**September 2001**

- These three volumes titled “*A flora, vegetation and floristic survey of the Burrup Peninsula, some adjoining areas and part of the Dampier Archipelago, with comparisons to the floristics of areas on the adjoining mainland – Prepared by M.E. Trudgen & Associates for The Department of Mineral & Petroleum Resources*” were collated from original files in .doc and .xls formats supplied by Mr. Malcolm Trudgen on 14 August 2020. Some minor corrections were also made to the “Table of Contents” and “page numbers” in the texts.
- Copyright or other such rights was conferred to the Department of Jobs, Tourism, Science and Innovation (JTISI) of the Government of Western Australia on 21 August 2020.
- Enquiries on the usage of these reports and their related data should be directed to the Department of Jobs, Tourism, Science and Innovation (JTISI).

The “**Table of Contents**” and “**Introduction**” in Volume 3 were not supplied with the original data. They were compiled in August 2020.

## INTRODUCTION

Volume three contains the site data recorded during the study and floristic data for the sites recorded by CALM on the Burrup Peninsula (the plant collections for these sites were identified as part of the current study to include any extra species recorded and to make the data available for analysis. The photographs of the sites recorded are also included in Volume three  
**(Extracted from Volume 2, p. 1 - 2)**

## **APPENDIX 1: Quadrat data collected during the Burrup Peninsula flora study**

Site and flora data collected as part of the Burrup Peninsula flora, vegetation and floristic survey is shown in this appendix. Site data is presented under their respective survey areas, sampled as part of the Burrup Peninsula study. The survey areas are ordered alphabetically. The Burrup Peninsula study survey areas were Angel Island (A), Burrup Peninsula (B), Dolphin Island (D), Gidley Island (G), Hamersley Iron rail line (HR), Harding Dam (HD), Karratha Hills (KH/KA) and Whim Creek (W) (see Figure 1, Volume 1, Trudgen 2002).

For each survey area, sites are listed numerical (numbers after the survey area code).

## Angel Island quadrats

**Angel Island**            **Site**    A113

**Described by** MET            **Date**        31/05/00

**Location**        Crest near south end of Angel Island

**Air Photo**                    **Photo**        11                    **on Roll**    M2    **Video**    Y    **E Photo**        207,208

**Photo Notes**

**AMG Zone**    50 478399mE, 7733579mN 478377mE, 7733489mN 478421mE, 7733421mN 478647mE, 7733446mN

**Habitat**        Crest of a ridge and upper slopes, a strip of *Triodia* between two outcrop strips.

**Soil**            Light brown loam, some coarse sandgrains between pebbles and cobbles. About 60-70% of the surface is cobbles/pebbles, some small areas of outcrop.

**Rock Type**    Medium grained volcanic.

**Vegetation**    *Tephrosia rosea* var *clementii* scattered low shrubs over *Triodia epactia* (Burrup form), *Themeda* sp. Burrup (B84) hummock/tussock grassland.

**Veg Condition** Excellent.

**Fire Age**        >10 years.

**Notes**            Indigofera only in NW corner, Sorghum only in SW corner.

**Rock Pile Notes**

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Bonamia media</i> var. <i>villosa</i>	+	<1 %	5 cm	A113-15	
	<i>Bulbostylis barbata</i>	+	<1 %	3-5 cm		
	<i>Corchorus walcottii</i>	+	<1 %	15-30 cm	A113-2	
	<i>Eriachne obtusa</i>	+	<1 %	45 cm	A113-5	
	<i>Euphorbia biconvexa</i>	+	<1 %	20 cm	A113-11

	<i>Rhynchosia</i> cf. <i>minima</i>	+	<1 %	35 cm	A113-7	
	<i>Sorghum plumosum</i>	+	<1 %	50-80 cm	A113-1	
	<i>Striga curviflora</i>	+	<1 %	12 cm	A113-14	
	<i>Tephrosia rosea</i> var. <i>clementii</i>	<1	<1 %	20-65 cm		
	<i>Themeda</i> sp. Burrup (B84)	>=15	10-25%	30-50 cm	A113-6	
	<i>Triodia angusta</i> (Burrup Form)	+	<1 %	30 cm		
	<i>Triodia epactia</i> (Burrup Form)	>30%	25-33.3%	30-20 cm	A113-13	
	<i>Triumfetta maconochieana</i>		<1 %			

**Angel Island**            **Site**    A120

**Described by** ASW            **Date**        31/05/00

**Location**        Saddle between two watercourses. 265 degrees to centre of beach.

**Air Photo**                    **Photo**        Y                    **on Roll**    AS    **Video**    N    **E Photo**

**Photo Notes**    00, 0 (Peg 1), 1 (Peg 2).

**AMG Zone**    50 479305mE, 7733720mN 479334mE, 7733658mN 479348mE, 7733705mN 479288mE, 7733873mN

**Habitat**        Rise between two drainages and gentle upper NE and SW slopes. Flat to gently sloping on either side.

**Soil**            Red, fine, clayey with ~50% gravel.

- Rock Type** 1) Coarse grain, platy structure, often with quartz grains in it. (2) Fine grained, dark, angular to subangular - the bigger cobbles.
- Vegetation** *Triodia epactia* (Burrup form), *Themeda* sp. Burrup (B84), *Sorghum plumosum* hummock/tussock grassland.
- Veg Condition** Excellent.
- Fire Age** Probably between 1994 and 1997.
- Notes** A few dead shrubs are along line near PEGS 1 and 2, possibly *Acacia orthocarpa* or *A. arida*, which are live further down slope.  
Excludes the SE (Peg 2 corner), which is on small rockpile and has *Ipomoea costata*, *Rhagodia eremaea* and *Mukia maderaspatana*.

**Rock Pile Notes****Species List:**

**Angel Island Site A126**

- Described by** VLL **Date** 31/05/00 **30 x 75 m**
- Location** Towards the N end of Angel Island, above surfers' beach before rockpile/hillslope (W side).
- Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**
- Photo Notes**
- AMG Zone** 50 479393mE, 7734575mN 479402mE, 7734604mN 479371mE, 7734552mN 479389mE, 7734621mN
- Habitat** Steep stony, rocky hillslope, densely vegetated, facing NE.
- Soil** Sandy brown-red.
- Rock Type** Small-medium sized rocks beneath medium-dense vegetation.
- Vegetation** *Ipomoea costata*, *Corchorus walcottii* scattered low shrubs over *Triodia epactia* (Burrup form), *Triodia angusta* (Burrup form), *Themeda* sp. Burrup (B84), *Sorghum plumosum* closed hummock/tussock grassland with *Rhynchosia* cf. *minima* very open lianes.
- Veg Condition** Excellent - no weeds.
- Fire Age** N/A
- Notes** Transect 30 x 75 down slope to fit in beneath gullies. Relatively dense and full *Triodia epactia* (Burrup form), with patches of *Triodia angusta* (Burrup form) (tall and dense), plus tussocks of *Sorghum plumosum*. Herbs mainly on occasional bare stony areas or entwined with *Triodia*.

**Rock Pile Notes****Species List:**

<i>Triodia epactia</i> (Burrup Form)	70-80	>75%	40-60 cm	A126-10	

## Angel Island Site A127

**Described by** VLL **Date** 31/05/00

**Location** Rockpile on steep slope immediately W of A126, towards N end of Angel Island (W side).

**Air Photo** **Photo** 17 **on Roll** F2 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 479341mE, 7734589mN

**Habitat** Rockpile on top of steep slope, medium-large jointed fine grained red rhyadocite - E facing very exposed to strong E winds and sea breezes - salt spray from beach 600 m below probable.

**Soil** Only in small pockets, skeletal.

**Rock Type** Medium-large jointed rhyadocite (red-brown and grey inside).

**Vegetation** *Ipomoea costata* open shrubland over *Themeda* sp. *Burrup* (B84), *Paspalidium tabulatum* scattered tussock grasses with *Canavalia rosea* very open lianes.

**Veg Condition** Excellent - no weeds.

### Fire Age

**Notes** Sample only included rockpile and small pockets. It did not include grassed narrow corridors running up rockpile. Site is very exposed and probably slightly salt spray impacted from long beach below.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Canavalia rosea</i>	5-10	5-10%	4 m		sprawling
	<i>Capparis spinosa</i> var. <i>nummularia</i>	+	<1 %	45 cm		
	<i>Ficus opposita</i> var. <i>indecora</i>	+	<1 %	1.5 m	A127-2	
	<i>Flueggea virosa</i> subsp. <i>melanthesoides</i>	+	<1 %	1.5		
	<i>Indigofera trita</i>	+	<1 %	30-35 cm		

<i>Ipomoea costata</i>	<5	1-5%	1 m		
<i>Mukia maderaspatana</i>	+	<1 %	1 m	A127-1	vine
<i>Paspalidium tabulatum</i> (Burrup Form)	+	<1 %	40 cm		
<i>Rhagodia preissii</i> subsp. <i>obovata</i>	<2	1-5%	1.25 m		
<i>Sorghum plumosum</i>	+	<1 %	50 cm		Not usual habitat.
<i>Themeda</i> sp. Burrup (B84)	+	<1 %	30 cm		
<i>Tinospora smilacina</i>	+	<1 %	40 cm		vine
<i>Trachymene</i> aff. <i>oleracea</i> (B61)	+	<1 %	45 cm	A127-3	
<i>Trichodesma zeylanicum</i> var. <i>zeylanicum</i>	+	<1 %	1 m		
<i>Trichosanthes cucumerina</i>	+	<1 %	1.5 m		

## Angel Island Site A128

**Described by** VLL **Date** 31/05/00 **50 x 2-4 m**

**Location** West end surfers' beach, drainage gully beneath sites A126 and A127 (W side Angel)

**Air Photo** **Photo** 18 **on Roll** F2? **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 479342mE, 7734638mN

**Habitat** Shallow drain running from higher *Triodia epactia* (Burrup form) slopes down to swale and beach. Stony, with cobbles and small rocks.

**Soil** Sandy, grey-brown.

**Rock Type** Cobbles and small rocks, grey; soil deeper towards lower end of drain.

**Vegetation** *Triodia angusta* (Burrup form) hummock grassland with *Stemodia grossa* open herbland.

**Veg Condition** Excellent - no weeds.

**Fire Age** N/A

**Notes** Gully is narrow and cobbly on upper slope; becomes broader and more densely grassed at lower slopes. Sample stopped when grassed area became too obviously different. Sample only 2-4 m x 50 m.

**Rock Pile Notes** See sketch on A127.

### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Acacia orthocarpa</i>	+	<1 %			lower drain
	<i>Bulbostylis barbata</i>	+	<1 %	20 cm		
	<i>Canavalia rosea</i>	+	<1 %	1 m		spreading
	<i>Corchorus walcottii</i>	+	<1 %	35 cm		
	<i>Cynanchum floribundum</i>	+	<1 %			lower drain
	<i>Gomphrena cunninghamii</i>	+	<1 %	10 cm		
	<i>Goodenia microptera</i>	+	<1 %	30 cm		
	<i>Indigofera linifolia</i>	+	<1 %	25 cm		
	<i>Indigofera trita</i>	+	<1 %	40 cm		
	<i>Mukia maderaspatana</i>	+	<1 %			
	<i>Panicum decompositum</i>	+	<1 %	50 cm	A128-3	
	<i>Phyllanthus maderaspatensis</i> var. <i>angustifolius</i>	+	<1 %	20 cm		
	<i>Pluchea rubelliflora</i>	+	<1 %	40 cm	A128-1	
	<i>Pterocaulon sphacelatum</i>	+	<1 %	35 cm		
	<i>Rhynchosia</i> cf. <i>minima</i>	+	<1 %	20 cm		grey-green
	<i>Sorghum plumosum</i>	+	<1 %	30-40 cm		
	<i>Stemodia grossa</i>	20	10-25%	30-40 cm	A128-4	
	<i>Tephrosia rosea</i> var. <i>clementii</i>	+	<1 %		A128-5	
	<i>Themeda</i> sp. Burrup (B84)	+	<1 %	45 cm	A128-2	
	<i>Triodia angusta</i> (Burrup Form)	40-50	33.3-50%	40 cm		

**Angel Island Site A129****Described by** VLL **Date** 31/05/00**Location** Dunes along surfers' beach, W side Angel Island.**Air Photo** **Photo** 21 **on Roll** F2 **Video** N **E Photo****Photo Notes****AMG Zone** 50 479550mE, 7735055mN**Habitat** Narrow crest and seaward side of foredune along surfers' beach.**Soil** White, fine-medium beach sand with shell fragments.**Rock Type** N/A**Vegetation** Scaevola crassifolia low shrubland over Spinifex longifolius, Whiteochloa airoides hummock/tussock grassland**Veg Condition** Excellent - no weeds. Beach side, no kapok.**Fire Age** N/A**Notes** Long, relatively low (1.5 m) foredune, paralleling beach. Relatively dense Spinifex longifolia. Runs E-W, therefore less exposed to easterlies and westerlies. Relatively wide beach 30-40 m gives some tidal surge protection perhaps.**Rock Pile Notes****Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

**Angel Island Site A140**

**Described by** MET **Date** 31/05/00

**Location** Angel Island, southern part.

**Air Photo** **Photo** 10 **on Roll** MB **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 478586mE, 7733408mN 478602mE, 7733451mN

**Habitat** Steeply sloping E facing rockpile slope.

**Soil** Gravelly (angular) pebbly light brown loamy fine sand.

**Rock Type** Dark grey fine to medium grained volcanic?igneous.

**Vegetation** Ficus opposita var. indecora, Flueggea virosa ssp. melanthesoides scattered tall shrubs over Rhagodia eremaea, Cajanus cinereus scattered shrubs over Triodia angusta (Burrup form) scattered hummock grasses.

**Veg Condition** Excellent

**Fire Age** >10 yrs

**Notes** Included vegetation at end of length (next to Peg 2). It's nor much vegetation cover on rockpile.

**Rock Pile Notes** Some outcrop, mostly medium to large boulders, angular, some small narrow slopes with more cobbles.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Abutilon lepidum	+	<1 %	1 m	A140-4	sticky. At upper edge

## Burrup Peninsula quadrats

### Burrup Peninsula Site B001

**Described by** VLL      **Date** 20/05/00      50 x 50m

**Location** 350m SE of Hearson Cove Road, on upper slope to crest of hill.

**Air Photo**      **Photo** 25      **on Roll** M1      **Video** N      **E Photo**

#### Photo Notes

**AMG Zone** 50 476850mE, 7717849mN 476802mE, 7717796mN

**Habitat** NW facing gentle rocky hill slope with very small rockpile. Upper slope to crest. Scattered rocks on surface.

**Soil** Skeletal red silty soil with small-medium rocks and boulders on slope (30-60cm)

#### Rock Type

**Vegetation** Tephrosia aff supina (MET 12,357) low open annual shrubland over Triodia epactia (Burrup form), Themeda sp. Burrup (B84), Cymbopogon ambiguus closed hummock/tussock grassland with Rhynchosia cf. minima very open lianes.

**Veg Condition** Very Good, but drying out

**Fire Age** N/A

**Notes** .

### Burrup Peninsula Site B002

**Described by** ASW      **Date** 20/05/00  
**Location** Slope of rockpile immediately SE of track running along base. Access from Woodside lay-down area on SE side of Hearson Cove road.  
**Air Photo**                      **Photo** 16A,17A    **on Roll** AS    **Video** N E **Photo**  
**Photo Notes**  
**AMG Zone** 50 477084mE, 7717940mN  
**Habitat** Rockpile, steep slope  
**Soil**  
**Rock Type**  
**Vegetation** Ehretia saligna var. saligna, Brachychiton acuminatus scattered low trees to low open woodland over Flueggea virosa subsp. melanthesoides scattered tall shrubs over Dichrostachys spicata, Acacia coriacea subsp. coriacea, Rhagodia eremaea, Alectryon oleifolius, Commicarpus australis scattered shrubs to open shrubland over Enchylaena tomentosa, \*Aerva javanica, Capparis spinosa var. nummularia scattered low shrubs over \*Cenchrus ciliaris, Triodia epactia (Burrup form) very open tussock/hummock grassland with Rhynchosia cf. minima very open lianes.  
**Veg Condition** Good-Very Good-Excellent  
**Fire Age** >10 years  
**Notes** Rockpile vegetation with grassland elements. Peg 1 - Peg 2 is a straight line, but the boundary of the plot follows the edge of the grassland to the top of the slope. This site was recorded as two plots or more, but entered as one for data aggregation.

**Rock Pile Notes** Boulders mainly 20 cm to >100 cm dia.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

## Burrup Peninsula Site B004

**Described by** VLL      **Date** 20/05/00      5m x100m

**Location** Approx. 300 m S of Hearson Cove Road. Shallow, narrow drainage gully flowing N - S.

**Air Photo**      **Photo** 26      **on Roll** M1      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 476776mE, 7717726mN 476750mE, 7717829mN

**Habitat** Shallow, narrow drainage gully S->N on N side of rockpile ridge, draining down towards saline flats (Hearson Cove Rd.).

**Soil** Skeletal

**Rock Type** Small rocks and large pebbles, red and grey.

**Vegetation** Ehretia saligna var. saligna, Corymbia hamersleyana scattered tall shrubs to low trees over Grevillea pyramidalis subsp. pyramidalis, Acacia coriacea subsp. coriacea scattered shrubs over Corchorus walcottii low shrubland to low open heath over Triodia epactia (Burrup form), Themeda sp. Burrup (B84) hummock/tussock grassland to closed hummock/tussock grassland.

**Veg Condition** VG - Drainage line, therefore naturally disturbed.

**Fire Age** N/A

**Notes** Narrow drainage gully, no more than 5 m wide. Transect along x 100 m, staying within the actual gully.

## Burrup Peninsula Site B006

**Described by** ASW      **Date** 20/05/00

**Location** Colluvial/alluvial flat near parking area at end of track to petroglyph site from Hearson Cove road.

**Air Photo**      **Photo** 18A      **on Roll** AS      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 477925mE, 7718120mN 477915mE, 7718190mN

**Habitat** Flat to gentle slope in valley. Alluvial (probably) with high proportion of soil.

**Soil** Red-brown loamy clay.

**Rock Type** Gravel <10-20 cm.

**Vegetation** *Acacia bivenosa* scattered tall shrubs over *Dichrostachys spicata* scattered shrubs over *Indigofera trita*, *Indigofera linnaei* low shrubland over *Triodia angusta* (Burrup form), *Triodia epactia* (Burrup form), *Chrysopogon fallax* closed hummock/tussock grassland with *Stemodia grossa* open herbland.

**Veg Condition** Good-Very Good - some dead taller shrubs and a presence of \**Aerva javanica* and \**Cenchrus ciliaris*.

## Burrup Peninsula Site B007

**Described by** MET **Date** 20/05/00

**Location** S of King Bay - Hearson Cove track.

**Air Photo** **Photo** 24, **on Roll** MB **Video** N **E Photo**

**Photo Notes** 24, 25 from Roll MB1 - looking up and down creek from same place.

**AMG Zone** 50 477775mE, 7717788mN 477833mE, 7717689mN

**Habitat** Small flow line/creek between low rockpile ridges. Has a gentle slope.

**Soil** Silty coarse sand, brown, amongst cobbles and boulders.

**Rock Type** Boulders and volcanic rocks, fine to medium grained, grey.

**Vegetation** *Eucalyptus victrix* scattered low trees over *Acacia coriacea* subsp. *coriacea*, *Acacia bivenosa* scattered tall shrubs over *Flueggia virosa* subsp. *melanthesoides* scattered shrubs over *Triodia angusta* (Burrup form), *Cyperus vaginatus* open hummock grassland/sedgeland with *Sesbania cannabina* tall annual open herbland and *Dicliptera armata* very open low herbland.

**Veg Condition** Very Good to Excellent.

**Fire Age** >10 Years

**Notes** Has small, shallow pools of water in the lowest parts, water flowing very slowly. Small Gastropod feeding on algae on rocks in pools. Where there are more sandy banks there is more *Triodia angusta* (Burrup form). Parts of the bed are mostly boulders with some other parts (near Peg 2)

fairly flat outcrop. Where the creek becomes rockier, the vegetation becomes two strips along the sides; these are very narrow.

### Burrup Peninsula Site B008

**Described by** VLL      **Date** 20/05/00      150x5-7m

**Location** Drainage gully 50 m S of Hearson Village road.

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

#### Photo Notes

**AMG Zone** 50 477528mE, 7719682mN

**Habitat** Shallow drainage gully 1.5 m wide draining from high rock hills to N into saline flats S. Runs through an undulating Hummock/*Grevillea pyramidalis* plain. Water has dried up but was lying for some time, evidenced by light-whitish grey algal mat on rocks.

**Soil** Brown-grey medium-coarse alluvial with stones to boulders 5 - 20 cm diameter.

**Rock Type** Fine-grained grey and yellowish rocks.

**Vegetation** *Terminalia canescens*, (*Eucalyptus victrix*) low woodland over *Triodia epactia* (Burrup form), *Eriachne tenuiculmis*, *Cyperus vaginatus*, *Cyperus bifax* hummock/tussock grassland/sedgeland with *Dicliptera armata*, *Stemodia grossa* low annual open herbland to low herbland.

**Veg Condition** Very good to excellent.

**Fire Age** N/A

**Notes** Drain begins open - rocks and pebbles with algal mat but by 50 m pebbles become smaller, 5-10 cm, and more alluvial soil -> dense grass cover.

**Rock Pile Notes**

**Burrup Peninsula Site B009**

**Described by** ASW **Date** 20/05/00

**Location** Gentle slope or flat S of flow line, parallel to and on N side of bitumen road to Hearson village, W of road uphill to tanks.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

**Photo Notes** 19A, 20A of Roll ASW 1

**AMG Zone** 50 477524mE, 7719755mN 477454mE, 7719794mN

**Habitat** Colluvial surface, gently rounded and isolated by Hearson road on SE side and flow line on NE, NW sides.

**Soil** Red-brown loamy clay and rocks.

**Rock Type** Rounded, to 200 m diameter.

**Vegetation** Acacia orthocarpa open shrubland over *Indigofera linnaei*, *Indigofera linifolia* low open shrubland over *Triodia wiseana* (Burrup form), \**Cenchrus ciliaris* hummock/tussock grassland.

**Veg Condition** Very good-good, has \**Cenchrus ciliaris*.

**Fire Age**

**Notes** The *Acacia orthocarpa* shrubs have been heavily browsed, down almost to ground level. The community, especially *Triodia wiseana* (Burrup form), is only S of the flow line and SW to where it is replaced by *Triodia epactia* (Burrup form), which is also N of the flowline.

## Burrup Peninsula Site B010

**Described by** MET **Date** 20/05/00

**Location** N side of King Bay - Hearson Cove road.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 477442mE, 7719921mN 477396mE, 7719909mN

**Habitat** Rockpile-scrub slope.

**Soil** Under shrub patches on slope is >5 cm of litter in cracks between rocks. Loose or compact brown loam in places.

**Rock Type** Volcanic, grey, medium grained.

**Vegetation** Clerodendrum tomentosum, Brachychiton acuminatus, Ehretia saligna var. saligna scattered low trees over Flueggea virosa subsp. melanthesoides, Acacia coriacea subsp. coriacea tall open shrubland over Dichrostachys spicata, Pittosporum phylliraeoides var. phylliraeoides, Rhagodia eremaea, Scaevola spinescens (narrow form) scattered shrubs over \*Aerva javanica, Abutilon fraseri low open shrubland over \*Cenchrus ciliaris, Cymbopogon ambiguus, Triodia epactia (Burrup Form) very open tussock/hummock grassland.

**Veg Condition** Very good - Excellent.

**Fire Age** >10 years.

**Notes** Some patches of \*Cenchrus ciliaris. Rockpockets <= 10% of the plot. Within them they have cover >60 %.

**Rock Pile Notes** Is on a corner, part faces almost S and part WSW. Slopes quite steeply. Has some outcrop. Near lower edge, cobbles and small boulders, further up has small to large boulders. Only ca 1-2% soil cover.

## Burrup Peninsula Site B011

**Described by** VLL **Date** 21/05/00 **100x30m**

**Location** 30 m S of Hearson, low broad gully after very high rockpiles to W (Plenty River site).

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 477276mE, 7719685mN 477315mE, 7719574mN

**Habitat** Shallow valley with low drainage areas and fine drainlines (ie no more than 1 m wide, shallow) between very high rockpile hill to W + N, and slightly higher undulating hills to E. Slopes gently to saline flats to S.

**Soil** Alluvial brown-grey in narrow drainlines and low areas, skeletal red on higher surfaces.

### Rock Type

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis* open heath over *Corchorus walcottii* low shrubland over *Triodia epactia* (Burrup form), *Chrysopogon fallax* hummock/tussock grassland.

**Veg Condition** Excellent.

**Fire Age** 10-15 years.

**Notes** This is an atypical, relatively dense, *Grevillea pyramidalis* subsp. *pyramidalis* heathland. Although this is a common species on the Burrup, populations are generally more scattered; rarely more than 2-10%. The density of this population may be due to what appears to be a fire history of ~10-15 years.

### Burrup Peninsula Site B013

**Described by** VLL      **Date** 21/05/00      10x100m

**Location** ~200 m E of Burrup Road.

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

#### Photo Notes

**AMG Zone** 50 474678mE, 7716652mN 474620mE, 7716678mN

**Habitat** Shallow flowline at base of lower slopes, flowing NE-SW; no 'scaloped' drain, just shallow flowline mainly supporting herbland and shrubs on *Triodia epactia* grassland slopes.

**Soil** Reddish to brown silty soil with small rocks and pebbles 15-25 cm diameter.

**Rock Type** Fine-grained red-brown rock.

**Vegetation** *Dichrostachys spicata* open shrubland over *Tephrosia* aff *supina* (MET 12,357), *Indigofera monophylla* (Burrup form), *Triumfetta appendiculata* (Burrup form) low open heath over *Triodia epactia* (Burrup form) hummock grassland.

**Veg Condition** Excellent.

#### Fire Age

**Notes** Relatively dense *Tephrosia* aff *supina* (MET 12,357), *Triumfetta appendiculata* (Burrup form), *Indigofera monophylla* (Burrup form) community with mid-level *Dichrostachys spicata*, *Tephrosia* sp.B Kimberley Flora(C.A.Gardner 7300) , beneath *Triodia* slopes draining down into broad basin. All three species (*Tephrosia* aff *supina* (MET 12,357), *Triumfetta appendiculata* (Burrup form), *Indigofera monophylla* (Burrup form)) are colonisers of semi-moist, naturally disturbed sites.

## Burrup Peninsula Site B014

**Described by** MET **Date** 22/05/00

**Location** Pistol ranges adjacent to Burrup Road.

**Air Photo** **Photo** 18 **on Roll** **MB** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 474725mE, 7716684mN 474684mE, 7716656mN

**Habitat** Rock (boulder) pile in mid-slope.

**Soil** Brown loam (a bit greyish) between cobbles and boulders.

**Rock Type** Volcanic, grey medium grained.

**Vegetation** Dichrostachys spicata, Flueggia virosa subsp. melanthesoides, Ehretia saligna var. saligna, Acacia coriacea subsp. coriacea scattered tall shrubs over Rhagodia eremaea, Scaevola spinescens (narrow form) scattered shrubs over very open \*Cenchrus ciliaris, Triodia epactia (Burrup form) tussock/hummock grassland and Rhynchosia cf. minima low open vines.

**Veg Condition** Very good to excellent. Presence of the \*Cenchrus ciliaris reduces the condition slightly from excellent.

### Fire Age

**Notes** Only has plants around the margins. Recorded out to where the boulders are separated by cracks not soil, and under 'rockpile' shrubs. Only one species (Phyllanthus maderaspatensis) was recorded on the E side and not the W side of the site. Between the rockpile (B14) and ASWs B13 (downslope) there is an area of stabilised cobble/boulder scree with soil between the cobbles.

This has scattered *Dichrostachys spicata*, *Ipomoea costata*, *Tephrosia* sp. and *Grevillea pyramidalis* subsp. *pyramidalis* over *Triodia epactia* (Burrup form) open hummock grassland and scattered *Rhynchosia* cf. *minima*. A similar area 60-70 m S has more (>5%) of the *Tephrosia*. The population of the *Corchorus walcottii* in the immediate area of B13 and B14 has >100 plants. It is quite common in the flowline S of B13.

**Rock Pile Notes** Tongue of cobbles to boulders (very mixed size range) down a SSW facing slope, soil cover only at edges.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Acacia bivenosa</i>	+	<1 %	1.4 m

### Burrup Peninsula Site B016

**Described by** ASW      **Date** 21/05/00

**Location** E of B12, on plateau on top of rockpile slope.

**Air Photo**                      **Photo** 23A      **on Roll** AS      **Video** N      **E Photo**

#### Photo Notes

**AMG Zone** 50 474913mE, 7716704mN 474855mE, 7716719mN

**Habitat** Gentle slope on top of rockpile.

**Soil** Very sparse between boulders.

**Rock Type** Boulders to 50 cm diameter.

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis*, *Ipomoea costata* scattered shrubs to open shrubland over *Triodia epactia* (Burrup form) hummock grassland with *Tephrosia* aff *supina* (MET 12,357) open herbland and *Rhynchosia* sp. Burrup (82-1C) open lianes.

**Veg Condition** Very Good (Good-poor for weeds)

**Fire Age** >10 years

## Burrup Peninsula Site B017

**Described by** MET      **Date** 21/05/00

**Location** Pistol Ranges ca. 300m E of Burrup Road

**Air Photo**      **Photo** 17      **on Roll** M1      **Video** N      **E Photo**

**Photo Notes** No. 16 of Roll M1 is of a *Dichrostachys spicata* stand (dense) ups

**AMG Zone** 50 474972mE, 7716676mN 474890mE, 7716620mN

**Habitat** Narrow flowline in the base of a broad gully that has rockpile walls.

**Soil** Brown claypan.

**Rock Type**

**Vegetation** *Eucalyptus victrix* low open woodland over *Dichrostachys spicata*, *Acacia coriacea* subsp. *coriacea* scattered shrubs over *Triodia angusta* (Burrup form), *Themeda* sp. Burrup (B84), *Cyperus vaginatus* hummock/tussock grassland/sedgeland with *Rhynchosia* sp. Burrup (82-1C) very open lianes.

**Veg Condition** Good - very good. *Cenchrus* reduces condition.

**Fire Age** >10 yrs

**Notes** East peg is next to a large boulder. The bottom (<1 m wide mostly) of the flowline was still very moist. Had had water long enough for *Chara* to grow (small amount) and little brown frogs! A narrow strip recorded (2-5 m), that is damp and has species (eg *Cyperus vaginatus*) indicating moister conditions (seasonally). The adjoining slopes have mostly *Triodia epactia* (Burrup form) but there are some wide patches of *Triodia angusta* (Burrup form) dense hummock grassland with a few shrubs, The \**Cenchrus ciliaris* was heavily grazed, *Themeda* sp. Burrup (B84) less so. Drier part (eastern 20 m) has no *C. vaginatus*, more (>15%) *Themeda* sp. Burrup (B84) here. Also, *Triumfetta appendiculata* (Burrup form) and *Tephrosia* aff. *supina* (MET 12357). *Tephrosia* aff. *densa* (B17) was next to this site.

**Rock Pile Notes**

### Burrup Peninsula Site B018

**Described by** MET      **Date** 21/05/00

**Location** Adjacent to B17.

**Air Photo**      **Photo** 15      **on Roll** MB      **Video** N      **E Photo**

#### Photo Notes

**AMG Zone** 50 474944mE, 7716671mN 474906mE, 7716644mN

**Habitat** Steep S facing boulder scree (rockpile) with some outcrop.

**Soil** Bright light brown (orange brown) loam.

**Rock Type** Volcanic, grey, medium grained.

**Vegetation** *Brachychiton acuminatus* scattered low trees over *Flueggia virosa* subsp. *melanthesoides* scattered tall shrubs to tall open shrubland over *Dichrostachys spicata* scattered shrubs to open shrubland over *Cymbopogon ambiguus*, *Themeda* sp. Burrup (B84), *Eriachne mucronata* (typical form), \**Cenchrus ciliaris* scattered tussock grasses to open tussock grassland.

**Veg Condition** Very good to excellent.

**Fire Age** >10 yrs.

**Notes** East end at a *Dichrostachys spicata*, which is +/- opposite a small two-stemmed *Eucalyptus victrix*.

**Rock Pile Notes** Rocks vary from cobbles to boulders, but mostly boulders. Some outcrop.

## Burrup Peninsula Site B019

**Described by** VLL      **Date** 21/05/00      70x70x60m

**Location** E of Burrup Road approx N from B-20 Peg 1, on lower slopes of B20-21 gully.

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

### Photo Notes

**AMG Zone** 50 475187mE, 7717136mN 475175mE, 7717204mN

**Habitat** Low 'basin' area surrounded by medium-sized hillslopes and ridges to the S, E and N sides. Drainage line with *Terminalia canescens*/*Dichrostachys spicata* flows along the S border.

### Soil

### Rock Type

**Vegetation** *Corymbia hamersleyana* low open woodland to low woodland over *Ehretia saligna* var. *saligna*, *Dichrostachys spicata* scattered tall shrubs over *Triumfetta appendiculata* (Burrup form) scattered low shrubs over *Triodia angusta* (Burrup form) hummock grassland.

**Veg Condition** Excellent.

### Fire Age

**Notes** Sample area is triangle shaped, dictated by hillslopes and drainage lines as boundaries (ie not part of this habitat).

**Rock Pile Notes**

## Burrup Peninsula Site B020

**Described by** VLL      **Date** 21/05/00      20x100m

**Location** 400 m E of Burrup Road (opposite massacre site)

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

### Photo Notes

**AMG Zone** 50 475184mE, 7717030mN 475182mE, 7716935mN

**Habitat** Moderately deep rock gully and distinct rock gully corridor beneath two high rockpile ridges running (??), rocky Triodia banks - mid-level rock slopes.

**Soil** Skeletal to moderate brown-grey alluvial soil with rocks and boulders 20-40 cm dia.

**Rock Type** Fine grained red-grey rhyodocite

**Vegetation** Terminalia canescens low open forest over Triodia epactia (Burrup form), Triodia angusta (Burrup form), (Eriachne tenuiculmis) open hummock/tussock grassland with Sesbania cannabina annual tall herbland.

**Veg Condition** Excellent.

**Fire Age** N/A

**Notes** Transect is 20 m wide, 100 m long. It accomodates ca. 5 m of Triodia bank on each side (varies, sometimes rockpile meets drain gully) amd ca. 10 m rocky drain. These differences are noted below.

### Rock Pile Notes

Typha domingensis	+	<1 %	1.5 m	B20-26	?? Drain only, big Rush

## Burrup Peninsula Site B021

**Described by** VLL      **Date** 21/05/00      2x80 m

### Location

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

### Photo Notes

**AMG Zone** 50 475182mE, 7716930mN 475186mE, 7716880mN

**Habitat** Very narrow rocky gully in upper rockpiles, high up in Pistol Ranges. Gully is very narrow - 3 m with rocky walls (no banks) - continues on from B020 where the habitat changes to this narrow gully.

**Soil** Skeletal brown grey, large rocks to 80-90 cm and outcropping rock.

### Rock Type

**Vegetation** Terminalia canescens, Brachychiton acuminatus, Flueggea virosa subsp. melanthesoides low woodland over Dichrostachys spicata open shrubland over \*Cenchrus ciliaris, Cymbopogon ambiguus, Eriachne tenuiculmis, Triodia epactia (Burrup form), Themeda sp. Burrup (B84) open tussock/hummock grassland with Dicliptera armata, Stemodia grossa annual herbland.

**Veg Condition** Excellent.

**Fire Age** N/A

**Notes** Less evidence of water lying here.

### Rock Pile Notes

**Burrup Peninsula Site B025**

**Described by** VLL **Date** 22/05/00 **45 x 55 m**

**Location** High plateau above rockpiles immediately E of CALM Gate (past Withnell Bay).

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

**Photo Notes**

**AMG Zone** 50 478790mE, 7724243mN

**Habitat** Stony hummock-grassed terrace, W facing, approximately 55-60 m wide by 150 m long between rock ridges to E and W. Area surveyed does not include rockpiles at sides at all.

**Soil** Skeletal red-brown silty, low rockwall to E and deeper colluvial sandy soil and shale to rock drop at W side.

**Rock Type** Rocks and boulders, fine grained rhyodacite.

**Vegetation** *Acacia bivenosa*, *Grevillea pyramidalis* subsp. *pyramidalis* high open shrubland over *Indigofera monophylla* (Burrup form) low open shrubland over *Triodia epactia* (Burrup form) hummock grassland.

**Veg Condition** Excellent

**Fire Age**

**Notes** There are small outcropping rockpiles (1-1.5 m diameter) in general vicinity and survey. There are possibly two different assemblages on this plateau within the survey area; 1) *Triodia epactia* (Burrup form) grassland on red skeletal soil with rocks and boulders and 2)? a strip of *Triodia angusta* (Burrup form) on deeper, more weathered soil and shale-like rock. *T. angusta* (Burrup form) is very dense and allows for few other species. *T. angusta* (Burrup form) strip is ca. 5 m wide and is not continuous, but is quite obvious.

**Rock Pile Notes**

## Burrup Peninsula Site B026

**Described by** VLL **Date** 22/05/00

**Location** Rockpile immediately W of Site 25 approx. 250m up-slope from the CALM gate (N of Withnell Bay]

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 478870mE, 7724247mN

**Habitat** Rockpile - high rockpile above high plateau. Slope faces W, ridge runs N-S

**Soil** Rock.

**Rock Type** Large - medium jointed rhyodocite - red brown, fine grained.

**Vegetation** Ficus platypoda var. G, Brachychiton acuminatus low open woodland over Terminalia supranitifolia, Ipomoea costata scattered shrubs over Indigofera monophylla (Burrup form) scattered low shrubs over Triodia epactia (Burrup form), Cymbopogon ambiguus very open hummock/tussock grassland.

**Veg Condition** Excellent

**Fire Age** N/A

**Notes** W facing, very exposed to W winds. No rockpile in front to break winds.  
In species list, T= top, B= base, T+B= top and base.  
Individual thickets the woodland may be as dense as 30-70%.

**Rock Pile Notes** Medium to large jointed rhyadocite, some large vertical rock with intermediate boulders.  
Rockpile is not high, ca. 10 m.

## Burrup Peninsula Site B030

**Described by** MET **Date** 25/05/00

**Location** Mt. Burrup general area

**Air Photo** **Photo** 11 **on Roll** MB **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 482583mE, 7728091mN 482529mE, 7728065mN 482574mE, 7728053mN

**Habitat** Hillslope facing approx. N, rounded moderate slope.

**Soil** Gravelly, pebbly red brown (fine) sandy loam amongst cobbles and some boulders.

**Rock Type** Light grey? Igneous/volcanic (weathers pale pinkish-whitish).

**Vegetation** Acacia inaequilatera scattered tall shrubs over Acacia bivenosa, Acacia colei scattered shrubs over Indigofera monophylla (Burrup form) low open shrubland over Themeda sp. Burrup (B84), Triodia epactia (Burrup form) tussock/hummock grassland with Rhynchosia cf. minima low lianes.

**Veg Condition** Excellent

**Fire Age** >5, ?>10 years

**Notes** Similar vegetation on opposite slope.

A Corymbia hamersleyana just outside plot.

SE Peg 5 m short of 50 m to avoid rockpile @ 50K-04-82-574, UTM-77-28-053.

Ca. 50 m to E spur has Triodia wiseana (Burrup form) (also in the creek between spurs). The creek to the N of the site has Eucalyptus victrix and scattered shrubs over Triodia angusta (Burrup form).

Chrysopogon trichodesmoides was 300 m NE of the plot (AMG 50K 04-82-875, UTM 77-28-049)(Shrub to 70 cm in small open gully over Themeda sp. Burrup (B84) and Triodia wiseana (Burrup form)).

### Burrup Peninsula Site B031

**Described by** MET **Date** 25/05/00

**Location** North of Mt. Burrup.

**Air Photo** **Photo** 10 **on Roll** MB **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 483097mE, 7727818mN 483063mE, 7727840mN

**Habitat** Rockpile/ large outcrop. Has very steep slopes. In effect is a small hill (knoll?).

#### Soil

**Rock Type** Granite (or close - feldspar, quartz and a small amount of a dark mineral).

**Vegetation** *Brachychiton acuminatus* scattered low trees over *Ehretia saligna* var. *saligna*, *Flueggia virosa* subsp. *melanthesoides* scattered tall shrubs over *Abutilon* aff. *dioicum* (HD72-14) scattered shrubs to open shrubland over *Themeda* sp. Burrup (B84), *Cymbopogon ambiguus* scattered to very open tussock grassland with *Dicliptera armata* open annual herbland

**Veg Condition** Excellent.

**Fire Age** >5 yrs? >10 yrs.

**Notes** Recorded to crest and around corner to patch with *Brachychiton acuminatus*. Most of the vegetation occurs as small patches with cover >10%.

**Rock Pile Notes** <10% soil cover, has *Triodia angusta* on such areas. Has mostly boulders (>50 cm -> 2+ m) and some outcrop. Boulders angular, some small areas with cobbles falling between boulders, near base of slopes.

#### Species List:

### Photo Notes

**AMG Zone** 50 479966mE, 7724106mN 479984mE, 7724036mN

**Habitat** Flat to gently sloping field of boulders (mainly small) and smaller stones, with a few small outcrops on top of the mountain and bordering the rockpile slope to the E.

**Soil** Sparse, red-brown clayey.

**Rock Type** Boulder field 'granophyre'.

**Vegetation** Acacia colei scattered shrubs over Acacia orthocarpa, Goodenia stubbsiana low open shrubland over Triodia epactia (Burrup form), Themeda sp. Burrup (B84) closed hummock/tussock grassland.

**Veg Condition** Good - Very Good.

**Fire Age** <5 yrs?

## Burrup Peninsula Site B033

**Described by** VLL      **Date** 22/05/00      50x50m

**Location** Approximately 0.8-1 km W of Mt. Wongama station and 600 m E of CALM track, high exposed plateau W of deep broad gully 36.

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

### Photo Notes

**AMG Zone** 50 479009mE, 7724271mN 478977mE, 7724221mN

**Habitat** Broad open exposed plateau, stony [3-20 cm diam]. No rockpiles, no large stones or boulders, no outcrops.

**Soil** Skeletal red-brown.

**Rock Type** Small stones 3-10 cm and some to 20 cm diameter.

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis*, *Acacia colei* scattered shrubs over *Triodia epactia* (Burrup form) hummock grassland.

