

Fire Ecology and Banksia Woodland Regeneration

Are you interested in using Fire for Land Management?

The City of Greater Geraldton, in partnership with Kings Park Science (DBCA) and Murdoch University, is researching how fire, weeds and Banksia Woodland species interact at a site in the Bootenal locality, Geraldton.

This project builds on research being undertaken in the greater Perth area which is investigating how changes in fire frequency and season, invasive species, and climate interact to impact native species persistence in Banksia Woodlands.

If you would like to know more about this project, Please call Erin O'Connor at the City of Greater Geraldton:
