B S 1 (1–3) ← Number of Banksia species at this Locality (4–43)

Additional Remarks:
Most of the area burnt in Ash Wednesday bush fire. None of these sprouting had any signs of flowers or cones. Some unburnt specimens had old cones.
Again banksia tended to be clustered rather than evenly spread throughout zone.

B S 1 (1–3) ← Number of Banksia species at this Locality (4–43)

Additional Remarks: Five Banksias growing in clump with Myoporum, surrounded by grass and rank weed growth. Four oldest trees have been cut back because of overhead power lines. Oldest trees to 1·5 m. diam. at base. Trees are healthy, have flowered and seeded freely, but no seedlings apparent apart from smallest of the five, now 6 metres high.

BS 1 (1–3) ← Number of Banksia species at this Locality (4–43)

Additional Remarks: I assume all 13 plants at this spot location are seedlings. They all look approx the same age. There was one 20' old dead tree ~~also~~, with many cones all seed released. The banksias looked more like integrifolia with its upright habit, fewer branches, trunk appearance and broad large leaf size. But I have seen many young marginata like that before. Also ~~one~~ 3 of the trees had flowered and the ~~cones~~ cones, as was the mature dead tree were those of marginata.

BS 3 (1–3) ← Number of Banksia species at this Locality (4–43)

Additional Remarks: For sheets 16, 17 + 18: Banksia ~~scrub~~ woodland grows continuously for 25km from the Loch sport turn off to Loch sport itself. B. serrata is the dominant species as viewed from the car & Shrub marginata also runs the full 25km. Integrifolia and tree marginata are intermittent in their numbers as viewed from the road. This may be because the road varies from 3½ – ½km from the lake edge. The closer to the lake edge ~~there~~ Integrifolia and tree (see 17)

Additional Remarks: (from sheet 16) Marginata gain dominance. where the two grew together their similarity is remarkable. About 11-16 km out of Lochsport. Serrata becomes less numerous and a Mallee type gum increases and at 16 km tree Marginata becomes dominant. This area is South of the Lochsport Rd. The Banksia woodland is intermittent on the Northern side of the road, as it was once cleared. pre National Park days.