**Veg Condition** Excellent.

**Fire Age** N/A

**Notes** Good example of high exposed stony plateau with no "noise".

**Burrup Peninsula Site B036**

**Described by** VLL                      **Date** 22/05/00                      1x50m

**Location** First gully to W of Mt. Wongama approx. 350-400 m down from Mt. Wongama Station.

**Air Photo**                      **Photo**                      **on Roll**                      **Video**    **N**    **E Photo**

**Photo Notes**

**AMG Zone** 50 479201mE, 7724255mN

**Habitat** Very narrow gully, stony floor 1 m wide, stony banks approx. 2 m before steep rocky slopes. Rocks in gully are rounded/smooth, rocks on hills on each side are weathered variably. Gully flows N-S.

**Soil** Very little soil, dark alluvial brown beneath stones/mostly rocky. Litter covered (dead rhymin, cyp-eri) cyp, stemodia.

**Rock Type** Very fine grained rhyadocite, well weathered.

**Vegetation** Eucalyptus victrix, Brachychiton acuminatus low woodland over Cyperus vaginatus, Cyperus

bifax sedgeland with *Dicliptera armata* annual herbland and *Rhynchosia* sp. Burrup (82-1C), (*Rhynchosia* cf. *minima*) open annual lianes.

**Veg Condition** Excellent.

**Fire Age** N/A

**Notes** Gully begins with stony floor but at approx. 25 m pools of water have more soil and support *Cyperus*, *Stemodia*, *Rhynchosia* cover under *Eucalyptus victrix*. At 50 m rock hillslope banks widen out and habitat changes to *Triodia angusta* (Burrup form), *Rhynchosia*. Transect was stopped at this point. Most of the gully is either stony or completely overgrown, little space for smaller *Cyperaceae* [*Fimbristylis* sp. etc.] and other herbs.

### Burrup Peninsula Site B040

**Described by** VLL      **Date** 25/05/00      3.5x100 m

**Location** CALM track- toward north end- terminal point.

**Air Photo**      **Photo** 2      **on Roll** F1      **Video** N      **E Photo**

#### Photo Notes

**AMG Zone** 50 482096mE, 7728043mN 482022mE, 7727978mN

**Habitat** Drainage gully along valley surrounded by rocky mountain slopes. The gully is narrow (2-3 m only, broadens to 5 m in places), stony, well worn stones and boulders (5-25 cm in diam.)

**Soil** Colluvial red-grey soil, skeletal beneath stones.

**Rock Type** Well worn grey-redbrown, fine grained.

**Vegetation** Eucalyptus victrix low woodland over Triodia angusta (Burrup form), Triodia epactia (Burrup form), Cyperus vaginatus, Cyperus bifax hummock grassland/sedgeland with Sesbania cannabina tall annual herbland and Stenotaphrum secundatum annual open low herbland.

**Veg Condition** Excellent, no weeds.

**Fire Age** N/A

**Notes** The entire site was within a narrow gully, one small section of approx. 10 m had rocky walls [rockpile on each side]. All the gully sampled had some water.

### Burrup Peninsula Site B041

**Described by** VLL      **Date** 25/05/00      see sheet

**Location** Approximately 70 m SE side of CALM track up centre of Peninsula, approx 50 m SE of Site B40.

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E Photo**

#### Photo Notes

**AMG Zone** 50 481876mE, 7727956mN 481834mE, 7727951mN 481872mE, 7728015mN 481897mE, 7728010mN

**Habitat** Gentle, north facing, rocky, *Triodia* covered slope. Slope is undulating - only crest of undulation is sampled.

**Soil** Skeletal red silt.

**Rock Type** Fine-grained red stones, boulders and rocks 20-80 cm.

**Vegetation** *Indigofera monophylla* (Burrup form) low shrubland over *Triodia epactia* (Burrup form) hummock grassland.

**Veg Condition** Excellent. NO weeds.

**Fire Age** N/A

**Notes** Slope is undulating and the quadrat has been placed so that the upper part of the slope is sampled, not the swale.

#### Rock Pile Notes

## Burrup Peninsula Site B042

**Described by** VLL      **Date** 25/05/00      100x2-5m

**Location** Approximately 150 m above CALM track and B40.

**Air Photo**      **Photo**      **on Roll**      **Video**      **N**      **E**      **Photo**

### Photo Notes

**AMG Zone** 50 482068mE, 7727974mN 482095mE, 7727876mN

**Habitat** Steep rockslope gully between large, large-jointed rhyadocite rockpiles

**Soil** Skeletal.

**Rock Type** Large jointed fine-grain rhyadocite.

**Vegetation** *Eucalyptus victrix*, (*Brachychiton acuminatus*, *Terminalia canescens*) low open forest over *Cyperus vaginatus* very open sedgeland with *Sesbania cannabina* annual open tall herbland and *Dicliptera armata* low annual open herbland with *Rhynchosia* sp. Burrup (82-1C) open annual lianes.

**Veg Condition** Excellent [disturbed naturally] long waterfall down face of rocks, but NO weeds.

### Fire Age

**Notes** Understorey overgrown with *Rhynchosia* sp. Burrup (82-1C) and *Dicliptera armata*. Stayed within gully - water trickling down rocks and small pools all the way to the transect. *Sesbania cannabina* formed shrubland in pools.

**Rock Pile Notes** Rocks vertical and upright at top of rockpile, then weathering to large rocks between.

### Burrup Peninsula Site B044

Described by VLL Date 25/05/00

Location N of Conzinc. 150 m up rockpile.

Air Photo Photo on Roll Video N E Photo

#### Photo Notes

AMG Zone 50 482095mE, 7727876mN

Habitat Steep sloped rockpile, large-medium sized rhyadocite - large-med jointed rocks.

Soil Rock, no soil.

Rock Type Large-medium jointed red-brown fine grain rhyadocite.

Vegetation Terminalia canescens, Brachychiton acuminatus scattered low trees over Acacia coriacea subsp. coriacea scattered shrubs over Triodia epactia (Burrup form) scattered hummock grass.

Veg Condition Excellent.

Fire Age N/A

## Burrup Peninsula Site B046

Described by ASW Date 25/05/00

Location ESE of Mt. Burrup on top of SE facing slope - rockpile.

Air Photo Photo on Roll Video N E Photo

### Photo Notes

AMG Zone 50 482795mE, 7727307mN 482789mE, 7727239mN

Habitat Steep upper-mid slope (facing SE). Rockpile pockets.

### Soil

Rock Type Pale coarse-grained (as B45) angular boulders, mainly over 20 cm diam (to >2M).

Vegetation Ficus platypoda var. D, Ficus virens var. sublanceolata, Brachychiton acuminatus scattered low trees over Flueggea virosa subsp. melanthesoides, Acacia coriacea subsp. coriacea scattered tall shrubs over Ipomoea costata, Rhagodia eremaea open shrubland over Themeda sp. Burrup (B84), Triodia angusta (Burrup form), Triodia epactia (Burrup form) tussock/hummock grassland with Rhynchosia sp. Burrup (82-1C) very open lianes.

Veg Condition Excellent.

### Fire Age

- Notes (1) single to few trees and large shrubs  
 (2) patches of grass, mainly Triodia angusta (Burrup form) and Themeda sp. Burrup (B84)  
 (3) Lower slope (approx. 50 m across x 15 m upslope) - mainly Themeda sp. Burrup (B84)

### Rock Pile Notes

### Burrup Peninsula Site B047

**Described by** ASW      **Date** 25/05/00      100x2->4m

**Location** Centre of flowline between hill, 119 degrees, and Mt. Burrup. Downstream from Peg 1 100m

**Air Photo**      **Photo** 0,1      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes**

**AMG Zone** 50 482602mE, 7727555mN 482659mE, 7727627mN

**Habitat** Shallow drainage line completely vegetated by Themeda sp. Burrup (B84) and a few shrubs and other plants.

**Soil** Not seen.

**Rock Type** Pebbles

**Vegetation** Corymbia hamersleyana low open woodland over Acacia inequilatera, Acacia pyrifolia (slender, white), Acacia coriacea subsp. coriacea, Acacia bivenosa, Acacia colei high open shrubland over Indigofera monophylla (Burrup form) low shrubland over Themeda sp. Burrup (B84), Triodia epactia (Burrup form) closed tussock/hummock grassland.

**Veg Condition** Very good to excellent.

**Fire Age** <1995

**Notes** The plot is 100 m long and varies from 2 m to >4 m, the width of the band of dense Themeda sp. Burrup (B84) and little upward slope.

#### Rock Pile Notes

## Burrup Peninsula Site B048

**Described by** ASW      **Date** 26/05/00

**Location** Approximately 3-400 m E of Burrup Hwy/Dampier-Karratha road junction on terrace above and near pale rockpile.

**Air Photo**      **Photo** 3      **on Roll** AS      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 472147mE, 7714001mN 472152mE, 7713928mN

**Habitat** Grassland terrace and boulder field, shallow gully on SW side. Sloping gently to the SW.

**Soil** Red-brown clayey loam.

**Rock Type** Mid-dark grey, fine grained, heavy rock rounded to subangular; predominantly 20-50 cm diameter. Dark red-brown surface

**Vegetation** *Ipomoea costata* open shrubland over *Tephrosia* aff. *supina* (MET 12,357), *Indigofera colutea*, *Triumfetta clementii* low shrubland over *Themeda* sp. Burrup (B84), *Triodia epactia* (Burrup form), \**Cenchrus ciliaris* tussock/hummock grassland over *Fimbristylis* aff. *dichotoma* (M75-4) very open sedgeland.

**Veg Condition** Very good - some \**Cenchrus ciliaris*.

**Fire Age** <1995?

**Notes** Slope is mainly *Themeda* sp. Burrup (B84), with areas of *Triodia epactia* (Burrup form) especially in the shallow gullies.

### Burrup Peninsula Site B049

**Described by** ASW      **Date** 26/05/00      50+100x40m

**Location** Approximately 300 m E of Burrup road beginning and W of B48. (see B48)

**Air Photo**      **Photo** 4,5      **on Roll** AS      **Video** N      **E Photo**

#### Photo Notes

**AMG Zone** 50 472090mE, 7714018mN 472093mE, 7713934mN

**Habitat** Rockpile with a few isolated trees and tussocks among the boulders.

**Soil** Dark organic. Covers <10% of rockpile and is not conspicuous

**Rock Type** As for B48 but more angular and subangular, surface is generally pale to medium red-brown instead of dark, and more fractured.

**Vegetation** *Brachychiton acuminatus* scattered low trees to low open woodland over \**Cenchrus ciliaris*, *Themeda* sp. *Burrup* (B84) open tussock grassland with *Rhynchosia* cf. *minima* very open lianes.

**Veg Condition** Poor-good, due to presence of *Cenchrus* and *Aerva*.

#### Fire Age

**Notes** Vegetation is mainly diffuse, not in clearly defined, densely vegetated pockets, with \**Cenchrus ciliaris* dominant. Line and length measurements are along the W base of the rockpile. The plot is only the rockpile of pale rocks - edges are outside.  
There is much more \**Cenchrus ciliaris* than away from the pale rocks or on the dark rockpile. See separate sheet of notes (???)

**Rock Pile Notes** Linear, low, narrow rockpile of rocks having a relatively pale surface, much paler than the other piles on either side of the line.

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen Notes
	<i>Acacia coriacea</i> subsp. <i>coriacea</i>	+	<1 %	2 m	
	<i>Aerva javanica</i>	1	1-5%	70 cm	
	<i>Brachychiton acuminatus</i>	5	5-10%	2.5 m	
	<i>Cenchrus ciliaris</i>	20	10-25%	60 cm	
	<i>Cynanchum floribundum</i>	+	<1 %	20 cm	
	<i>Dicliptera armata</i>	1	1-5%	40 cm	
	<i>Ipomoea costata</i>	+	<1 %	3.5 m	
	<i>Mukia maderaspatana</i>	1	1-5%	70 cm	
	<i>Rhagodia eremaea</i>	+	<1 %	1.5 m	
	<i>Rhynchosia</i> cf. <i>minima</i>	10	10-25%	60 cm

	<i>Trachymene</i> aff. <i>oleracea</i> (B61)	+	<1 %	30 cm	

*Trichodesma zeylanicum* var. *zeylanicum* + <1 % 20 cm

## Burrup Peninsula Site B050

**Described by** ASW **Date** 26/05/00

**Location** Largest visible rockpile face E from Burrup/Dampier-Karratha road junction.

**Air Photo** **Photo** 7-9 **on Roll** AS **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 472336mE, 7714016mN 472392mE, 7714029mN

**Habitat** Large rock pile

**Soil** Rich brown loam.

**Rock Type** Mainly subangular, dark red-brown on surface, grey, fine-grained, dense inside.

**Vegetation** *Brachychiton scuminata*, *Ficus platypoda* var. *D* scattered low trees over *Acacia coriacea* subsp. *coriacea*, *Ipomea costata* tall scattered shrubs over *Rhagodia eremaea*, *Scaevola spinescens* (narrow form) scattered low shrubs over \**Cenchrus ciliaris* very open tussock grassland with *Dicliptera armata* scattered to very open annual herbland and *Rhynchosia* cf. *minima* annual lianes.

**Veg Condition** Good (due to abundance of \**Cenchrus ciliaris*).

**Fire Age** ?

**Notes** Pockets of vegetation, mostly dense with small trees, large shrubs and grass or *Dicliptera armata*. Vegetation mostly in pockets of usually dense vegetation of small trees, large shrubs and grass or *Dicliptera armata*. There is *Terminalia supranitifolia* on other rockpile pockets nearby. Figures in brackets in species list are % of vegetation. *Acacia orthocarpa* was near this site.

**Burrup Peninsula Site B053****Described by** MET **Date** 26/05/00**Location** E of Rifle Range, in valley.**Air Photo** **Photo** 6 **on Roll** M1 **Video** N **E Photo****Photo Notes****AMG Zone** 50 474531mE, 7714426mN 474594mE, 7714390mN 474578mE, 7714437mN 474547mE, 7714381mN

- Habitat** Gentle slope in floor of valley between ridges, appears to be a low rise of colluvium.
- Soil** Gravelly, pebbly fine sand with some silty/clayey material between cobbles.
- Rock Type** About 40% surface cover of pebbles to small cobbles. Cobbles are volcanic rock.
- Vegetation** *Acacia inaequilatera*, *Hakea chordophylla*, *Grevillea pyramidalis* subsp. *pyramidalis* open shrubland to scattered shrubs over *Corchorus walcottii* scattered low shrubs over *Triodia epactia* (Burrup form), \**Cenchrus ciliaris*, *Fimbristylis* aff. *dichotoma* (M75-4) closed hummock/tussock grassland and low open sedgeland with *Rhynchosia* cf. *minima* open lianes.
- Veg Condition** Very good - excellent
- Fire Age** >5-10 yrs.
- Notes** *Grevillea pyramidalis* subsp. *pyramidalis* quite low, suggesting fire not greater than 5 years ago.  
\*\*B53-26 *Abutilon* erect shrub with one main stem and long spreading branches. Leaves mid-green, not sticky. Stem light green, not sticky.

