1. SUMMARY

Mattiske Consulting Pty Ltd was commissioned in July 2008 by Polaris Metals NL to carry out a flora and vegetation survey on the Carina Exploration Tenement. The proposed Carina mine is located in a small section of the Exploration Tenement E77/1115-I. The wider tenement was assessed to provide local context for the proposed mine site.

A total of 237 taxa (including subspecies and varieties) from 103 genera and 45 families were recorded along the proposed Carina Transport Route. The most prominent families represented were Myrtaceae (43 taxa), Mimosaceae (28 taxa), Myoporaceae (15 taxa), Proteaceae (14 taxa) and Chenopodiaceae (12 taxa).

No plant taxa gazetted as Declared Rare Flora pursuant to subsection (2) of section 23F of the *Wildlife Conservation Act 1950* (WA) (Department of Environment and Conservation, 2008f) or listed as Threatened pursuant to Schedule 1 of the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth) (Department of the Environment, Water, Heritage and the Arts 2008b) were recorded during the survey within the Carina Exploration Tenement.

Six plant taxa listed as a Priority species by the Department of Environment and Conservation (2008d) were recorded within the Carina Exploration Tenement. These six species were *Pseudactinia* sp. Bungabbin Hill (F.H. & M.P. Molemans 3069) (P1), *Acacia crenulata* (P3), *Acacia eremophila* var. *variabilis* (P3), *Grevillea georgeana* (P3), *Spartothamnella* sp. Helena and Aurora Range (P3) and *Daviesia purpurascens* (P4). In addition, one new undescribed species of *Acacia* was recorded in the Carina Exploration Tenement. This latter new species was confirmed by the *Acacia* expert, Dr Bruce Maslin.

Two introduced (exotic) species were recorded within the proposed Carina Exploration Tenement. The taxa were *Erodium cicutarium* and *Erodium botrys*. The presence of rabbits in the area would not assist in the management of these species as there is potential to spread seed in wider areas through their activities.

Twenty-five plant communities were defined and mapped during the survey. These can be broadly divided in to two major groups. Firstly, a sclerophyllous Eucalypt woodland of *Eucalyptus salmonophloia* and *Eucalyptus salubris*, together with a range of other Eucalypt species, over an understorey composed predominantly *Acacia*, *Eremophila* and *Atriplex* species. The other major group was the *Acacia* dominated scrub and thicket communities.

In terms of potential impact, the majority of the Carina Tenement plant communities are relatively widespread and contain taxa that are widespread in the region. Particular consideration may need to be given to the plant communities (S1, S2, W2, W4, W12, W15, W16, W20, W23, W24, W25 and W27) that support the Priority species and the vegetation community S2 that supports the undescribed *Acacia* species. The latter range of communities that support these species parts reflects the lack of research in the area, but also the significant variety of flora in the range of habitats in the area. The proposed mine footprint is anticipated to only impact communities S2, W2, W4, W12 and W22.

At the time of this assessment, no footprint of the proposed development was available and consequently it was not possible to assess the impacts of the proposed mining and associated infrastructure on the specific populations and communities within the Carina Exploration Tenement.

2. INTRODUCTION

Mattiske Consulting Pty. Ltd. was commissioned in 2008 by Polaris Metals NL to carry out a flora and vegetation survey of the Carina Exploration Tenement. The Carina Tenement was assessed over several trips between May and July 2008.

2.1 Location

The Carina Exploration Tenement E77/1115 is located approximately 105 km north of the town of Southern Cross, in Western Australia, Figure 1. The area to be surveyed lies within the Coolgardie Botanical District (Beard, 1990). Part of the Carina project area occurs in part of the Jaurdi station, which is proposed as the Jaurdi Conservation Park (see Environmental Protection Authority 2007).

2.2 Climate

Beard (1990) described the climate of the Coolgardie Botanical District as arid non-seasonal to semi arid Mediterranean, characterised by an arid climate with cool winters and hot, dry summers. Annual precipitation in the Coolgardie Botanical District ranges from 200 mm to 300 mm, with the bulk of the precipitation falling in the winter months, with sporadic summer cyclonic rainfall. Southern Cross, which is located to the southwest of the survey area, has an annual rainfall of 294 mm (Bureau of Meteorology 2008).

2.3 Geology and Topography

The Polaris Metals NL exploration tenements are generally located within an area, which consist of gently undulating plains with occasional ranges of low hills lying on the ‘Southern Cross Terrains’ of the Yilgarn Craton (Department of Conservation and Land Management, 2003). Beard (1972, 1990) described the Coolgardie Botanical District as having major greenstone belts, which provide the hilly topography, together with banded ironstone ridges rising from the brown calcareous earth of the surrounding plains. There are four main banded ironstone ranges within the area: the Helena and Aurora, Die Hardy, Jackson and Windarling Ranges (Department of Environment and Conservation, 2007). A number of endemic threatened species and communities are associated with each Banded Ironstone Formation (BIF) (Department of Environment and Conservation 2008a; Environmental Protection Authority 2007; Gibson *et al.* 1997; 2007).

2.4 Flora and Vegetation

The survey area lies within the Coolgardie Botanical District, as defined by Beard (1972; 1990). This corresponds with the Coolgardie 2 Bioregion (COO2 – Southern Cross subregion) as defined by the Interim Biogeographical Regionalisation for Australia (IBRA) (Cowan *et al.* 2001). This subregion is characterised by high species and ecosystem diversity, as it is a biogeographic interzone between the Coolgardie and Murchison biogeographic regions (Cowan *et al.* 2001). Dominant plant families within the Coolgardie Botanical District include Myrtaceae (myrtles such as Eucalypts and Melaleucas), Asteraceae (daisies), Chenopodiaceae (salt bushes) and Poaceae (grasses). The Coolgardie Botanical District is characterized by Eucalypt woodlands and covers 5% of the State of Western Australia (Beard 1990).

Beard (1972) originally described the major vegetation formations of the area, including the Helena and Aurora Ranges. Beard (1972) characterises several vegetation units in the region including: *Acacia* thickets on sandplains, *Acacia* thickets on ironstone, *Acacia* scrub on granite, *Acacia* scrub with saltbush understorey, Mulga low woodland, Sclerophyll woodland and Shrub steppe. These units are covered within two main vegetation systems: the Bungabbin system (vegetation on the ironstone outcrops, including the Bungabbin hills) and the Jackson system, occupying a greater part of the area of dissected sandplains (Beard 1972).

The vegetation of the ranges (Bungalbin system) consist of thickets of *Acacia tetragonophylla*, *Acacia quadriflora*, *Dryandra arborea* (on rocky outcrops) and *Allocasuarina acutivalvis* with an understorey of shrubs, such as *Dodonaea* spp., *Eremophila* spp., *Eriostemon brucei*, *Enchylaena tomentosa*, and *Grevillea paradoxa* (Beard 1990; Gibson *et al.* 1997). The slopes and flats (Jackson system) consist of Eucalypt woodlands (including *Eucalyptus salmonophloia*, *E. salubris*, *E. transcontinentalis*, *E. longicornis*, *E. corrugata* and *E. sheathiana*) with an understorey of sclerophyllous shrubs such as *Melaleuca pauperiflora*, or soft leaved shrubs such as *Atriplex vesicaria* and *Atriplex nummularia* (Beard 1990; Cowan *et al.* 2001; Gibson *et al.* 1997).

Studies of the flora of the region by Gibson *et al.* (1997) and Gibson and Lyons (1997 a; b; c) have provided more detailed floristics of the region. Furthermore, more recently, detailed flora surveys of BIF ranges within the Yilgarn Craton by both mining proponents and the Department of Environment and Conservation (Department of Environment and Conservation 2007; Gibson *et al.* 2007) have been undertaken. The results of these surveys, some of which are ongoing, indicate that the individual BIF ranges support significantly different plant communities and that some plant communities are highly restricted in their distribution within an individual BIF range. The BIF ranges appear to be refugia habitats with localised species and plant communities. In addition, evidence also supports recent evolutionary divergence of some species (Gibson *et al.* 2007).

A recent interim report released by the Department of Environment and Conservation (2007) recommends that a minimum of 15% and up to 60% of the total number of BIF ranges within the Yilgarn Craton be reserved in their entirety due to the high biodiversity values contained within those ranges. These targets include both BIF ranges in their entirety throughout the Yilgarn Craton and within each individual range. That is, it is recommended that 15% and up to 60% of all BIF ranges are conserved in their entirety and 15% and up to 60% of each individual BIF range are conserved (Department of Environment and Conservation 2007).

The Environmental Protection Authority has recommended that the Mount Manning Region (including the Helena and Aurora, Die Hardy, Windarling, Jackson and Koolyanobbing Ranges) is worthy of recognition as a biodiversity hotspot comparable to Mt Lesueur, Stirling Range and Fitzgerald River regions in Western Australia (see Hopper and Gioia 2004; Environmental Protection Authority 2007).

Further investigation is required to determine the conservation importance of the proposed Jaurdi Conservation Park which includes the Carina prospect (Tenement E77/1115) (see Environmental Protection Authority 2007).

2.5 Clearing of Native Vegetation

The *Environmental Protection (Clearing of Native Vegetation) Regulations 2004* dictate that any clearing of native vegetation in Western Australia requires a permit to do so from the Department of Industry and Resources. ‘Native Vegetation’ refers to native vegetation as indigenous aquatic and terrestrial vegetation, including dead vegetation unless that dead vegetation is of a class declared by regulation to be excluded from this definition but not vegetation planted in a plantation (*Environmental Protection (Clearing of Native Vegetation) Regulations 2004, section 3(1)*). In the *Environmental Protection Act 1986* Section 51A, clearing is defined as: the killing or destruction of; the removal of; the severing or ringbarking of trunks or stems of; or the doing of substantial damage to some or all of the native vegetation in an area, including the flooding of land, the burning of vegetation, the grazing of stock or an act or activity that results in the above.

Ten clearing principles are specified in Schedule 5 of the *Environmental Protection Act 1986*:

1. Native vegetation should not be cleared if it comprises a high level of biodiversity.
2. Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a significant habitat for fauna indigenous to Western Australia.
3. Native Vegetation should not be cleared if it includes, or is necessary, for the continued existence of rare flora.
4. Native vegetation should not be cleared if it compromises the whole or part of, or is necessary for the maintenance of a threatened ecological community.
5. Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.
6. Native vegetation should not be cleared if it is growing in, or in association with, and environment associated with a watercourse or wetland.
7. Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
8. Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.
9. Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.
10. Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence of flooding.

2.6 Rare and Priority Flora

Species of flora and fauna are afforded Rare or Priority conservation status where their populations are restricted geographically or threatened by local processes. The Department of Environment and Conservation (2008a) recognises these threats of extinction and consequently applies regulations towards population and species protection (Appendix A1).

Rare Flora species are gazetted under subsection 2 of section 23F of the *Wildlife Conservation Act 1950* (WA) and therefore it is an offence to “take” or damage rare flora without Ministerial approval. Section 23F of the *Wildlife Conservation Act 1950* (WA) defines “to take” as “... to gather, pick, cut, pull up, destroy, dig up, remove or injure the flora to cause or permit the same to be done by any means.”

Priority Flora are under consideration for declaration as ‘rare flora’, but are in urgent need of further survey (Priority one to three) or require monitoring every 5-10 years (Priority four). Appendix A1 presents the definitions of Declared Rare and the four Priority ratings under the *Wildlife Conservation Act 1950* (WA) as extracted from Department of Environment and Conservation (2008b).

2.7 Threatened Flora Species and Ecological Communities

Threatened flora species are a matter of national environmental significance under the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth). A person must not take an action that has, will have, or is likely to have a significant impact on a listed threatened species or ecological community, without approval from the Commonwealth Minister for the Environment and Water Resources. Appendix A2 presents the definitions of the categories of threatened species under the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth).

Communities are described as ‘Threatened Ecological Communities’ (TECs) if they have been defined by the Western Australian Threatened Ecological Communities Scientific Advisory Committee and found to be Presumed Totally Destroyed (PD), Critically Endangered (CR), Endangered (EN) or Vulnerable (VU) (Department of Environment and Conservation, 2008c). For further definitions of TEC categories and criteria refer to English and Blyth (1997, 1999). Some Western Australian TECs have also been listed as “Threatened Ecological Communities” under the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth) (Department of the Environment, Water, Heritage and the Arts, 2008a). Appendix A3 presents a summary of the definitions of Threatened Ecological Communities (Department of Environment and Conservation, 2008c).

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Department of Environment and Conservation’s Priority Ecological Community Lists under Priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community, and evaluation of conservation status, so that consideration can be given to their declaration as threatened ecological communities. Ecological Communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5 (Department of Environment and Conservation, 2008c). Appendix A4 presents a summary of the definitions of Priority Ecological Communities (Department of Environment and Conservation, 2008c).

2.8 Local and Regional Significance

The Environmental Protection Authority (2004) in Guidance Statement 51 states that “species, subspecies, varieties, hybrids and ecotypes may be significant for a range of reasons, other than as Declared Rare Flora or Priority Flora”. According to Environmental Protection Authority (2004) Guidance Statement 51, other significant flora may include taxa that:

- have a keystone role in a particular habitat for threatened species, or supporting large populations representing a significant proportion of the local regional population of a species;
- have relic status;
- have anomalous features that indicate a potential new discovery;
- are representative of the range of a species (particularly, at the extremes of range, recently discovered range extensions, or isolated outliers of the main range);
- show the presence of restricted subspecies, varieties, or naturally occurring hybrids;
- have local endemism/a restricted distribution;
- are poorly reserved (Environmental Protection Authority, 2004).

2.9 Exotic (introduced) Plant Species

Exotic (introduced) plant species or weeds are plants growing where they are not wanted (Hussey *et al.* 2007). Exotic (introduced) species may become serious environmental weeds and may be defined as Declared Plant species pursuant to section 37 of the *Agricultural and Related Resources Protection Act 1976* by Department of Agriculture and Food (2008) according to their threat to agriculture and the environment.

3. OBJECTIVES

The specific objectives of the flora and vegetation survey of the Carina Exploration Tenement were to:

- Record or collect and identify all vascular plant species present within the survey area;
- Review the distributions and conservation status of all recorded vascular plant species recorded by reference to current literature, current listings (Department of Environment and Conservation, 2008d) and the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth) and with plant collections held at the Western Australian Herbarium (Department of Environment and Conservation 2008a);
- Define and prepare a vegetation map of the plant communities located within the Carina Exploration Tenement;
- review the local and regional significance of the plant communities recorded within the Carina Exploration Tenement in accordance with Guidance Statement 51 (Environmental Protection Authority 2004) and the current listings of TEC's (Department of Environment, Water, Heritage and the Arts 2008).
- Prepare a report summarising the findings.

4. METHODS

An initial search for the Declared Rare and priority flora species known to occur in the region was made using the Western Australian Herbarium database compiled by the Western Australian Herbarium (2008d).

Experienced Botanists from Mattiske Consulting Pty Ltd surveyed the Carina Exploration Tenement between May and July 2008. A total of 235 survey sites were assessed (Appendix E). All geographical coordinates cited in this report are based on the GDA94 datum. The selection of recording sites was based on differences in structure and floristics of the communities within the Carina Exploration Tenement. The survey was undertaken in accordance with Guidance Statement 51 (Environmental Protection Authority 2004).

The vegetation survey consisted of sampling and recording all flora occurring within a 25 m radius of each survey site. The flora and vegetation were described and sampled systematically at each survey site, and additional opportunistic collecting was undertaken wherever previously unrecorded plants were observed, whilst moving from one location to the next. At each site the following floristic and environmental parameters were noted; GPS location, topography, percentage litter cover, soil type and colour, percentage of bare ground, outcropping rocks and their type, pebble type and size, time since fire and the percentage cover and average height of each vegetation stratum. For each vascular plant species, the average height and percent cover of both live and dead material were recorded.

All plant specimens collected during the field surveys were dried and fumigated in accordance with the requirements of the Western Australian Herbarium. The plant species were identified and then compared with pressed specimens housed at the West Australian Herbarium. Where appropriate, plant taxonomists with specialist skills were consulted, including Bruce Maslin, Malcolm Trudgen and other specialists at the Western Australian Herbarium. Nomenclature of the species recorded is in accordance with the Department of Environment and Conservation (2008d).

Additional survey site data, which was recorded during the vegetation survey of the proposed Carina Transport Route, was used to provide additional data to define the plant communities. PATN Version 3.11 (Blatant Fabrications, 2006) statistical analysis software was used to analyse the field data and derive relationships between survey sites based on the percentage cover and presence or absence of species between survey sites. The resulting information provided data which grouped sites based on species composition. This data was used to inform and support interpretation of aerial photography and delineation of individual plant communities. The descriptions of plant communities within the Carina Exploration Tenement are based on the Structural Forms of Australian Vegetation developed by Beard (1990).

5. RESULTS

5.1 Desktop Survey for Potential Rare and Priority Flora Species in the Survey Area

A thorough desktop survey of potential Rare and Priority Flora species potentially in the greater Yilgarn Iron Ore Project Area has previously been reported. Refer to Mattiske Consulting Pty Ltd (2008a) for further detail on Declared Rare and Priority species known to occur in the wider region. In the immediate vicinity of the proposed Carina Exploration Tenement, there are a range of Priority Flora species according to the *Wildlife Conservation Act 1950* (WA) and listed on the Department of Environment and Conservation (2008d). These are *Grevillea georgeana* (P3), *Daviesia purpurascens* (P4) and *Sowerbaea multicaulis* (P4).

5.2 Threatened Flora Species and Ecological Communities

There are no Threatened Ecological Communities (TECs) listed in the Coolgardie Botanical District (Department of the Environment, Water, Heritage and the Arts, 2008a; Department of Environment and Conservation, 2008a).

Eight listed Priority Ecological Communities (PECs) (Department of Environment and Conservation, 2008e) are found in the area near to the proposed Carina Transport Route. These are the Koolyanobbing vegetation complexes (P1); Diehardy Range vegetation complex (P1); Mount Jackson Range vegetation complex (P1); Windarling Ranges vegetation complex (P1); Helena and Aurora Range vegetation complexes (P2); Mount Manning Range vegetation complex (P3); Yilgarn Hills vegetation complex (P3) and the Duladgin Ridge vegetation complex (P3) (Department of Environment and Conservation, 2008e).

5.3 Flora

A total of 237 taxa (including subspecies and varieties) from 103 genera and 45 families were recorded along the proposed Carina Transport Route. The most prominent families represented were Myrtaceae (43 taxa), Mimosaceae (28 taxa), Myoporaceae (15 taxa), Proteaceae (14 taxa) and Chenopodiaceae (12 taxa).

5.4 Rare and Priority Flora

No plant taxa gazetted as Declared Rare Flora pursuant to subsection (2) of section 23F of the *Wildlife Conservation Act 1950* (WA) (Department of Environment and Conservation, 2008f) or listed as Threatened pursuant to Schedule 1 of the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth) (Department of the Environment, Water, Heritage and the Arts 2008b) were recorded during the survey within the Carina Exploration Tenement.

Six plant taxa listed as a Priority species by the Department of Environment and Conservation (2008d) were recorded within the Carina Exploration Tenement. These six species were *Pseudactinia* sp. Bungabbin Hill (F.H. & M.P. Molemans 3069) (P1), *Acacia crenulata* (P3), *Acacia eremophila* var. *variabilis* (P3), *Grevillea georgeana* (P3), *Spartothamnella* sp. Helena and Aurora Range (P3) and *Daviesia purpurascens* (P4). In addition, one new undescribed species of *Acacia* was recorded in the Carina Exploration Tenement. This latter new species was confirmed by the *Acacia* expert, Dr Bruce Maslin.

The locations of the six Priority Flora are summarized in Appendix F. Each Priority Flora species is summarized below:

- *Pseudactinia* sp. Bungabbin Hill (F.H. & M.P. Molemans 3069) EPACRIDACEAE (Priority 1)

Shrub to between 0.3 m and 0.8 m found growing on yellow sands or yellow-brown loamy sands. It produces pink or red flowers between July and October. There are 14 records of this species at the Western Australian Herbarium. This species has been recorded within the Coolgardie, Murchison, Yalgoo and Avon Wheatbelt bioregions. This taxon was recorded at two locations within plant community S1 (see Appendix F and Figure 1).

- *Acacia crenulata* MIMOSACEAE (Priority 3)
Bushy shrub to Tree between 0.7 m and 3 m found growing on sands and clays often in association with rocky rises and granite outcrops. It produces yellow flowers. There are 17 records of this species at the Western Australian Herbarium. This species has been recorded within the Coolgardie bioregions. This taxon was recorded at eight locations within plant communities S1, W2, W4, W12, W15 and W27 (see Appendix F and Figure 1).
- *Acacia eremophila* var. *variabilis* MIMOSACEAE (Priority 3)
Shrub between 1 m and 1.6 m found growing on sands and sandy-loams. It produces yellow flowers. There are 16 records of this species at the Western Australian Herbarium. This species has been recorded within the Coolgardie, Murchison and Wheatbelt areas and extends eastwards to north of Esperance. This taxon was recorded at five locations within plant communities S1, W24 and W27 (see Appendix F and Figure 1).
- *Grevillea georgeana* PROTEACEAE (Priority 3)
Erect shrub between 1 m and 3 m high, found growing on stony loams and clay associated with ironstone hill tops and slopes. It produces pink, red and cream flowers between January and March and September and November. There are 40 records of this species at the Western Australian Herbarium. This species has been recorded within the Coolgardie and Murchison bioregions. This taxon was recorded at twelve locations within plant communities S2, W15, W22, W23 and W25 (see Appendix F and Figure 1).
- *Spartothamnella* sp. Helena and Aurora Range LAMIACEAE (Priority 3)
Shrub to between 0.3 m and 1 m found growing on rocky areas associated with ironstone. There are 12 records of this species at the Western Australian Herbarium. This species has been recorded within the Coolgardie, Yalgoo and Avon Wheatbelt bioregions. This taxon was recorded at two locations within plant communities W5 and W15 (see Appendix F and Figure 1).
- *Daviesia purpurascens* PAPILIONACEAE (Priority 4)
Erect shrub to 1 m found growing on sandy or loamy soils on flats and ridges, which produces yellow, red and brown flowers between August and October. There are 42 records of this species at the Western Australian Herbarium. This species has been recorded principally within the Coolgardie and Goldfields bioregions, with other specimens recorded in the Carnarvon, Murchison, Avon Wheatbelt, Geraldton Sandplain and Mallee bioregions. This taxon was recorded at nine locations within plant communities W2, W15, W16, W20 and W24 (see Appendix D and Figure 1).

In addition an undescribed species of *Acacia* was recorded at one location within plant community S2 (see Appendix D and Figure 1). This latter species was confirmed by the *Acacia* expert in Western Australia (Dr Bruce Maslin) as being a new and undescribed species. This species was recorded at GDA94 - Zone 51J - 214551 mE and 6622738 mN. In view of this species potential significance, additional targeting searches were undertaken for this species near the drilling sites and it appears that this species remains relatively restricted at this juncture.

5.5 Introduced Species

Two introduced (exotic) species were recorded within the proposed Carina Exploration Tenement. The taxa were *Erodium cicutarium* and *Erodium botrys*. The presence of rabbits in the area would not assist in the management of these species as there is potential to spread seed in wider areas through their activities. These species are common on farmlands, pastures and along roadsides, especially on loamy soils (Hussey *et al.*, 2007).

5.6 Vegetation

Twenty-five plant communities were defined and mapped during the survey, Table 1 and Figure 1. These can be broadly divided into two major groups. Firstly, a sclerophyllous Eucalypt woodland of *Eucalyptus salmonophloia* and *Eucalyptus salubris*, together with a range of other Eucalypt species, over an understorey composed predominantly *Acacia*, *Eremophila* and *Atriplex* species. The other major group was the *Acacia* dominated scrub and thicket communities.

In terms of the vegetation types, the Eucalypt Woodlands can be broadly described as a sclerophyll woodland. The upper stratum of the woodland is dominated by a range of Eucalypt species. *Eucalyptus salmonophloia* and *Eucalyptus salubris* were commonly associated in vegetation groups W1 and W2, together with *Eucalyptus corrugata*, *Eucalyptus transcontinentalis*, *Eucalyptus longicornis*, *Eucalyptus sheatheana* and *Eucalyptus yilgarnensis*. The understorey consisted of a range of shrubs, principal amongst which were the *Eremophila*s and *Acacias*. The typical range of species found in the woodland understorey included *Eremophila scoparia*, *Eremophila ionantha*, *Eremophila granitica*, *Acacia jennerae*, *Acacia prainii*, *Acacia colletioides*, *Acacia tetragonophylla*, *Grevillea acuaria*, *Senna artemisioides* subsp. *filifolia*, *Olearia muelleri*, *Exocarpos aphyllus* and *Santalum acuminatum*. Chenopods, such as *Atriplex nummularia* and *Atriplex vesicaria*, together with *Maireana triptera* were common.

The other woodland communities contained species in common; however, a decision to differentiate these as separate vegetation groups was based on a combination of factors. These included:

1. An identifiable physical environment characteristic;
2. Restricted or unique *Eucalyptus* taxa present within the vegetation type;
3. Differentiation based on the type of woodland described;
4. Non-Eucalypt species found to be present; and
5. Differentiation based on particular soil characteristics.

The scrubland and thicket vegetation types recorded within the Carina Exploration Tenement were delineated from each other on the basis of characteristics applied to the woodland communities. All three vegetation types described as shrublands contained taxa unique to their vegetation type (Appendix D):

Several of the plant communities identified within the Carina Exploration Tenement overlap with components of the PECs (Department of the Environment, Water, Heritage and the Arts, 2008a; Department of Environment and Conservation, 2008e). The latter is reflected in Priority species and associated species that occur in association with the ironstone ridges and slopes. The significance of the latter will be clarified when the proposed extent of the mining operations and the associated mining areas are provided.

5.7 Condition of the Vegetation

The condition of the vegetation in the Carina Exploration Tenement is generally good, despite the gazing activities of rabbits and the presence of tracks. The condition rating is based on the definition of Keighery (1994).

Table 1: Summary of Vegetation Mapping Units recorded within the Carina Exploration Tenement

Mapping Code	Description
S1	Scrub of <i>Allocasuarina corniculata</i> , <i>Acacia sibina</i> , <i>Melaleuca hamata</i> , <i>Acacia resinimarginata</i> and occasional dense patches of <i>Callitris preissii</i> over <i>Baeckea elderiana</i> , <i>Phebalium canaliculatum</i> , <i>Thryptomene kochii</i> and <i>Hibbertia eatoniae</i> on sandy flats.
S2	Scrub of <i>Allocasuarina campestris</i> , <i>Casuarina pauper</i> , <i>Banksia arborea</i> , <i>Melaleuca hamata</i> , <i>Melaleuca nematophylla</i> , <i>Acacia sibina</i> , <i>Calycopeplus paucifolius</i> and <i>Brachychiton gregorii</i> over <i>Baeckea elderiana</i> and <i>Philoteca brucei</i> subsp. <i>brucei</i> and <i>Eremophila decipiens</i> subsp. <i>decipiens</i> , with emergent <i>Eucalyptus ewartiana</i> , <i>Eucalyptus horistes</i> and <i>Eucalyptus oleosa</i> subsp. <i>oleosa</i> on red-brown clay upper slopes and ridges.
S5	Scrub of <i>Allocasuarina campestris</i> over <i>Acacia tetragonophylla</i> and <i>Alyxia buxifolia</i> over <i>Melaleuca leiocarpa</i> , <i>Philoteca brucei</i> subsp. <i>brucei</i> , <i>Eremophila decipiens</i> subsp. <i>decipiens</i> and <i>Exocarpos aphyllus</i> over <i>Scaevola spinescens</i> , <i>Prostanthera gryloana</i> and <i>Phebalium megaphyllum</i> on red-brown clay with quartz pebbles on lower slopes.
W1	Woodland of <i>Eucalyptus salmonophloia</i> , <i>Eucalyptus salubris</i> , <i>Eucalyptus sheathiana</i> , <i>Eucalyptus corrugata</i> , <i>Eucalyptus yilgarnensis</i> , <i>Eucalyptus transcontinentalis</i> , <i>Eucalyptus longicornis</i> and <i>Eucalyptus ravida</i> over <i>Acacia jennerae</i> , <i>Acacia prainii</i> , <i>Acacia colletioides</i> , <i>Santalum acuminatum</i> , <i>Exocarpos aphyllus</i> , <i>Eremophila scoparia</i> , <i>Eremophila granitica</i> , <i>Eremophila ionantha</i> , <i>Senna artemisioides</i> subsp. <i>filifolia</i> and <i>Atriplex nummularia</i> over <i>Atriplex vesicaria</i> , <i>Grevillea acuaria</i> , <i>Olearia muelleri</i> , <i>Olearia pimelioides</i> and <i>Austrostipa elegantissima</i> on red-brown clay on flats.
W2	Woodland of <i>Eucalyptus salmonophloia</i> with <i>Eucalyptus ravida</i> and mixed Eucalypys over <i>Eremophila ionantha</i> , <i>Exocarpos aphyllus</i> , <i>Atriplex nummularia</i> and <i>Acacia colletioides</i> over <i>Atriplex vesicaria</i> on flat red clay soils.
W4	Woodland of <i>Eucalyptus longicornis</i> , <i>Eucalyptus salubris</i> , <i>Eucalyptus corrugata</i> and <i>Eucalyptus moderata</i> over <i>Eremophila ionantha</i> , <i>Eremophila scoparia</i> , <i>Senna artemisioides</i> subsp. <i>filifolia</i> , <i>Exocarpos aphyllus</i> , <i>Atriplex nummularia</i> and <i>Santalum acuminatum</i> over <i>Acacia colletioides</i> and <i>Atriplex vesicaria</i> on red-brown sandy clay flats with scattered ironstone and quartz pebbles.
W5	Woodland of <i>Eucalyptus longicornis</i> , <i>Eucalyptus salubris</i> , <i>Eucalyptus corrugata</i> , <i>Eucalyptus ravida</i> and <i>Eucalyptus moderata</i> over <i>Eremophila ionantha</i> , <i>Santalum acuminatum</i> and <i>Templetonia sulcata</i> over <i>Olearia muelleri</i> on clay-loam soils on lower slopes and flats.
W7	Woodland of <i>Eucalyptus yilgarnensis</i> , <i>Eucalyptus horistes</i> , <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> , <i>Eucalyptus transcontinentalis</i> and <i>Eucalyptus oleosa</i> subsp. <i>oleosa</i> over <i>Eremophila caperata</i> and <i>Acacia multisepala</i> and <i>Halgania andromedifolia</i> over <i>Triodia irritans</i> and <i>Amphipogon caricinus</i> on orange to yellow sandy clay soils on flats.
W11	Open Woodland of <i>Eucalyptus salmonophloia</i> over <i>Cratystylis subspinescens</i> over <i>Atriplex vesicaria</i> on red-brown clay flats.
W12	Open Woodland of <i>Eucalyptus sheathiana</i> , <i>Eucalyptus salubris</i> , <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> , <i>Eucalyptus ravida</i> and <i>Eucalyptus salmonophloia</i> over <i>Acacia burkittii</i> , <i>Eremophila ionantha</i> , <i>Senna artemisioides</i> subsp. <i>filifolia</i> and <i>Acacia colletioides</i> over <i>Grevillea acuaria</i> on red-brown clay to sandy clay on flats with scattered ironstone pebbles.
W13	Low Woodland of <i>Eucalyptus corrugata</i> and <i>Eucalyptus sheathiana</i> over <i>Acacia burkittii</i> , <i>Alyxia buxifolia</i> and <i>Eremophila oppositifolia</i> subsp. <i>angustifolia</i> over <i>Ptilotus obovatus</i> var. <i>obovatus</i> , <i>Scaevola spinescens</i> and <i>Olearia muelleri</i> on flat red clay soils.

