## RFA Forest Taxa

The following list was prepared from the herbariums records using SEDIT as a spell check and a data base. The 3 forest areas were divided into discrete arbitrary blocks of known longitudes and latitudes and the taxa in each recorded. From these records taxa occurring in all 3 designated forest areas are listed with a code for each forest. The northern forest is designated as 'a' with 'b' as the central and 'c' as the southern forests. From the prepared list the following data is obtained:

145 families are represented in the areas.3120 species are represented.481 introduced (weed) species area represented.

The number of species occurring either exclusively or with various overlaps are as follows:

northern (a) 514 species occur only. central (b) 128 species occur only. southern (c) 1132 species occur only species occurring in all 3 forests 617. species common in a & b 172. species common in a & c 323. species common in b & c 332.
