands after Gibson *et al.* (1994).

Column 3: Average Species Richness per Floristic Community Type

Average species richness per 10X10m plot less those species only occurring in a single plot (singletons). Some community types can have a high proportion of singletons and these estimates of average species richness are underestimates in some cases.

Supergroup 1 - Foothills/Pinjarra Plain

1a	<i>Eucalyptus haematoxylon</i> - <i>E. marginata</i> woodlands on Whicher foothills	66.2
1b	Southern <i>Eucalyptus calophylla</i> woodlands on heavy soils	65.0
2	Southern wet shrublands	50.3
3a	<i>Eucalyptus calophylla</i> - <i>Kingia australis</i> woodlands on heavy soils	58.2
3b	<i>Eucalyptus calophylla</i> - <i>E. marginata</i> woodlands on sandy clay soils	57.3
3c	<i>Eucalyptus calophylla</i> - <i>Xanthorrhoea preissii</i> woodlands and shrublands	47.7
S8	<i>Eucalyptus wandoo</i> Woodlands (Scarp)	44.0

Supergroup 2 - Seasonal Wetlands

4	<i>Melaleuca preissiana</i> damplands	33.2
5	Mixed shrub damplands	38.4
6	Weed dominated wetlands on heavy soils	28.3
7	Herb rich saline shrublands in clay pans	44.8
8	Herb rich shrublands in clay pans	50.8
9	Dense shrublands on clay flats	34.8
10a	Shrublands on dry clay flats	45.9
10b	Shrublands on southern ironstones	53.3
11	Wet forests and woodlands	28.0
12	<i>Melaleuca teretifolia</i> and / or <i>Astartea</i> aff. <i>fascicularis</i> shrublands	27.3
13	Deeper wetlands on heavy soils	16.9
14	Deeper wetlands on sandy soils	16.5
15	Forests and woodlands of deep seasonal wetlands	16.8
16	Highly saline seasonal wetlands	11.2
17	<i>Melaleuca raphiophylla</i> - <i>Gahnia trifida</i> seasonal wetlands	13.4
18	Shrublands on calcareous silts	36.6
19a	Sedgelands in Holocene dune swales	25.0
19b	Woodlands over sedgelands in Holocene dune swales	26.3
S1	<i>Astartea</i> aff. <i>fascicularis</i> / <i>Melaleuca</i> species dense shrublands	22.4
S2	northern <i>Pericalymma ellipticum</i> dense low shrublands	17.7
S3	Wet sedgelands on sandy clays	10.6
S4	<i>Regelia ciliata</i> Dandaragan Plateau wetlands	22.0
S5	<i>Acacia saligna</i> wetlands	23.3
S6	Northern dense low shrublands	35.4
S7	Northern woodlands to forests over tall sedgelands alongside permanent wetlands	17.7
S17	<i>Eucalyptus rudis</i> / <i>Agonis linearifolia</i> wetlands in Bassendean Dunes	15.2
S19	Dense tall shrublands	11.5
S20	Northern shrublands on sandy clays	12.42

Floristic Community Types in the Area of the System 6/1 Update

B.J. Keighery, Department of Environmental Protection October 1997

5

Table 1 (cont.) : Floristic Community Types identified Gibson *et al.* (1994) and in the System 6 and part 1 Update (DEP 1996).

Supergroup 3 - Uplands, centred on Bassendean Dunes and the Dandaragan Plateau

20a	<i>Banksia attenuata</i> woodlands over species rich dense shrublands	64.5
20b	Eastern <i>Banksia attenuata</i> and / or <i>Eucalyptus marginata</i> woodlands	59.7
20c	Eastern shrublands and woodlands	60.4
20d	Dandaragan Plateau shrublands and woodlands	67.6
21a	Central <i>Banksia attenuata</i> - <i>Eucalyptus marginata</i> woodlands	52.0
21b	Southern <i>Banksia attenuata</i> woodlands	57.5
21c	Low lying <i>Banksia attenuata</i> woodlands or shrublands	38.5
22	<i>Banksia ilicifolia</i> woodlands	30.0
23a	Central <i>Banksia attenuata</i> - <i>B. menziesii</i> woodlands	59.0
23b	Northern <i>Banksia attenuata</i> - <i>B. menziesii</i> woodlands	47.0
23c	North-eastern <i>Banksia attenuata</i> - <i>B. menziesii</i> woodlands	53.0
S9	<i>Banksia attenuata</i> woodlands over dense low shrublands	38.9
S10	<i>Calothamnus sanguineus</i> dense low shrublands on sandy laterites	44.2
S16	Mixed dense shrublands on yellow brown sands	38.8
S18	<i>Eucalyptus marginata</i> /E. <i>calophylla</i> Woodlands on laterites	35.7