Table 1: Summary of Vegetation Mapping Units recorded along the proposed Carina Transport Route (Cont).

Mapping Code	Description
W14	Low Woodland of <i>Eucalyptus corrugata</i> and <i>Eucalyptus oleosa</i> subsp. <i>oleosa</i> over <i>Allocasuarina campestris</i> , <i>Acacia burkittii</i> , <i>Acacia sibina</i> and <i>Grevillea obliquistigma</i> subsp. <i>obliquistigma</i> over <i>Phebalium canaliculatum</i> , <i>Olearia exiguifolia</i> , <i>Halgania andromedifolia</i> and <i>Baeckea elderiana</i> over <i>Triodia irritans</i> on orange-brown clay soils on flats.
W15	Low Woodland of <i>Eucalyptus corrugata</i> , <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> and <i>Eucalyptus longicornis</i> over <i>Acacia burkittii</i> , <i>Allocasuarina campestris</i> and <i>Exocarpos aphyllus</i> over <i>Senna artemisioides</i> subsp. <i>filiifolia</i> , <i>Philotheeca tomentella</i> , <i>Prostanthera grylloana</i> , <i>Templetonia sulcata</i> and <i>Philotheeca brucei</i> subsp. <i>brucei</i> over <i>Grevillea acuaria</i> and <i>Scaevola spinescens</i> on red-brown clay soils on flats.
W16	Low Woodland of <i>Eucalyptus corrugata</i> , <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> and <i>Eucalyptus longicornis</i> over <i>Acacia colletioides</i> , <i>Acacia tetragonophylla</i> , <i>Eremophila oldfieldii</i> subsp. <i>angustifolia</i> , <i>Exocarpos aphyllus</i> and <i>Eremophila ionantha</i> over <i>Scaevola spinescens</i> over <i>Amphipogon caricinus</i> on orange clay soils on lower slope and flats.
W17	Low Woodland of <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> over <i>Acacia burkittii</i> , <i>Phebalium canaliculatum</i> , <i>Philotheeca brucei</i> subsp. <i>brucei</i> , <i>Eremophila granitica</i> and <i>Baeckea elderiana</i> over <i>Scaevola spinescens</i> and <i>Prostanthera grylloana</i> on orange-brown sandy clay flats.
W18	Low Woodland of <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> over <i>Acacia burkittii</i> , <i>Acacia resinimarginea</i> and <i>Leptospermum ?fastigiatum</i> over <i>Phebalium filifolium</i> and <i>Westringia cephalantha</i> over <i>Triodia irritans</i> and <i>Amphipogon caricinus</i> on orange-brown clay flats with soils with ironstone pebbles.
W19	Low Woodland of <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> and <i>Eucalyptus corrugata</i> over <i>Acacia ramulosa</i> , <i>Melaleuca leiocarpa</i> and <i>Acacia burkittii</i> over <i>Olearia muelleri</i> over <i>Amphipogon caricinus</i> on red-brown clay flats with mafic schist rocks and ironstone pebbles.
W20	Low Woodland of <i>Eucalyptus oleosa</i> subsp. <i>oleosa</i> , <i>Eucalyptus sheathiana</i> , <i>Eucalyptus corrugata</i> and <i>Eucalyptus longicornis</i> and mixed Eucalypts over <i>Eremophila scoparia</i> , <i>Eremophila ionantha</i> and <i>Acacia burkittii</i> over <i>Atriplex vesicaria</i> and <i>Olearia muelleri</i> on red-brown clay flats.
W21	Open Low Woodland of <i>Eucalyptus capillosa</i> subsp. <i>capillosa</i> , <i>Eucalyptus corrugata</i> , <i>Eucalyptus delicata</i> and <i>Eucalyptus longicornis</i> over <i>Eremophila ionantha</i> , <i>Senna artemisioides</i> subsp. <i>filiifolia</i> , <i>Acacia colletioides</i> and <i>Eremophila scoparia</i> over <i>Olearia muelleri</i> and <i>Atriplex vesicaria</i> on red-brown sandy clay flats.
W22	Open Low Woodland of <i>Eucalyptus corrugata</i> with mixed Eucalypts over <i>Allocasuarina campestris</i> and <i>Acacia burkittii</i> over <i>Alyxia buxifolia</i> , <i>Philotheeca brucei</i> subsp. <i>brucei</i> and <i>Isopogon gardneri</i> over <i>Scaevola spinescens</i> and <i>Olearia muelleri</i> on red-brown clays soils on mid and lower slopes.
W23	Open Low Woodland of <i>Eucalyptus corrugata</i> and <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> over <i>Melaleuca hamata</i> <i>Acacia sibina</i> and <i>Acacia resinimarginea</i> over <i>Baeckea elderiana</i> , <i>Grevillea georgeana</i> (P3) and <i>Malleostemon roseus</i> on red-brown clay soils on lower slopes and flats.
W24	Open Low Woodland of <i>Eucalyptus corrugata</i> , <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> , <i>Eucalyptus salubris</i> , <i>Eucalyptus pileata</i> and mixed Eucalypts over <i>Acacia burkittii</i> , occasional patches of <i>Callitris preissii</i> over <i>Phebalium filifolium</i> , <i>Prostanthera grylloana</i> over <i>Grevillea acuaria</i> and <i>Triodia irritans</i> on red to yellow sandy clay flats.
W25	Open Low Woodland of <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> over <i>Allocasuarina campestris</i> , <i>Acacia tetragonophylla</i> and <i>Acacia assimilis</i> over <i>Philotheeca brucei</i> subsp. <i>brucei</i> , <i>Grevillea georgeana</i> (P3) and <i>Leucopogon</i> sp. Clyde Hill (M.A. Burgman 1207) over <i>Scaevola spinescens</i> and <i>Prostanthera grylloana</i> on red-brown clay-loam lower slopes with scattered quartz pebbles.
W26	Open Low Woodland of <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> over <i>Acacia burkittii</i> , <i>Acacia tetragonophylla</i> , <i>Santalum spicatum</i> and <i>Eremophila oppositifolia</i> subsp. <i>angustifolia</i> over <i>Olearia pimeleoides</i> and <i>Scaevola spinescens</i> on red-brown clay-loam on lower slopes and flats.
W27	Open Low Woodland of <i>Eucalyptus yilgarnensis</i> and <i>Eucalyptus horistes</i> over <i>Hakea francisiana</i> , <i>Acacia sibina</i> and <i>Allocasuarina corniculata</i> over <i>Verticordia ?helmsii</i> , <i>Leucopogon</i> sp. ?Coolgardie (M.Hislop & F.Hort MH 3197) over <i>Triodia ?desertorum</i> on yellow sandy flats.

6. DISCUSSION

The Carina Exploration Tenement lies wholly within the Coolgardie Botanical District, as defined by Beard (1972; 1990). This corresponds with the Coolgardie 2 Bioregion (COO2 – Southern Cross subregion) as defined by the Interim Biogeographical Regionalisation for Australia (IBRA) (Cowan *et al.* 2001). The Coolgardie District experienced below average rainfall in the five months that proceeded the month in which this survey was conducted (Bureau of Meteorology 2008). Compared to the long-term average for the district, the Coolgardie district received 85% of the average rainfall for the months February 2008 – June 2008. The present survey work was carried out in July 2008 and it is likely that there was a good representation of annual flora due to the combination of near average rainfall and the season during which the survey was undertaken.