## Burrup Peninsula Site B054

**Described by** VLL      **Date** 26/05/00      50 x 50 m

**Location** 150 m N of last rifle bunker, approx. 1.5 km SE of Telecom tower on hill.

**Air Photo**      **Photo** 7      **on Roll** F1      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 474191mE, 7714414mN 474156mE, 7714349mN

**Habitat** Very gentle lower hill slope with stones and areas of red sandy clay with with less stony mantle - slopes towards S.

**Soil** Red sandy clay, large pockets of soil beneath stony areas, especially at lower end of slope.

**Rock Type** Small, fine-rained red-brown stones (15-20 cm) and rocks to 50 cm diameter.

**Vegetation** Corymbia hamersleyana, Ehretia saligna var. saligna low open woodland over Hakea lorea ssp. lorea, Acacia bivenosa, Acacia elachantha open shrubland over Triodia epactia (Burrup form) hummock grassland.

**Veg Condition** Very good, some \*Cenchrus ciliaris and kapok (\*Aerva javanica?).

**Fire Age** N/A

**Notes** Diverse vegetation supported by the more abundant soils.

## Burrup Peninsula Site B055

**Described by** VLL      **Date** 26/05/00      50x50m

**Location** Steep granite slope, SE side of Telecom lookout hill. Approx. 400 m N of end bunker of pistol range.

**Air Photo**      **Photo** 8      **on Roll** F1      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 473908mE, 7714483mN 473939mE, 7714514mN

**Habitat** Steep granite boulder hillslope with outcrop. Granite outcrops/slabs are large and flat/rounded. Pockets of soil beneath granite slabs, outcrops and rocks.

**Soil** Pockets of sandy soil beneath slabs and rocks.

**Rock Type** Granite - coarse-grained pale pink and grey.

**Vegetation** *Terminalia canescens*, *Corymbia hamersleyana*, *Brachychiton acuminatus* (*Ehretia saligna* var. *saligna*) low open woodland over *Rhagodia preissii* subsp. *obovata*, *Ptilotus obovatus* var. *obovatus*, *Scaevola spinescens* (narrow form) open shrubland over *Themeda* sp. Burrup (B84), *Triodia epactia* (Burrup form) open tussock/hummock grassland.

**Veg Condition** Excellent (occasional \**Cenchrus ciliaris* among rocks, rarely *Achyranthes aspera*).

**Fire Age** N/A

**Notes** S facing - less exposed and more shaded - more species (*Chelianthes* etc.).

**Burrup Peninsula Site B057**

**Described by** VLL      **Date** 26/05/00      35x50x20x?

**Location** Triodia mid-level slope - "terrace" - running N-S 30 m E of WEL quarry access track, and 'Chinaman' Gully.

**Air Photo**      **Photo** 12      **on Roll** F1      **Video** N      **E Photo**

**Photo Notes**

**AMG Zone** 50 475025mE, 7720416mN 475021mE, 7720370mN

**Habitat** Sloped terrace between rocky ridges running N-S parallel to WEL access track. Western face, exposed, upper- to mid-level terrace with large stones and boulders.

**Soil** Red-brown sandy clay.

**Rock Type** Light red-brown-grey boulders and outcrops, mostly fine rhyadocite but occasionally coarse-grained granite.

**Vegetation** *Acacia elachantha*, *Grevillea pyramidalis* subsp. *pyramidalis* scattered shrubs over *Indigofera*

monophylla (Burrup form) low open heath over *Triodia epactia* (Burrup form) closed hummock grassland with *Rhynchosia* sp. Burrup (82-1C) open lianes.

**Veg Condition** Excellent, no weeds.

**Fire Age** N/A

**Notes** Transect shape dictated by width of terrace, and a gully on either end. No rockpile vegetation included.

#### Burrup Peninsula Site B058

**Described by** VLL **Date** 26/05/00 **200x2-3 m**

**Location** 200 m in from WEL quarry access track along *Terminalia canescens* gully (opposite to 'Chinaman's' Gully on W side of track.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

#### Photo Notes

**AMG Zone** 50 475071mE, 7720174mN 475103mE, 7720108mN

**Habitat** Drainage line in gully running E-W between two rockpile ridges. Drainage line is only 2-3 m wide with "banks" within the gully each side 2-5 m sampled. \*Only drainage flow line, water in gully.

**Soil** Alluvial dark grey-brown.

**Rock Type** Cobbles, grey to 25 cm and larger red-grey fine grained rhyadocite rocks to 80 cm diameter.

**Vegetation** *Terminalia canescens* low open forest over *Triodia angusta* (Burrup form), *Triodia epactia* (Burrup form), *Cyperus bifax*, *Cyperus vaginalis* open hummock grassland/sedgeland with *Stemodia grossa* very open herbland and *Rhynchosia* cf. *minima* very open lianes.

**Veg Condition** Excellent, no weeds.

**Fire Age** N/A

**Notes** Transect is along drainage flow line approx. 2-3 m only x ~200 m

## Burrup Peninsula Site B059

**Described by** VLL **Date** 26/05/00

**Location** Rockpile above and to the south of B58 gully, parallels gully.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 475092mE, 7720101mN 475043mE, 7720167mN

**Habitat** High rockpile ridge running E-W along gully. North facing rockpile.

**Soil** None

**Rock Type** Med-jointed fine rain red rhyadocite rocks.

**Vegetation** *Brachychiton acuminatus* scattered low trees over *Terminalia supranitifolia*, (*Flueggea virosa* subsp. *melanthesoides*) high open shrubland over *Triodia epactia* (Burrup form), *Cymbopogon ambiguus* very open hummock/tussock grassland with *Dicliptera armata* very open herbland and *Rhynchosia* sp. Burrup (82-1C) very open lianes.

**Veg Condition** Excellent

**Fire Age** N/A

### Notes

**Rock Pile Notes** Rock 80 cm - 1.25-1.5 m diameter, square block shapes not boulders or vertical thrusting rocks.

### Burrup Peninsula Site B060

**Described by** MET      **Date** 26/05/00

**Location** East of Rifle Range.

**Air Photo**      **Photo** 5      **on Roll** M1      **Video** N      **E Photo**

#### Photo Notes

**AMG Zone** 50 474539mE, 7714567mN 474599mE, 7714599mN

**Habitat** Small creekline cutting across colluvium bed in floor of an open valley.

**Soil** Dark brown silty fine sand between cobbles. Paler when dry. Bed (1-3 m).

**Rock Type** Cobbles volcanic rock.

**Vegetation** *Eucalyptus victrix* low open woodland to low woodland over *Acacia coriacea* subsp. *coriacea* scattered tall shrubs over *Dichrostachys spicata*, *Scaevola spinescens* (narrow form), *Ipomoea costata*, *Rhagodia eremaea* scattered shrubs over *Corchorus walcottii*, *Indigofera monophylla* (Burrup form), *Triumfetta appendiculata* (Burrup form) scattered low shrubs over *Triodia angusta* (Burrup form), \**Cenchrus ciliaris* open hummock/tussock grassland to hummock grassland with *Dicliptera armata* annual very open low herbland.

**Veg Condition** Very good to excellent. Buffel stops it being excellent.

**Fire Age** > 5, ?>10 years

**Notes** Recorded the bed (often c/m across) and banks but not the upper edge of the banks where just *Triodia* or where small patches of floodplain occur. Denser patches of *Triodia angusta* have cover of > 50%.

**Rock Pile Notes** Just downslope rom the plot (<15 m) there is a small cliff on the side of the creek. There are a *Brachychiton acuminatus* and *Ficus opposita* there.

### Burrup Peninsula Site B061

**Described by** MET **Date** 26/05/00

**Location** East of Rifle Range

**Air Photo** **Photo** 4 **on Roll** MB **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 474688mE, 7714973mN 474735mE, 7714989mN

**Habitat** Rock pile +/- south facing, fairly steep slope.

#### Soil

**Rock Type** Volcanic, fairly fine grained.

**Vegetation** *Brachychiton acuminatus*, *Ehretia saligna* var. *saligna* scattered low trees over *Flueggea virosa* subsp. *melanthesoides*, *Dichrostachys spicata* tall open shrubland over *Triumfetta appendiculata* (Burrup form) scattered low shrubs with *Dicliptera armata* very open annual herbland with *Porona commixta* scattered lianes.

**Veg Condition** Excellent

**Fire Age** > 10 years.

**Notes** Some large boulders and a small amount of outcrop, but mostly cobbles to small boulders with pebble fill near lower edge.  
*Tephrosia* aff. *densa* (B17) was downslope of this site at the top of a small flowline, below the *Themeda* sp. Burrup (B84) zone.

## Burrup Peninsula Site B062

**Described by** MET **Date** 26/05/00

**Location** South of gas plant (corridor/Gorgon area)

**Air Photo** **Photo** 3 **on Roll** MB **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 474790mE, 7720386mN 474780mE, 7720295mN

**Habitat** Gully with rock pile sides, fairly narrow base (ca. 5-8 m). Has seepage and a series of small temporary pools (some 50 m across).

**Soil** Brown silty sand (medium grained). Has ca. 1-2 cm litter layer.

**Rock Type** Volcanic, fairly fine grained

**Vegetation** *Eucalyptus victrix* low open woodland over *Acacia coriacea* subsp. *coriacea*, *Flueggea virosa* subsp. *melanthesoides*, *Rhagodia eremaea* scattered shrubs over *Triodia angusta* (Burrup form) hummock grassland with a narrow strip of *Cyperus vaginatus*, *Cyperus bifax* sedgeland and *Cassytha capillaris*, *Rhynchosia* sp. Burrup (82-1C) very open lianes.

**Veg Condition** Excellent

**Fire Age** > 10 years

**Notes** Because of the low diversity encountered, an extra 30+ m south of peg 2 was inspected and no additional species recorded. Most of the *Rhynchosia* sp. Burrup (82-1C) was near the rocky

areas. The water is flowing slowly (ca. 30 mm of rain 3 days ago over 2 days). No *Ammannia* observed (searched for in plot). 50 m NW along creek from plot there is a deeper pool (to ca. 50 cm) that is maintained by a 'bank' of calcrete at its lower end. There is a second pool below it. The calcrete appears to be developing (or just has) under an algal sheet. Photo 2, Roll MB1.

### Burrup Peninsula Site B063

**Described by** MET **Date** 26/05/00

**Location** Between Dampier Port and Gas Plant.

**Air Photo** **Photo** 1 **on Roll** M1 **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 474782mE, 7721343mN

**Habitat** Sand dune, second stabilized one from the beach.

**Soil** Pale brown calcareous sand with shell fragments. Pinkish surface in places.

**Rock Type** N/R

**Vegetation** *Acacia bivenosa*, *Acacia coriacea* subsp. *coriacea* scattered tall shrubs over \**Aerva javanica* low shrubland over *Triodia epactia* (Burrup form) hummock grassland.

**Veg Condition** Poor to good; heavily invaded by *Aerva*. Also a track cuts across the site.

**Fire Age** > 5 years

**Notes** The *Indigofera colutea* is heavily grazed. Plot not quite square to keep NE corner out of a flow line.

**Rock Pile Notes****Species List:**

### Burrup Peninsula Site B065

**Described by** MET      **Date** 27/05/00      60 x 40 m  
**Location** North end of Peninsula near end of 'inland' northern track (north/central).  
**Air Photo**      **Photo** 2      **on Roll** M2      **Video** N      **E Photo** 274-6  
**Photo Notes**  
**AMG Zone** 50 483059mE, 7729047mN 483100mE, 7729031mN 483066mE, 7728980mN 483026mE, 7728990mN  
**Habitat** Gentle to moderate upper slope on a ridge, faces west. Has some boulders that may be outcrop.  
**Soil** Silty fine brown sand amongst pebbles and cobbles.  
**Rock Type** Ligh grey medium grained volcanic.  
**Vegetation** *Acacia bivenosa* scattered tall shrubs over *Acacia coleii* scattered shrubs over *Themeda* sp. Burrup (B84), *Triodia epactia* (Burrup form) tussock/hummock grassland.  
**Veg Condition** Excellent.  
**Fire Age** > 5years, ? >10 years.  
**Notes** To avoid rock pile plot is 60 x 40 metres instead of 50 x 50 m. Electronic photos 274, 275, 276.

## Burrup Peninsula Site B066

**Described by** MET **Date** 27/05/00

**Location** North end (centre) of Peninsula.

**Air Photo** **Photo** 26 **on Roll** M2 **Video** Y **E Photo** 278

### Photo Notes

**AMG Zone** 50 483120mE, 7729442mN 483143mE, 7729486mN

**Habitat** Rock pile.

### Soil

**Rock Type** Light grey medium grained volcanic.

**Vegetation** *Ehretia saligna* var. *saligna*, *Brachychiton acuminatus* scattered low trees over *Terminalia supranitifolia* high open shrubland over *Acacia coriacea* subsp. *coriacea*, *Rhagodia eremaea*, *Grevillea pyramidalis* subsp. *pyramidalis*, *Ipomoea costata*, *Scaevola spinescens* (narrow form) scattered shrubs over *Triodia epactia* (Burrup form) very open hummock grassland with *Dicliptera armata* very open annual herbland.

**Veg Condition** Excellent

**Fire Age** > 5 years, ? > 10 years.

**Notes** 2 pegs 50 m apart. Recorded up to crest of rock pile.  
Footage taken on electronic camera.

**Rock Pile Notes** Elongate crest. Some outcrop. Mostly medium (ca. 50 cm) to long (>1 m) boulders. Some small areas with soil surface - mostly on lower part, but one on crest with *Triodia angusta* (Burrup form).

## Burrup Peninsula Site B067

**Described by** MET **Date** 27/05/00

**Location** North end of Burrup Peninsula (near centre of).

**Air Photo** **Photo** 25 **on Roll** M2 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 482977mE, 7729681mN 482950mE, 7729588mN

**Habitat** Narrow plain paralleling creek, slopes to north gently but distinctly and also slopes slightly away from the creek.