Supergroup 4 - Uplands centred on Spearwood and Quindalup Dunes

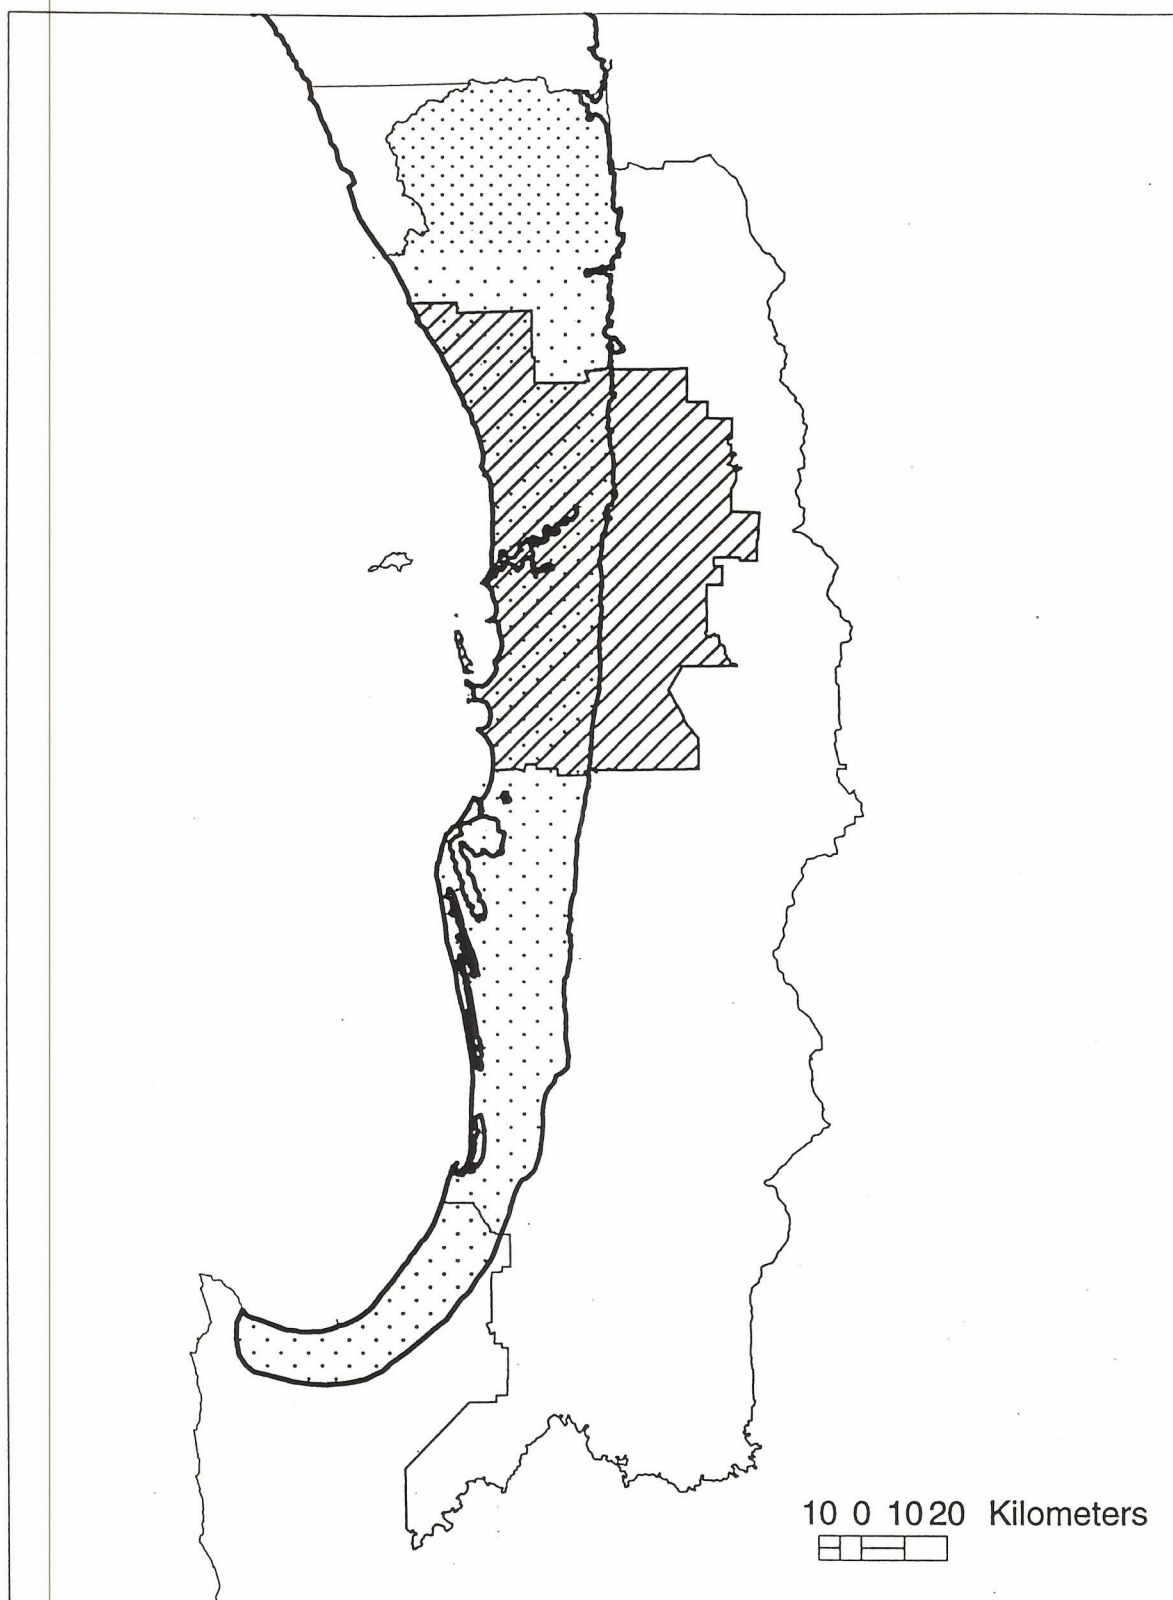

Spearwood Dunes		
24	Northern Spearwood shrublands and woodlands	38.9
25	Southern <i>Eucalyptus gomphocephala</i> - <i>Agonis flexuosa</i> woodlands	48.1
26a	<i>Melaleuca huegelii</i> - <i>M. acerosa</i> shrublands of limestone ridges	49.6
26b	Woodlands and mallees on limestone	49.8
27	Species poor mallees and shrublands on limestone	37.3
28	Spearwood <i>B. attenuata</i> or <i>B. attenuata</i> - <i>Eucalyptus</i> woodlands	55.1
Quindalup Dunes		
29a	Coastal shrublands on shallow sands	33.7
29b	<i>Acacia</i> shrublands on taller dunes	34.2
30a2	<i>Callitris preissii</i> and/or <i>Melaleuca lanceolata</i> forests and woodlands	17.5
30c2	Woodlands and shrublands on Holocene dunes (re-allocated from 30c)	23.9
30b	Quindalup <i>Eucalyptus gomphocephala</i> and/or <i>Agonis flexuosa</i> woodlands	35.0
S11	Northern <i>Acacia rostellifera</i> - <i>Melaleuca acerosa</i> shrublands	21.0
S12	Rottneest Island <i>M. lanceolata</i> and/or <i>Callitris preissii</i> forests and woodlands	16.0
S13	Northern <i>Olearia axillaris</i> - <i>Scaevola crassifolia</i> shrublands	18.8
S14	<i>Spinifex longifolius</i> grassland and low shrublands	8.6

	Not allied with any supergroup	S15	Weed group