The 237 taxa recorded during the survey, represent taxa previously reported by others as being typical of taxa found in the Coolgardie District (Gibson & Lyon 1997a, 1997b, 1997c, 2001; Gibson *et al.* 1997, 2007; Mattiske 2008a). In addition, the majority of the taxa recorded during the present survey have previously been recorded during surveys of Polaris Metals tenements by Mattiske Consulting Pty. Ltd. (2007 a; b; c; d; e; f, 2008a; b; c; d; e; f; g; h, i). The results of the survey of the proposed Carina Tenement are consistent with taxa which would be expected to be encountered in a survey of this area.

No plant taxa gazetted as Declared Rare Flora pursuant to subsection (2) of section 23F of the *Wildlife Conservation Act 1950* (WA) (Department of Environment and Conservation, 2008f) or listed as Threatened pursuant to Schedule 1 of the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth) (Department of the Environment, Water, Heritage and the Arts 2008b) were recorded during the survey within the Carina Exploration Tenement.

Six plant taxa listed as a Priority species by the Department of Environment and Conservation (2008d) were recorded within the Carina Exploration Tenement. These six species were *Pseudactinia* sp. Bungabbin Hill (F.H. & M.P. Molemans 3069) (P1), *Acacia crenulata* (P3), *Acacia eremophila* var. *variabilis* (P3), *Grevillea georgeana* (P3), *Spartothamnella* sp. Helena and Aurora Range (P3) and *Daviesia purpurascens* (P4). In addition, one new undescribed species of *Acacia* was recorded in the Carina Exploration Tenement. This latter new species was confirmed by the *Acacia* expert, Dr Bruce Maslin.

In terms of potential impact, it is difficult at this juncture to discuss implications of the proposed Carina mine as no foot print was available at this juncture to assess the likely impacts on the Priority flora, the new undescribed species of *Acacia* and the communities that support species that are restricted to ironstone areas.

Two introduced (exotic) species were recorded within the proposed Carina Exploration Tenement. The taxa were *Erodium cicutarium* and *Erodium botrys*. The presence of rabbits in the area would not assist in the management of these species as there is potential to spread seed in wider areas through their activities.

Beard (1972) described the woodland communities of the area as a *Eucalyptus salmonophloia* – *Eucalyptus salubris* association, together with *Eucalyptus sheathiana*, *Eucalyptus longicornis*, *Eucalyptus corrugata*, *Eucalyptus gracilis* and *Eucalyptus oleosa*. The understorey, according to Beard (1972) is described as a Broombrush understorey. Whilst Beard's (1972) mapping was at a scale of 1:250,000, the survey data for the Carina Tenement in general terms reflects Beard's historic data. More recent floristic surveys of the area by Gibson and Lyons (1997a; 1997c) also reflect the vegetation community types reported for the Carina area.

Beard (1972) also described scrub and thicket communities in the area, which were composed of species, which have been recorded during the vegetation survey for the proposed Carina Tenement area. These include the taxa *Acacia burkittii*, *Acacia resinimarginea*, *Acacia quadrimarginea*, together with *Hakea preissii* and *Brachychiton gregorii*. In addition, more recent surveys, such as that of Gibson and Lyons (1997a; 1997c), provide additional data, which supports the proposal that, the vegetation recorded during the present survey is consistent with that which has been previously observed and recorded.

Gibson *et al.* (1997) highlighted two main communities on the ridge tops and upper slopes of the Helena and Aurora Range. To enable a comparison of data from Gibson *et al.* (1997) with some of the banded iron formations, PATN analyses with the presence data from the community types as defined by Gibson *et al* (1997) was undertaken with the results from the botanical assessment of the Carina Exploration Tenement. As needed taxonomic names were updated in line with recent changes and where subspecies or varieties were defined then these were considered to be comparable with those defined by the Mattiske team. These analyses reflect that there is some overlap between the S2 community and the community types G1 and G2 as defined by Gibson *et al.* (1997) (delineated as 1 and 2 types in the Gibson *et al.* 1997 article), Appendix G. The latter raises a range of issues associated with the PEC Helena and Aurora community as defined by the Department of Environment and Conservation (2008e). The G6 (community type 6 as defined by Gibson et al. (1997) also was slightly aligned with W11. The woodland communities appeared to be more distinct from the Gibson communities.

The S2 community is therefore represented south of the proposed disturbance area. Further the Priority species (*Grevillea georgeana* (P3) and *Daviesia purpurascens* (P4)) that occur within the proposed mining area also occur in other areas that will not be disturbed. The undescribed and new species of Acacia sp. nov was recorded on the southern occurrence of the S2 community. Despite searching in the proposed mining area no plants of this new species were recorded in the northern occurrence of the S2 community. Therefore it is unlikely that the disturbance of the northern communities as highlighted will influence overall conservation status of the two Priority species recorded within the proposed mining areas.

The proposed mining area (Figure 1) overlaps a section of S2, W2, W4, W12 and W22. An analysis of the proportion of these respective communities that may be disturbed is summarized in the Table 2.

Table 2: Review of the Potential Impact of Disturbance from Proposed Mining Activities on the Respective Plant Communities

Plant Community	Area in Proposed Mining (ha)	Area in Carina Tenement Area (ha)	% of Extent in Proposed Mining Envelope
S2	8.63	113.70	7.59%
W2	64.37	4898.42	1.31%
W4	14.19	1470.61	0.96%
W12	20.27	721.18	2.81%
W22	109.50	543.93	20.13%
Total	216.96	20364.54	1.06%

7. RECOMMENDATIONS

The following recommendations are proposed to reduce the disturbance to the surrounding area:

- Ground disturbance and clearing of vegetation should be limited to that which is essential;
- Maintain standard vehicle hygiene practices to minimise the risk of spreading introduced (exotic) weeds;
- Retain and stockpile topsoil for use in the later rehabilitation of roads and other areas cleared in the process of mining;
- Maintain existing drainage systems, i.e. do not allow roads etc. to disrupt or divert historic water flow patterns. Where drainage systems are interrupted by road works, the use of culverts to assist in maintaining natural water flow patterns should be implemented;
- Avoid driving vehicles across undisturbed ground;
- Negotiate rabbit control with the Department of Environment and Conservation officers.
- The creation of new tracks should be restricted to that which is absolutely necessary, ensuring equipment blades are set above ground level to minimize disturbance to topsoil, rootstock and to reduce soil erosion.

8. ACKNOWLEDGEMENTS

The authors would like to thank Jonathon Lea, Derrick Kettlewell, Jim Nicholson, Chris Wilcox and Monique Howlett from Polaris Metals NL; Lorna Davies and Jessica Taylor from Coffey Natural Systems; Allan White, Brian White and Adam White from CADResources; Malcolm Trudgen and Michael Hislop from the Western Australian Herbarium for their assistance throughout this project.