**Soil** Pebbly to cobbly with fine brown sand between the pebbles. Some larger rocks.

**Rock Type** N/R

**Vegetation** *Eucalyptus victrix* scattered low trees over *Tephrosia rosea* var. *clementii* low open shrubland over *Triodia epactia* (Burrup form), *Triodia angusta* (Burrup form) hummock grassland.

**Veg Condition** Excellent.

### Fire Age

**Notes** Area with *Sesbania* at base of rock pile avoided. Has some seepage areas, these included. A strip 100 m by approximately 20 m recorded avoiding rock piles and *Sesbania* area at base of large rock pile. Downslope (to north) the *E. victrix* is only away from the creek in a swale parallel to the creek.

## Burrup Peninsula Site B070

**Described by** ASW      **Date** 26/05/00

**Location** Entire grassland bordered by rockpiles and old track on NE side of site, 235 degrees from communications tower ~200 m.

**Air Photo**                      **Photo** 12                      **on Roll** AS      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 472509mE, 7714041mN

**Habitat** Ridge top, boulders grassland above and between rockpiles.

**Soil** Pale red-brown loamy clay; sparse.

### Rock Type

**Vegetation** Ipomoea costata scattered tall shrubs over Cajanus cinereus open shrubland over Themeda sp. Burrup (B84), Triodia epactia (Burrup form) tussock/hummock grassland with Tephrosia aff supina (MET 12,357) very open annual herbland and Rhynchosia cf. minima scattered lianes.

**Veg Condition** Very good.

### Fire Age

**Notes** Two signs, "Danger. Blasting in progress" are in the centre of the plot. Line runs between the two signs +/-E- W, is 60 m long. NW boundary in NE part is 20 m from sign. The \*Aerva javanica areas at the bases of piles are excluded, as are human disturbed areas. More (shallowly) outcroppy than B048.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen Notes
	Abutilon fraseri	+	<1 %	20 cm	B70-3

### Burrup Peninsula Site B071

**Described by** ASW      **Date** 26/05/00

**Location** Upland valley 50-100 m N of B048, WSW to Burrup Road/Dampier-Karratha Road junction.

**Air Photo**                      **Photo** 13                      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes** Looking in(?) from the S corner. The trees and shrubs are excluded (not on xxx).

**AMG Zone** 50 472161mE, 7714097mN 472231mE, 7714120mN

**Habitat** Hummock grasses on gentle slope and saddle between two gullies.

**Soil** Reddish gravelly loam.

**Rock Type** Few boulders and coarse gravel, red-brown, mainly dark.

**Vegetation** Triodia wiseana (Burrup form), Themeda sp. Burrup (B84) hummock/tussock grassland with Tephrosia aff. supina (MET 12,357) very open annual low herbland and Rhynchosia cf. minima very open lianes.

**Veg Condition** Very good - excellent.

**Fire Age** < 1995?

**Notes** The significant stands of Themeda sp. Burrup (B84) and Triodia epactia (Burrup form) are excluded.

Near Peg 1, mixed Triodia epactia (Burrup form) / Triodia wiseana (Burrup form), Aristida.

### Rock Pile Notes

#### Species List:

### Burrup Peninsula Site B072

**Described by** ASW      **Date** 26/05/00

**Location** SW of B049, 50-100 m.

**Air Photo**                      **Photo** 14                      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes**

**AMG Zone** 50 472043mE, 7713952mN 472025mE, 7713924mN

**Habitat**

**Soil** Organic, dark loamy.

**Rock Type** Subangular to angular dark/medium red brown boulders.

**Vegetation** Inadequate data recorded for a vegetation description to be completed.

**Veg Condition** Good - weedy with \*Cenchrus ciliaris, \*Aerva javanica (one patch) and Achyranthes aspera (one patch).

**Fire Age**

**Notes** The entire rockpile (but not edge vegetation) is the plot.

**Rock Pile Notes** As diagram of the rockpiles is in the site notes.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Abutilon fraseri	<1 %		30 cm		
	Acacia coriacea subsp. coriacea	<1 %		2.5 m		
	Achyranthes aspera	<1 %		180 cm		(?annual)
	Aerva javanica	<1 %		1.5 m		
	Alectryon oleifolius	<1 %		1.5 m		
	Brachychiton acuminatus	<1 %		3.5 m		
	Cenchrus ciliaris	<1 %		70 cm		
	Chrysopogon fallax	<1 %		100 cm	B72-1	
	Commelina ensifolia	<1 %		20 cm		
	Cymbopogon ambiguus	<1 %		100 cm		Sometimes as isolated
	Dicliptera armata	<1 %		20 cm		
	Erythrina vespertilio	<1 %		2.0 m		
	Flueggea virosa subsp. melanthesoides	<1 %		3.0 m		
	Ipomoea costata	<1 %		300 cm

	Rhynchosia cf. minima	<1 %		20 cm		Dull. Sometimes as
	Scaevola spinescens (narrow form)	<1 %		2.0 m		
	Tinospora smilacina	+	<1 %	30 cm		
	Trichosanthes cucumerina	+	<1 %	2.5 m		
	Triodia epactia (Burrup Form)		<1 %	40 cm		

### Burrup Peninsula Site B073

**Described by** ASW      **Date** 27/05/00

**Location** = 200 m NE tidal flat, north end XXX Bay at track junction, NW side. A few hundred metres S of Seeripple Passage, W of track.

**Air Photo**                      **Photo** 15                      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes**

**AMG Zone** 50 481031mE, 7729446mN 481020mE, 7729510mN

**Habitat** Very gentle to gentle slope (w/o boulders, large boulders, outcrops, trees or *Triodia angusta* (Burrup form)) on terrace between track.

**Soil** Red/brown clay loam, with gravel to cobble surface.

**Rock Type**

**Vegetation** *Tephrosia rosea* var. *clementii*, *Indigofera monophylla* (Burrup form) low shrubland to low open heath over *Triodia epactia* (Burrup form) hummock grassland

**Veg Condition** Very good - excellent.

**Fire Age** See notes.

**Notes** The shortness of *Grevillea pyramidalis* subsp. *pyramidalis* and some other shrubs suggests relative recent burning, perhaps ca. 1995.  
A small patch of rockpile vegetation within the plot was excluded from the vegetation description and species list, as was an area in the corner of the plot that was more bouldery.

**Rock Pile Notes** See field notes for diagrams.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

### Burrup Peninsula Site B074

**Described by** ASW      **Date** 27/05/00

**Location** ~150 m E of junction in B073 rockpile.

**Air Photo**      **Photo** 18,      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes** Towards E, 18-left end and centre, 19-centre and right end

**AMG Zone** 50 481145mE, 7729438mN 481157mE, 7729360mN

**Habitat** Moderate to steep boulders slope: pockets of vegetation.

**Soil** Reddish brown loam with aggregates at base.

**Rock Type**

**Vegetation** Brachychiton acuminata, Terminalia canescens, Ficus platypoda var. A, Terminalia supranitifolia high open shrubland to low open woodland over Acacia coriacea subsp. coriacea, Ipomea costata scattered tall shrubs over Triodia epactia (Burrup form) scattered hummock grasses

**Veg Condition** Very good to excellent.

**Fire Age** ?

**Notes** Pockets of vegetation. 25-30% of rockpile vegetated.

**Rock Pile Notes** The plot is the entire rockpile, except the margins of grassland and Triodia epactia (Burrup form)/Ipomoea costata on top.

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Abutilon fraseri	+	<1 %	20 cm		=B50-4
	Acacia coriacea subsp. coriacea	1%	1-5%	150 cm		
	Brachychiton acuminatus	3-4%	1-5%	300 cm		
	Cymbopogon ambiguus	+	<1 %	90 cm		
	Ficus platypoda var. A	5%	1-5%	300 cm	B74-2	
	Ipomoea costata	<1%	<1 %	250 cm		
	Jasminum didymum subsp. lineare	+	<1 %	80 cm		
	Mukia maderaspatana	+	<1 %	30 cm	B74-3

	Terminalia supranitifolia	>2%	1-5%	300 cm		
	Tinospora smilacina	+	<1 %	200 cm		
	Trichosanthes cucumerina	+	<1 %	100 cm		
	Triodia epactia (Burrup Form)	+	<1 %	30 cm		
	Triumfetta clementii	+	<1 %	30 cm		(sm)

### Burrup Peninsula Site B076

**Described by** ASW      **Date** 27/05/00

**Location** Base of rockpile = 150 m SE of B74.

**Air Photo**      **Photo**      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes** 20, 22; 200 degrees from below plot or opposite it

**AMG Zone** 50 481189mE, 7729299mN

**Habitat** Moderate slope with denser shrubs and Triodia epactia thin(?) B072, around 2 m outcrop.

**Soil** Good mulch layer, dark chocolate brown clayey loam. Bare patches few.

**Rock Type** Coarse gravel - cobbles, 90% of surface. Cobbles > 70%.

**Vegetation** Indigofera monophylla (Burrup form), Tephrosia rosea var. clementii, Triumfetta appendiculata (Burrup form) low open heath over Triodia epactia (Burrup form), Triodia angusta (Burrup form) hummock grassland to closed hummock grassland.

**Veg Condition** Very good to excellent.

**Fire Age** < 1990? See notes.

**Notes** Probably not burnt for much longer than B72; the *Triodia* ssp. are taller and denser.  
Excluding outcrop.

### Burrup Peninsula Site B077

**Described by** ASW **Date** 27/05/00

**Location** = 60 m SE of rockpile on top of west side tidal flat by searipple passage (follow track from B72).

**Air Photo** **Photo** **on Roll** **AS** **Video** **N** **E** **Photo**

**Photo Notes** 23- towards Peg 1, 24- overlooking CALM BPBS-1 plot marker post and B077, 25- nearby.

**AMG Zone** 50 481334mE, 7730100mN 481335mE, 7730029mN

**Habitat** Essentially flat shell sand surface.

**Soil** Coarse brown sand with shell grit

#### Rock Type

**Vegetation** *Acacia bivenosa*, *Acacia coriacea* subsp. *coriacea* open scrub over *Rhagodia preissii* subsp.

obovata, Threlkeldia diffusa low shrubland with Boerhavia sp. herbland

**Veg Condition** Very good - (good).

**Fire Age**

**Notes** People have been driving through (not the plot) apparently to collect firewood: BPBS drift fence runs into plot and >=1 peg is in it (in faded red tape).

**Rock Pile Notes**

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

**Burrup Peninsula Site B078**

**Described by** ASW **Date** 27/05/00

**Location** ~200 m up side track from junction near B72. At base of rockpile on W side of track.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

**Photo Notes**

**AMG Zone** 50 481094mE, 7729241mN 481048mE, 7729224mN

**Habitat** Steep boulder slope and cliffs.

**Soil** Reddish brown loamy clay at base of rockpile. Red sandy loam in pockets on rockpile.

**Rock Type**

**Vegetation** [Inadequate data recorded for a vegetation description to be completed]

**Veg Condition** Excellent.

**Fire Age**

**Notes** Too dark, no time to finish.

[This site has been left in the dataset but not included in the floristic analysis because the flora list is incomplete.]

### Burrup Peninsula Site B079

**Described by** ASW **Date** 28/05/00

**Location** Slope adjoining 'small' triangular pool, Dampier Salt north side.

**Air Photo** **Photo** **on Roll** AS **Video** N **E Photo** 130

**Photo Notes** 00A from Peg 1 towards Peg 2, 0A from corner.

**AMG Zone** 50 468885mE, 7711237mN 468936mE, 7711280mN

**Habitat** Medium steep slope with Themeda sp. Burrup (B84) among boulders.

**Soil** Skeletal fine grainy loam, some clay, dark brown but not chocolate.

**Rock Type** Pale quartz colour with red tinge outside, coarse blue/grey grain with black flecks inside. Stones-cobbles covering ~70% of surface.

**Vegetation** Corymbia hamersleyana scattered low trees over Acacia pyrifolia (green), Acacia bivenosa, Ehretia saligna var. saligna high open shrubland over Acacia orthocarpa, Acacia coriacea subsp. coriacea, Scaevola spinescens (narrow form) open shrubland over Corchorus walcottii, Ptilotus obovata var. obovatus, Indigofera monophylla (Burrup form) low shrubland over Themeda sp. Burrup (B84), Triodia epactia (Burrup form), Eriachne mucronata (typical form) tussock/hummock grassland.

**Veg Condition** (Very good) to excellent.

#### Fire Age

**Notes** There is one Brachychiton acuminatus on the upper edge of the plot (it is excluded). The gully NW of the plot (and SE of the same slope next to it) is almost a Low Closed Forest (or High Shrubland) of Terminalia canescens, Brachychiton acuminatus (in upper end), Flueggia virosa, Acacia coriacea subsp. coriacea, Ehretia saligna (upper end) and other species.

#### Rock Pile Notes

## Burrup Peninsula Site B080

**Described by** ASW      **Date** 28/05/00

**Location** E of B79 on dark rockpile = 2/3 of the way up. 280d from Dampier Salt admin offices, on W side of salt ponds.

**Air Photo**                      **Photo**                      **on Roll**    **AS**    **Video**    **N**    **E Photo**

**Photo Notes** 1A, 2A.

**AMG Zone** 50 469117mE, 7711375mN 469122mE, 7711434mN 469086mE, 7711426mN 469150mE, 7711412mN

**Habitat** Steep upper slope and cliff face - upper boundary is near summit, jumbled boulders and outcrop with scattered plants and groups of plants - rather than rockpile pockets of vegetation.

**Soil** Where visible, a reddish brown loam

**Rock Type** 4(?) types, see rockpile notes. Over 90% cover.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Very good to excellent.

### Fire Age

**Notes**

1. The gully to the right of centre of the plot (seen from uphill) has piles, non-red surface rock, but it is mostly the semi, coarse-surfaced rock inside.
2. The plateau west of the upper W corner of the plot (< 50 m) is flat, with *Triodia epactia* (Burrup form) to 50 cm tall, most w/o culms, possibly > 70%.