9. LIST OF PARTICIPANTS

The following personnel of Mattiske Consulting Pty Ltd have been involved with this project:

Principal Ecologist: Dr. E. M. Mattiske

Senior Botanist: Mrs. B. Koch

Senior Ecologist: Dr. F. Itzstein-Davey

Experienced Botanists: Mr. D. Angus
Ms. M. van Wees
Ms. R. Chesney
Ms. K. Rose
Ms. F. Smith
Ms. F. de Wit

Technical Assistants: Mr. C. Blackburn
Mr T. Rose

APPENDIX A1: DEFINITION OF RARE AND PRIORITY FLORA SPECIES (Department of Environment and Conservation 2008b)

Conservation Code	Category
R	<p>Declared Rare Flora – Extant Taxa</p> <p>“Taxa which have been adequately searched for and are deemed to be in the wild either rare, in danger of extinction, or otherwise in need of special protection and have been gazetted as such.”</p>
P1	<p>Priority One – Poorly Known Taxa</p> <p>“Taxa which are known from one or a few (generally <5) populations which are under threat, either due to small population size, or being on lands under immediate threat. Such taxa are under consideration for declaration as ‘rare flora’, but are in urgent need of further survey.”</p>
P2	<p>Priority Two – Poorly Known Taxa</p> <p>“Taxa which are known from one or a few (generally <5) populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as ‘rare flora’, but urgently need further survey.”</p>
P3	<p>Priority Three – Poorly Known Taxa</p> <p>“Taxa which are known from several populations, and the taxa are not believed to be under immediate threat (i.e. not currently endangered), either due to the number of known populations (generally >5), or known populations being large, and either widespread or protected. Such taxa are under consideration for declaration as ‘rare flora’ but need further survey.”</p>
P4	<p>Priority Four – Rare Taxa</p> <p>“Taxa which are considered to have been adequately surveyed and which, whilst being rare (in Australia), are not currently threatened by any identifiable factors. These taxa require monitoring every 5-10 years.”</p>

APPENDIX A2: DEFINITION OF THREATENED FLORA SPECIES (*Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth))

Category Code	Category
Ex	Extinct Taxa which at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.
ExW	Extinct in the Wild Taxa which is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.
CE	Critically Endangered Taxa which at a particular time if, at that time, it is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.
E	Endangered Taxa which is not critically endangered and it is facing a very high risk of extinction in the wild in the immediate or near future, as determined in accordance with the prescribed criteria.
V	Vulnerable Taxa which is not critically endangered or endangered and is facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with the prescribed criteria.
CD	Conservation Dependent Taxa which at a particular time if, at that time, the species is the focus of a specific conservation program, the cessation of which would result in the species becoming vulnerable, endangered or critically endangered within a period of 5 years.

APPENDIX A3: DEFINITION OF THREATENED ECOLOGICAL COMMUNITIES (Department of Environment and Conservation 2008d)

Category Code	Category
PTD	<p>Presumed Totally Destroyed</p> <p>An ecological community will be listed as Presumed Totally Destroyed if there are no recent records of the community being extant and either of the following applies:</p> <ul style="list-style-type: none"> (i) records within the last 50 years have not been confirmed despite thorough searches or known likely habitats or; (ii) all occurrences recorded within the last 50 years have since been destroyed.
CE	<p>Critically Endangered</p> <p>An ecological community will be listed as Critically Endangered when it has been adequately surveyed and is found to be facing an extremely high risk of total destruction in the immediate future, meeting any one of the following criteria:</p> <ul style="list-style-type: none"> (i) The estimated geographic range and distribution has been reduced by at least 90% and is either continuing to decline with total destruction imminent, or is unlikely to be substantially rehabilitated in the immediate future due to modification; (ii) The current distribution is limited ie. highly restricted, having very few small or isolated occurrences, or covering a small area; (iii) The ecological community is highly modified with potential of being rehabilitated in the immediate future.
E	<p>Endangered</p> <p>An ecological community will be listed as Endangered when it has been adequately surveyed and is not Critically Endangered but is facing a very high risk of total destruction in the near future. The ecological community must meet any one of the following criteria:</p> <ul style="list-style-type: none"> (i) The estimated geographic range and distribution has been reduced by at least 70% and is either continuing to decline with total destruction imminent in the short term future, or is unlikely to be substantially rehabilitated in the short term future due to modification; (ii) The current distribution is limited ie. highly restricted, having very few small or isolated occurrences, or covering a small area; (iii) The ecological community is highly modified with potential of being rehabilitated in the short term future.
V	<p>Vulnerable</p> <p>An ecological community will be listed as Vulnerable when it has been adequately surveyed and is not Critically Endangered or Endangered but is facing high risk of total destruction in the medium to long term future. The ecological community must meet any one of the following criteria:</p> <ul style="list-style-type: none"> (i) The ecological community exists largely as modified occurrences that are likely to be able to be substantially restored or rehabilitated; (ii) The ecological community may already be modified and would be vulnerable to threatening process, and restricted in range or distribution; (iii) The ecological community may be widespread but has potential to move to a higher threat category due to existing or impending threatening processes.

APPENDIX A4: DEFINITION OF PRIORITY ECOLOGICAL COMMUNITIES (Department of Environment and Conservation 2008d)

Category Code	Category
P1	Poorly-known ecological communities Ecological communities with apparently few, small occurrences, all or most not actively managed for conservation (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) and for which current threats exist.
P2	Poorly-known ecological communities Communities that are known from few small occurrences, all or most of which are actively managed for conservation (e.g. within national parks, conservation parks, nature reserves, State forest, un-allocated Crown land, water reserves, etc.) and not under imminent threat of destruction or degradation.
P3	Poorly known ecological communities (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or; (ii) Communities known from a few widespread occurrences, which are either large or within significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat, or; (iii) Communities made up of large, and/or widespread occurrences, that may or not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing and inappropriate fire regimes.
P4	Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.
P5	Conservation Dependent ecological communities Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
ADIANTACEAE	<i>Cheilanthes adiantoides</i> <i>Cheilanthes brownii</i> <i>Cheilanthes lasiophylla</i>
CUPRESSACEAE	<i>Callitris canescens</i> <i>Callitris preissii</i>
POACEAE	<i>Amphipogon caricinus</i> ? <i>Amphipogon caricinus</i> <i>Aristida holathera</i> var. <i>holathera</i> <i>Austrostipa elegantissima</i> ? <i>Austrostipa nitida</i> <i>Austrostipa platychaeta</i> <i>Austrostipa</i> sp. <i>Eragrostis dielsii</i> <i>Triodia</i> ? <i>desertorum</i> <i>Triodia irritans</i> Poaceae sp.
CYPERACEAE	<i>Lepidosperma</i> ? <i>bungalbin</i>
DASYPOGONACEAE	<i>Chamaexeros macranthera</i> <i>Lomandra effusa</i>
PHORMIACEAE	<i>Dianella revoluta</i>
ANTHERICACEAE	<i>Thysanotus patersonii</i>
COLCHICACEAE	<i>Wurmbea tenella</i>
BORYACEAE	<i>Borya constricta</i>
CASUARINACEAE	<i>Allocasuarina campestris</i> <i>Allocasuarina corniculata</i> <i>Allocasuarina helmsii</i> <i>Casuarina obesa</i> <i>Casuarina pauper</i>
PROTEACEAE	<i>Banksia arborea</i> <i>Grevillea acuaria</i> <i>Grevillea georgeana</i> (P3) <i>Grevillea huegelii</i> <i>Grevillea juncifolia</i> <i>Grevillea nematophylla</i> subsp. <i>nematophylla</i> <i>Grevillea obliquistigma</i> subsp. <i>obliquistigma</i> <i>Grevillea zygoloba</i> <i>Hakea francisiana</i> <i>Hakea</i> ? <i>recurva</i>

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
	<i>Persoonia coriacea</i>
	<i>Proteaceae</i> sp.