**Rock Pile Notes** 1; light quartzly outside, light grey-green coarse grain with black flecks. 2; heavily weathered, pockmarked outside. Very coarse grain, dark grey-green with large dark flecks. 3; weathered tan brown/b

## Burrup Peninsula Site B081

**Described by** MET      **Date** 27/05/00

**Location** North end of Peninsula (near centre).

**Air Photo**      **Photo** 24      **on Roll** M2      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 482956mE, 7729690mN 482909mE, 7729608mN

**Habitat** Small creek in bottom of valley between two rocky ridges.

**Soil** Fine to coarse grained pebbly sand between cobbles and boulders.

**Rock Type** N/R

**Vegetation** *Eucalyptus victrix* low open woodland over *Terminalia canescens* tall open shrubland over *Tephrosia rosea* var. *clementii* scattered low shrubs over *Triodia angusta* (Burrup form), *Cyperus vaginatus* open grassland/sedgeland with *Sesbania cannabina* tall annual herbland.

**Veg Condition** Excellent

**Fire Age** > 10 years

**Notes** Bed of creek and lower edge of banks recorded. There is a small temporary pool in one braid and a larger one in the main bed.

### Rock Pile Notes

## Burrup Peninsula Site B082

**Described by** MET **Date** 27/06/00

**Location** Northern part of the peninsula (near centre).

**Air Photo** **Photo** 23 **on Roll** MB **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 482826mE, 7729838mN 482864mE, 7729866mN

**Habitat** Steeply sloping rock pile (boulder scree) on valley side, east facing.

**Soil** Orange brown loam between cobbles (vegetated patch).

**Rock Type** Medium grained volcanic

**Vegetation** *Terminalia canescens* high open shrubland (low open woodland) over *Acacia coriacea* subsp. *coriacea*, *Flueggia virosa* subsp. *melanthesoides* high open shrubland over *Scaevola spinescens* (narrow form), *Rhagodia eremaea* scattered shrubs over *Triodia epactia* (Burrup form), *Triodia angusta* (Burrup form) scattered hummock grasses (patches) with *Rhynchosia* sp. Burrup (82-1C) low lianes and *Dicliptera armata* very open annual herbland (patches).

**Veg Condition** Excellent

**Fire Age** >10 years.

**Notes** The vegetation mostly occurs in dense patches where the shrub cover can be > 50% and the *Rhynchosia* sp. Burrup (82-1C) has cover to > 70% in places (elsewhere only at edges). However one strand of vegetatoin had almost no large shrubs (had dense *Triodia angusta* (Burrup form)/*Rhynchosia* sp. Burrup (82-1C)).

**Rock Pile Notes** Boulders varied from medium to large, some cobbly areas near base. About 10-15% had soil cover (vegetation on this). Site sampled was part of a steep slope rather than an isolated rockpile.

**Burrup Peninsula Site** B084

**Described by** MET **Date** 27/05/00

**Location** Adjacent to Dampier Salt works.

**Air Photo** **Photo** **on Roll** **Video** **N E Photo** 129

**Photo Notes**

**AMG Zone** 50 468733mE, 7711282mN 468712mE, 7711291mN 468742mE, 7711253mN 468743mE, 7711269mN

**Habitat** Rock pile/stabilised boulder scree at end of a small spur from a ridge. Includes some stabilised scree.

**Soil** Light brown loam (orange brown surface).

**Rock Type** Almost white fine to medium grained (volcanic?).

**Vegetation** *Brachychiton acuminatus*, *Corymbia hamersleyana* scattered low trees over *Acacia coriacea* subsp. *coriacea*, *Ipomoea costata*, *Dicrostachys spicata* scattered shrubs over *Corchorus walcottii* scattered low shrubs over *Triodia epactia* (Burrup form), *Themeda* sp. Burrup (B84), *Cymbopogon ambiguus* open hummock/tussock grassland with *Rhynchosia* sp. Burrup (82-1C) very open lianes.

**Veg Condition** Excellent

**Fire Age** >5 years, ?>10 years.

**Notes** Plot not large, shaped to capture rockiest area. The *Triodia* is mostly on less bouldery areas.

**Rock Pile Notes** Boulders vary from small to quite large. 25-30% soil cover.

**Species List:**

## Burrup Peninsula Site B085

**Described by** MET      **Date** 27/05/00

**Location** Adjacent to Dampier Salt evaporating areas.

**Air Photo**      **Photo** 21      **on Roll** M2      **Video** N      **E Photo** 131, 132

### Photo Notes

**AMG Zone** 50 469479mE, 7711672mN 469449mE, 7711671mN 469464mE, 7711607mN 469502mE, 7711613mN

**Habitat** Stabilised cobbly bouldery steep slope, faces SSW.

**Soil** Brown clayey loam.

**Rock Type** Volcanic/igneous, medium grained, fairly basic (ca. 50%) dark minerals.

**Vegetation** Corymbia hamersleyana scattered low trees over Acacia pyrifolia (green) scattered tall shrubs over Acacia orthocarpa scattered shrubs over Themeda sp. Burrup (B84), Triodia epactia (Burrup form) tussock/hummock grassland.

**Veg Condition** Excellent

**Fire Age** >5 years, ?>10 years.

**Notes** Adjacent (on west side of) a rock pile. Plot is a rectangle to avoid larger rock pile. At least 2/3 of surface is cobble. Somewhat less Themeda (and more Triodia) in lower part of plot. Triodia >10% in lower part of plot, <5% in upper part. Acacia ?arida e-photos 135-140 inclusive. Hakea chordiphylla 141,142, at bottom of slope. Rock piles with scattered Brachychiton acuminatus and shrubs.

## Burrup Peninsula Site B090

**Described by** VLL **Date** 28/05/00

**Location** White Hill, DSO lease (NW corner of lease).

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 471160mE, 7711928mN 471126mE, 7711903mN

**Habitat** White granite rock outcrop on the very top of very very steep granite hill. Sample includes SE facing slope and crest. Slope has many outcropping coarse grained granite boulders, crest includes small solid (?) rock outcrop 5 m sq.

### Soil

### Rock Type

**Vegetation** *Ficus platypoda* var. *E*, *Flueggea virosa* subsp. *melanthesoides* scattered tall trees to low trees over *Ficus opposita* var. *indecora*, *Acacia coriacea* subsp. *coriacea* scattered shrubs over *Triodia epactia* (Burrup form), *Themeda* sp. Burrup (B84) open hummock/tussock grassland.

### Veg Condition

### Fire Age

**Notes** Sample includes near crest on SE slope with outcrops and boulders and also crest with tiny outcrop. Transect 50 m along face of slope then up to crest. Outcrop veg is marked (O) and crest veg. (C) to distinguish it from the vegetation on the slope. Very exposed site

## Burrup Peninsula Site B091

**Described by** VLL **Date** 28/05/00 **28 m x72 m**

**Location** White Hill, S of Dampier Road, N-W cnr of DSO lease on W facing exposed slope.

**Air Photo** **Photo** 20 **on Roll** F1 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 470993mE, 7711925mN 470974mE, 7711965mN 471001mE, 7711973mN

### Habitat

**Soil** Light pinky sandy soil - skeletal.

### Rock Type

**Vegetation** *Acacia coriacea* subsp. *coriacea*, *Scaevola spinescens* (narrow form) scattered shrubs over *Indigofera monophylla* (Burrup form), *Corchorus walcottii*, *Ptilotus obovatus* var. *obovatus* low shrubland over *Themeda* sp. Burrup (B84), *Triodia epactia* (Burrup form) tussock/hummock grassland.

**Veg Condition** Excellent (rare occurrences of \**Cichrus ciliaris* and \**Aerva javanica*)

**Fire Age** N/A

**Notes** Transect shape and size dictated by available *Themeda* sp. Burrup (B84)/granite boulder slope uninterrupted by rockpiles 28 m x 72 m down slope.

**Rock Pile Notes**

	Tinospora smilacina	<1 %		1.5 m		

**Burrup Peninsula Site B157**

**Described by** ASW      **Date** 2/06/00

**Location** Triodia areas in B156.

**Air Photo**      **Photo** Y      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes** 5A, 6A (Both from rockpile 250 degrees to Peg 1), 7A.

**AMG Zone** 50 478527mE, 7726058mN 478494mE, 7725999mN

**Habitat** Bouldery, grassy gentle to moderately steep slope.

**Soil** Skeletal red clay loam, approx. 5% visible.

**Rock Type** Cobbles of medium/fine grain. Cover approx. 80%. Outcrops of same material approx. 10%.

**Vegetation** Acacia colei, Cullen pustulatum high open shrubland over Indigofera monophylla (Burrup form), Triumfetta appendiculata (Burrup form) low shrubland over Cymbopogon ambiguus, Triodia epactia (Burrup form), Cymbopogon ambiguus hummock/tussock grassland with Rhynchosia cf. minima very open lianes.

**Veg Condition** Excellent

**Fire Age**

**Notes** Plots B156 and B157 are the same site, but B156 is rockpiles and their vegetation and B157, this plot, is non rockpile, the grassy part.

There is 1 1.2 m tall Acacia coriacea subsp. coriacea(?) (narrow) shrub below/near plot among more A coriacea(?) (broad) shrubs.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Acacia colei	5-10	5-10%	2.5 m		Broad

**Burrup Peninsula Site B162**

**Described by** VLL **Date** 2/06/00 **Size** 40 x 70 m

**Location** Talu Valley - valley beneath talu site ~700 m south of Burrup Road.

**Air Photo** **Photo** 20 **on Roll** F3 **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 476506mE, 7720299mN 476494mE, 7720225mN 476520mE, 7720271mN 476464mE, 7720251mN

**Habitat** Disturbed valley between two N-S parallel rock ridges (Talu site on north side). The corridor was originally an old woodside access track but has revegetated well with *Triodia angusta*, *Acacia bivenosa* and *A. orthocarpa*. *Corymbia* probably never destroyed.

**Soil** Paly grey-brown sandy loam with stones and calcrete material. Looks imported - doesn't match surrounding red rock profile.

**Rock Type**

**Vegetation** *Corymbia hamersleyana* low woodland over *Acacia inaequilatera* high open shrubland over *Acacia bivenosa*, *Cassia glutinosa*, *Grevillea pyramidalis* subsp. *pyramidalis* shrubland over *Indigofera monophylla* (Burrup form) low open shrubland over *Triodia angusta* (Burrup form), *Triodia epactia* (Burrup form), *Chrysopogon fallax* hummock/tussock grassland.

**Veg Condition** Very good, occasional Kapok and Buffel.

**Fire Age** N/A

**Notes** Soil Notes cont: Could have some marine sand - shell fragments in dirt. Undisturbed red-brown alluvial soil with small red-brown stones and calcrete some with black algal mat. Marine sand was used on other WEL borrow area.  
Disturbed area of transect =10 m wide x 70 m long. \*D denotes area disturbed for old access track, otherwise area under *Corymbia*.

**Burrup Peninsula** Site B163

Described by VLL Date 2/06/00

5 x 100 m

**Location** Approximately 800 m to 1 km east of Burrup Road. High rock gully 5 km north of Talu Valley.

**Air Photo**                               **Photo** 21                       **on Roll** F3   **Video** N   **E Photo**

**Photo Notes**

**AMG Zone** 50 476865mE, 7720424mN 476899mE, 7720402mN

**Habitat** Flat narrow grassed drainage - valley, 4 m wide through rockpiles on upper slopes.

**Soil** Red sandy loam

**Rock Type** Medium sized red-brown fine grained rhyadocite.

**Vegetation** Brachychiton acuminatus, Terminalia supranitifolia scattered low trees over Dichrostachys spicatus, Acacia coriacea subsp. coriacea, Flueggea virosa ssp. melanthesioides high open shrubland over Triodia epactia (Burrup form), Cymbopogon ambiguus, Cyperus bifax hummock/tussock grassland/sedgeland with Dicliptera armata open herbland.

**Veg Condition** Excellent, no weeds.

**Fire Age** N/A

**Notes** High narrow Dichrostachys spicata (tall shrubs) gully - flat gully.

**Rock Pile Notes**

**Burrup Peninsula Site B166**

**Described by** VLL **Date** 3/06/00

**Location** SE side of Syntrolem site (maybe just outside lease boundary).

**Air Photo** **Photo** 26 **on Roll** F3 **Video** Y **E Photo** 265, 266

**Photo Notes**

**AMG Zone** 50 475600mE, 7717628mN 475565mE, 7717629mN 475578mE, 7717543mN

**Habitat** Very gentle slope down toward saline flat area (SE-NW) from higher rocky slopes. Areas is between drainage zone at foot of hills south side and drainage gully north side.

**Soil** Brown sandy colluvial soil - part of colluvial fan associated with drainage lines from higher slopes.

**Rock Type** Red-grey stones and rocks 10-30 cm diameter.

**Vegetation** Corymbia hamersleyana scattered low trees over Grevillea pyrimidalis subsp. pyramidalis shrubland to open heath over Corchorus walcottii, Triumfetta appendiculata (Burrup form), Tephrosia sp. B Kimberley Flora (C.A. Gardner 7300) low shrubland to low open heath over Triodia epactia (Burrup form), Eriachne obtusa hummock/tussock grassland.

**Veg Condition** Excellent, no weeds.

**Fire Age** N/A

**Notes** Rare vegetation type with relatively dense *Grevillea pyramidalis* subsp. *pyramidalis* heath.  
Relatively protected site (from winds) being low and surrounded by hillslopes. Good colluvial soil (part of wider colluvial fan system).

**Rock Pile Notes**

**Burrup Peninsula Site B169**

**Described by** ASW                      **Date**                      3/06/00

**Location** Hearson's Cove. Pale rockpile to NNE of B170. First rockpile S of Hearson's Cove beach - saddle on S of first summit and summit itself.

**Air Photo**                      **Photo**    18A                      **on Roll**    AS    **Video**    N    **E Photo**

**Photo Notes**

**AMG Zone** 50 478902mE, 7718038mN 478920mE, 7718101mN 478877mE, 7718079mN 478939mE, 7718064mN

**Habitat** Bouldery, moderately steep slopes, which are more vegetated and with less angular boulders and rocks than slopes of dark rockpiles

**Soil** Brown silty loam with lots of coarse fragments - gravel, aggregate.

**Rock Type** Predominantly (1) coarse grained paler rock with lots of quartz (2) some minor outcrops of fine-grained dark rock, weathers rust brown, very angular. Cobbles and boulders approx. 80%

**Vegetation** *Brachychiton acuminatus*, *Acacia coriacea* subsp. *coriacea*, *Ehretia saligna* var. *saligna* high open shrubland over *Terminalia supranitifolia*, *Cassia glutinosa*, *Grevillea pyramidalis* subsp. *pyramidalis*, *Dicrostachys spicatus*, *Flueggea virosa* ssp. *melanthesioides*, *Scaevola spinescens* (narrow form), *Stylobasium spathulatum* open shrubland to shrubland over *Ptilotus obovatus* var. *obovatus*, \**Aerva javanica*, *Corchorus walcottii*, *Alectryon oleifolius* low open shrubland to low shrubland over *Triodia epactia* (Burrup form), *Themeda* sp. Burrup (B84) hummock/tussock grassland.