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
SANTALACEAE	<i>Exocarpos aphyllus</i> <i>Santalum acuminatum</i> <i>Santalum spicatum</i>
LORANTHACEAE	<i>Amyema benthamii</i> <i>Amyema miquelii</i> <i>Lysiana casuarinae</i>
CHENOPODIACEAE	<i>Atriplex nummularia</i> <i>Atriplex vesicaria</i> <i>?Dissocarpus paradoxus</i> <i>Enchytraea lanata</i> <i>Maireana tomentosa</i> <i>Maireana trichoptera</i> <i>Maireana triptera</i> <i>Rhagodia drummondii</i> <i>Rhagodia spinescens</i> <i>Sclerolaena diacantha</i> <i>?Sclerolaena diacantha</i> <i>Sclerolaena fusiformis</i>
AMARANTHACEAE	<i>Ptilotus carlsonii</i> <i>Ptilotus drummondii</i> <i>Ptilotus exaltatus</i> var. <i>exaltatus</i> <i>Ptilotus helipteroides</i> var. <i>helipteroides</i> <i>Ptilotus holosericeus</i> <i>Ptilotus obovatus</i> var. <i>obovatus</i>
GYROSTEMONACEAE	<i>Codonocarpus cotinifolius</i>
LAURACEAE	<i>Cassytha melantha</i>
DROSERACEAE	<i>Drosera</i> sp.
PITTOSPORACEAE	<i>Pittosporum angustifolium</i>
MIMOSACEAE	<i>Acacia ?ancistrophylla</i> var. <i>ancistrophylla</i> <i>Acacia andrewsii</i> <i>Acacia aneura</i> var. <i>aneura</i> <i>Acacia assimilis</i> <i>Acacia assimilis</i> subsp. <i>assimilis</i> <i>Acacia burkittii</i> <i>Acacia colletioides</i> <i>Acacia coolgardiensis</i> <i>Acacia crenulata</i> (P3) <i>Acacia eremophila</i> var. <i>variabilis</i> (P3) <i>Acacia erinacea</i> <i>Acacia ?graniticola</i>

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
	<i>Acacia jennerae</i>

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
MIMOSACEAE (continued)	<i>Acacia merrallii</i> <i>Acacia minyura</i> <i>Acacia multispicata</i> <i>Acacia prainii</i> <i>Acacia quadrimarginea</i> <i>Acacia ramulosa</i> <i>Acacia resinimarginea</i> <i>Acacia ?rigens</i> <i>Acacia sibina</i> <i>Acacia tetragonophylla</i> Acacia undescribed (B.Maslin) <i>Acacia yorkrakinensis</i> <i>Acacia</i> sp.
CAESALPINIACEAE	<i>Senna artemisioides</i> subsp. <i>filifolia</i>
PAPILIONACEAE	<i>Bossiaea walkeri</i> <i>Daviesia benthamii</i> subsp. <i>acanthoclona</i> <i>Daviesia purpurascens</i> (P4) <i>Glycyrrhiza acanthocarpa</i> <i>Mirbelia microphylla</i> <i>Swainsona colutoides</i> <i>Templetonia sulcata</i>
GERANIACEAE	* <i>Erodium botrys</i> * <i>Erodium cicutarium</i>
ZYGOPHYLLACEAE	<i>Zygophyllum apiculatum</i> <i>Zygophyllum ?compressum</i> <i>Zygophyllum iodocarpum</i> <i>Zygophyllum</i> sp. (juv)
RUTACEAE	<i>Phebalium canaliculatum</i> <i>Phebalium filifolium</i> <i>Phebalium lepidotum</i> <i>Phebalium megaphyllum</i> <i>Phebalium tuberculosum</i> <i>Philotheca brucei</i> subsp. <i>brucei</i> <i>Philotheca rhomboidea</i> <i>Philotheca tomentella</i>
POLYGALACEAE	<i>Comesperma ?volubile</i>
EUPHORBIACEAE	<i>Beyeria brevifolia</i> <i>Beyeria brevifolia</i> var. <i>robustior</i> <i>Beyeria calycina</i> var. <i>minor</i> <i>Calycopeplus paucifolius</i> <i>Euphorbia drummondii</i>

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
SAPINDACEAE	<i>Diplopeltis huegelii</i> <i>Dodonaea lobulata</i> <i>Dodonaea microzyga</i> var. <i>acrolobata</i> <i>Dodonaea stenozyga</i> <i>Dodonaea viscosa</i> subsp. <i>angustissima</i> <i>Dodonaea viscosa</i> subsp. <i>mucronata</i>
RHAMNACEAE	<i>Cryptandra aridicola</i> <i>Stenanthesmum stipulosum</i>
MALVACEAE	<i>Hibiscus sturtii</i> <i>Radyera farragei</i> <i>Sida intricata</i> <i>Sida spodochroma</i>
STERCULIACEAE	<i>Brachychiton gregorii</i> <i>Keraudrenia velutina</i> subsp. <i>elliptica</i>
DILLENIACEAE	<i>Hibbertia eatoniae</i>
VIOLACEAE	<i>Hybanthus floribundus</i> subsp. <i>curvifolius</i>
THYMELIACEAE	<i>Pimelea microcephala</i> subsp. <i>microcephala</i>
MYRTACEAE	<i>Baeckea crispiflora</i> <i>Baeckea elderiana</i> <i>Baeckea muricata</i> <i>Calothamnus gilesii</i> <i>Eucalyptus capillosa</i> subsp. <i>capillosa</i> <i>Eucalyptus celastroides</i> subsp. <i>celastroides</i> <i>Eucalyptus celastroides</i> subsp. <i>virella</i> <i>Eucalyptus corrugata</i> <i>Eucalyptus delicata</i> <i>Eucalyptus ebbanoensis</i> <i>Eucalyptus ewartiana</i> <i>Eucalyptus gracilis</i> <i>Eucalyptus griffithsii</i> <i>Eucalyptus horistes</i> <i>Eucalyptus leptopoda</i> subsp. <i>subluta</i> <i>Eucalyptus longicornis</i> <i>Eucalyptus loxophleba</i> subsp. <i>lissophloia</i> <i>Eucalyptus loxophleba</i> subsp. <i>supralaevis</i> <i>Eucalyptus moderata</i> <i>Eucalyptus oleosa</i> subsp. <i>oleosa</i> <i>Eucalyptus pileata</i> <i>Eucalyptus platycorys</i> <i>Eucalyptus ravida</i> <i>Eucalyptus salmonophloia</i>

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
	<i>Eucalyptus</i> sp.

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115

Note: * denotes introduced species; P1, P2, P3 and P4 denote - Priority Flora Species (DEC, 2008a)

Family	Species
MYRTACEAE (continued)	<i>Eucalyptus stricklandii</i> <i>Eucalyptus transcontinentalis</i> <i>Eucalyptus trichopoda</i> <i>Eucalyptus yilgarnensis</i> <i>Euryomyrtus maidenii</i> <i>Leptospermum ?fastigiatum</i> <i>Malleostemon roseus</i> <i>Melaleuca eleuterostachya</i> <i>Melaleuca hamata</i> <i>Melaleuca leiocarpa</i> <i>Melaleuca nematophylla</i> <i>Melaleuca uncinata</i> (complex) <i>Melaleuca vinnula</i> <i>Rinzia carnosa</i> <i>Thryptomene kochii</i> <i>Verticordia ?helmsii</i>
HALORAGACEAE	<i>Glischrocaryon aureum</i> <i>Gonocarpus confertifolius</i> var. <i>confertifolius</i> <i>Haloragis gossei</i>
EPACRIDACEAE	<i>Leucopogon</i> sp. Clyde Hill (M.A. Burgman 1207) <i>Leucopogon</i> ?sp. Coolgardie (M. Hislop & F. Hort MH 3197) <i>Pseudactinia</i> sp. Bungabbin Hill (F. H. & M. P. Molemans 3069) (P1)
APOCYNACEAE	<i>Alyxia buxifolia</i>
BORAGINACEAE	<i>Halgania andromedifolia</i>
LAMIACEAE	<i>Hemigenia</i> sp. Sticky Terete (B. H. Smith 449) <i>Hemiphora elderi</i> <i>Lachnostachys coolgardiensis</i> <i>Physopsis viscida</i> <i>Prostanthera campbellii</i> <i>Prostanthera grylloana</i> <i>Spartothamnella</i> sp. Helena and Aurora Range (P3) <i>Westringia cephalantha</i> <i>Westringia rigida</i>
SOLANACEAE	<i>Solanum hoplopetalum</i> <i>Solanum lasiophyllum</i> <i>Solanum nummularium</i> <i>Solanum orbiculatum</i> subsp. <i>orbiculatum</i> <i>Solanum plicatile</i>
MYOPORACEAE	<i>Eremophila alternifolia</i> <i>Eremophila caperata</i> <i>Eremophila decipiens</i>

APPENDIX B: SUMMARY OF VASCULAR PLANT SPECIES RECORDED AT SURVEY SITES WITHIN EXPLORATION TENEMENT E77/1115