**Veg Condition** Very good - grassier and weedier than most dark rockpiles.

**Fire Age** N/A

**Notes** More diffuse and uniform and richer in species than dark rockpiles.

## Burrup Peninsula Site B171

**Described by** ASW      **Date** 3/06/00  
**Location** ~500 m south of Hearson Cove picnic area over first rockpile ridge through watercourse.  
**Air Photo**                      **Photo** Y                      **on Roll** AS      **Video** N      **E Photo**  
**Photo Notes** 19A, 20A (from NW of Peg 2)  
**AMG Zone** 50 478946mE, 7717454mN 478935mE, 7717435mN  
**Habitat** Pocket of soil and calcrete with gravel and rocks in middle of rockpile of boulders and large boulders - slope gentle.  
**Soil** Brown loose loamy soil where present.  
**Rock Type** Calcrete present in lower end, very heavily weathered and pitted rocks red-brown on outside. Coarse grained and quartz on inside. >50% cover boulders rounded.  
**Vegetation** Brachychiton acuminatus low open woodland over Flueggea virosa subsp. melanthesoides, Terminalia supranitifolia scattered tall shrubs over Scaevola spinescens (narrow form), Dichrostachys spicata, Acacia coriacea subsp. coriacea shrubland over Abutilon fraseri, Ptilotus obovatus var. obovatus low shrubland over Triodia angusta (Burrup form) very open hummock grassland.  
**Veg Condition** Poor - much \*Aerva javanica, otherwise very good to excellent.  
**Fire Age** N/A  
**Notes** [This site is too small to be used in floristic analysis but must have been a fairly large rock pocket, so retained.]

**AMG Zone** 50 478942mE, 7717425mN 478887mE, 7717416mN  
**Habitat** Pocket of hummock grassland +/- level +/- surrounded by rockpiles.  
**Soil** Brown sticky clay seemingly associated with calcrete, red clay loam, where present approx. 5% cover with gravel.  
**Rock Type** Calcrete pavement in parts, coarse calcrete gravel throughout, approx. 10% cover. Coarse grained quartz rock, cobbles ~70% cover, some outcropping of same material.  
**Vegetation** Ipomoea costata, Indigofera monophylla (Burrup form) scattered low shrubs over Triodia wiseana

(Burrup form), *Triodia angusta* (Burrup form) hummock grassland.

**Veg Condition** Very good.

**Fire Age** N/A

**Notes** Excludes edges (I.e. trees and large shrubs and their associated species). *Stylobasium* shrubs are common in places on the edge, and *Pittosporum phylliraeoides* is on one side. (the *Triodia angusta* (Burrup form) parts are closed hummock grassland)

#### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Aerva javanica</i>	1	1-5%	40 cm		
	<i>Gomphrena cunninghamii</i>	+	<1 %	10 cm		
	<i>Indigofera monophylla</i> (Burrup form)	1	1-5%	50 cm		Near edge
	<i>Ipomoea costata</i>	+	<1 %	40 cm		
	<i>Scaevola spinescens</i> (narrow form)	+	<1 %	20 cm		
	<i>Solanum horridum</i>	+	<1 %	10 cm		
	<i>Streptoglossa decurrens</i>	1	1-5%	30 cm		Usual
	<i>Triodia angusta</i> (Burrup Form)	15-20	10-25%	60 cm		+/- glabrous ligule
	<i>Triodia wiseana</i> (Burrup Form)	30	25-33.3%	30 cm		Hairy ligule

### Burrup Peninsula Site B173

**Described by** ASW **Date** 3/06/00

**Location** Transect from Peg 2 of B172, southwest along rockpile for 100 metres.

**Air Photo** **Photo** Y **on Roll** AS **Video** N **E Photo**

**Photo Notes** 23A (foreground), 24A (pockets on rockpiles).

**AMG Zone** 50 478887mE, 7717416mN 478882mE, 7717338mN

**Habitat** Gently to moderately sloping pockets of vegetation along moderately to steeply sloping bare rockpile, bouldery slopes.

**Soil** Two different soils: (1) Brown clay, calcrete present, supports *Triodia*. (2) Red sandy loam, coarse grained rock present

**Rock Type** Same coarse grained quartzzy rock as before, some calcrete, soil cover ~2%.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Excellent.

**Fire Age** N/A

**Notes** B173 covers five patches/pockets of vegetation.

## Burrup Peninsula Site B174

**Described by** ASW      **Date** 3/06/00

**Location** Spinifex gully in rockpile adjoining SW side of B173.

**Air Photo**                      **Photo** 24A                      **on Roll** AS      **Video** N      **E Photo**

### Photo Notes

**AMG Zone** 50 478813mE, 7717377mN 478797mE, 7717311mN

**Habitat** Moderately steep slope of vegetation strip.

**Soil** Red clay in open, covered with layer of organic material under *Ficus* etc. Approx. 10% cover.

**Rock Type** Calcrete, mainly coarse gravel, some pavement, approx. 40% cover. Coarse grained quartzite one (see B171), mainly cobbles, some outcropping, approx. 50% cover.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Excellent.

**Fire Age** N/A

## Burrup Peninsula Site B182

**Described by** MET      **Date** 3/06/00

**Location** Pistol Ranges east from Telstra tower.

**Air Photo**      **Photo** 4      **on Roll** MB **Video** Y **E Photo** 271

### Photo Notes

**AMG Zone** 50 473364mE, 7714602mN 473398mE, 7714660mN

**Habitat** Rock outcrop.

**Soil** Light brown (orangish).

**Rock Type** Medium (to coarse) grained whitish grey, mostly quartz and feldspar.

**Vegetation** *Corymbia hamersleyana*, *Terminalia supranitifolia* scattered low trees over *Flueggea virosa* subsp. *melanthesoides*, *Ipomoea costata* scattered tall shrubs over *Scaevola spinescens* (narrow form), *Acacia tenuissima*, *Cajanus cinereus*, *Rhagodia eremaea* scattered shrubs over *Corchorus walcottii*, *Indigofera monophylla* (Burrup form) scattered low shrubs over *Themeda* sp. Burrup (B84), *Triodia epactia* (Burrup form) tussock/hummock grassland.

**Veg Condition** Very good.

**Fire Age** ?10 years.

**Notes** Peg 1 at base of large rounded boulder at WSE end of outcrop.

**Rock Pile Notes** Linear outcrop, about 50% soil cover, rocks mostly rounded, some angular.

### Burrup Peninsula Site B183

**Described by** MET      **Date** 3/06/00

**Location** Pistol Range ENE of Telstra tower.

**Air Photo**                      **Photo**                      **on Roll**                      **Video**    **N**    **E Photo**                      274

#### Photo Notes

**AMG Zone** 50 473467mE, 7714870mN 473415mE, 7714840mN

**Habitat** Strip along the base of the north facing side of a large rockpile.

#### Soil

**Rock Type** Fine grained, grey igneous/volcanic.

**Vegetation** *Ehretia saligna* var. *saligna*, *Brachychiton acuminatus* scattered low trees over *Flueggea virosa* subsp. *melanthesoides*, *Ipomoea costata*, *Terminalia supranitifolia* scattered tall shrubs over *Rhagodia eremaea*, *Scaevola spinescens* (narrow form) scattered shrubs over *Triodia epactia* (Burrup form) open hummock grassland with *Rhynchosia* sp. Burrup (82-1C) open lianes and *Dicliptera armata* annual open herbland.

**Veg Condition** Excellent.

**Fire Age** > 10 years.

**Notes** *Corymbia hamersleyana* present further along rockpile. E-photo 275 = *Brachychiton acuminatus*.

**Rock Pile Notes** North facing side of a large mound of angular boulders on a crest. Soil non-existent on slope but +/- 50% of surface in strip sampled at the base.

### Burrup Peninsula Site B185

**Described by** MET      **Date** 4/06/00

**Location** Valley near Jump up.

**Air Photo**                      **Photo** 2                      **on Roll**    **MB**    **Video**    **Y**    **E Photo**    284

**Photo Notes**

**AMG Zone** 50 479119mE, 7724928mN 479144mE, 7724900mN 479168mE, 7724924mN 479166mE, 7724974mN

**Habitat** Gentle slope in valley floor, north facing.

**Soil** Gravelly/cobbly slightly orangish light brown loamy fine sand.

**Rock Type** Grey fine grained (?volcanic).

**Vegetation** *Acacia bivenosa*, (*Hakea chordophylla* (in clumps)) high shrubland over *Rhagodia eremaea*, *Scaevola spinescens* (narrow form), *Adriana tomentosa* scattered shrubs over *Corchorus walcottii* scattered low shrubs over *Triodia epactia* (Burrup form) hummock grassland.

**Veg Condition** Excellent.

**Fire Age** > 10 years.

**Notes** Has small clumps of *Hakea* individuals with *Scaevola*, *Rhagodia* - possibly on areas where rock near surface.

*Pluchea tetranthera* was just outside this site.

## Burrup Peninsula Site B186

**Described by** VLL **Date** 3/06/00

**Location** 700 m north of Telecom tower above Pistol Club, and top of range.

**Air Photo** **Photo** 2 **on Roll** F4 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 473450mE, 7714718mN 473392mE, 7714714mN 473447mE, 7714767mN 473391mE, 7714719mN

**Habitat** Upper gentle south-east facing slope with granite boulders 20-40 cm.

**Soil** Very fine red loam.

### Rock Type

**Vegetation** *Acacia tenuissima* low shrubland over *Themeda* sp. Burrup (B84) grassland to closed grassland over *Goodenia stobbsiana* very open herbland.

**Veg Condition** Excellent, no weeds.

**Fire Age** Not obvious.

**Burrup Peninsula Site B191**

**Described by** MET      **Date** 4/06/00  
**Location** Valley on south side of Jumpup Ridge.  
**Air Photo**                      **Photo** 1                      **on Roll** MB      **Video** N      **E Photo** 285-8  
**Photo Notes**  
**AMG Zone** 50 479882mE, 7724988mN 479741mE, 7725042mN  
**Habitat** Valley floor - has been incised by a creek to one side (north), slopes up to south.  
**Soil** Brown sandy fine loam, cobbly and pebbly.  
**Rock Type**  
**Vegetation** Corymbia hamersleyana scattered low trees over Grevillea pyramidalis subsp. pyramidalis scattered tall shrubs over Indigofera monophylla (Burrup form), Tephrosia rosea var. clementii scattered shrubs to low open shrubland over Triodia epactia (Burrup form) hummock grassland with Indigofera linifolia, Indigofera trita, Tephrosia aff. supina (MET 12, 357) annual herbland (patches).

**Veg Condition** Excellent.

**Fire Age**

**Notes** Transect parallel to track on both sides of pit; only in the Triodia epactia (Burrup form). The Indigofera monophylla (Burrup form) varies from +< 5%, and the Tephrosia rosea var. clementii does the same. Damper area near peg 1 has Tephrosia aff. supina > 80%. Site varies slightly in dryness/dampness.

**Burrup Peninsula Site B192****Described by BM Date 5/06/00**

**Location** East end of valley below Jumpup.

**Air Photo** **Photo** **on Roll** **Video** **Y** **E Photo** 293,4

**Photo Notes** E-photo 300 taken of site from opposite slope.

**AMG Zone** 50 481469mE, 7725986mN 481501mE, 7726030mN

**Habitat** Rockpile above relatively wide gully.

**Soil** Clayey loam, lots of organic matter, pale brown with some calcerous nodules.

**Rock Type**

**Vegetation** *Brachychiton acuminatus*, *Terminalia supranatifolia*, *Clerodendrum tomentosum* scattered low trees to low open woodland over *Acacia coriacea* subsp. *coriacea*, *Flueggea virosa* subsp. *melanthesoides*, *Ficus platypoda* var. *A* high open shrubland over *Rhagodia eremaea*, *Abutilon* aff. *dioicum* (HD72-14), *Ipomoea costata* scattered shrubs over *Alectryon oleifolius*, *Abutilon fraseri* scattered low shrubs over *Triodia angusta* (Burrup form) very open hummock grassland with *Cassytha capillaris*, *Mukea maderaspatana* scattered lianes and *Dicliptera armata* very open herbland.

**Veg Condition** Healthy, undisturbed, some dead *Acacia coriacea* subsp. *coriacea*.

**Fire Age** No evidence of fire.

**Notes** Small pockets of vegetation, ~ 5-10 m diameter. Scattered trees, ~ 3 m of *Brachychiton acuminatus* and *Terminalia supranatifolia* less than 25% cover, dense layer of tall shrubs ~ 2 m dominated by *Acacia coriacea* subsp. *coriacea* and *Ficus platypoda* 40-50%, some smaller shrubs < 2 m, mainly *Abutilon* and *Rhagodia* < 10%, understorey dominated by *Dicliptera* and *Triodia angusta* (Burrup form) 50-60%.

**Rock Pile Notes** Rock size ~60-100 cm diameter, soil cover < 20%.

**Species List:**

## Burrup Peninsula Site B193

**Described by** MET      **Date** 5/06/00

**Location** East end of valley below Jumpup.

**Air Photo**      **Photo**      **on Roll**      **Video**    Y    **E Photo**      289-90,29

### Photo Notes

**AMG Zone** 50 481332mE, 7725860mN 481386mE, 7725933mN

**Habitat** Gently sloping floor of narrow part of a valley between two ridges.

**Soil** Pebbly dark brown clayey fine sand amongst cobbles and round boulders.

### Rock Type

**Vegetation** *Eucalyptus victrix* low open forest over *Acacia coriacea* subsp. *coriacea*, *Acacia coleii* and *Acacia bivenosa* scattered tall shrubs over *Adriana tomentosa*, *Stylobasium spathulatum* and *Flueggea virosa* subsp. *melanthesoides* scattered shrubs over *Indigofera monophylla* (Burrup form) scattered low shrubs over *Triodia angusta* (Burrup form), *Themeda* sp. Burrup (B84) hummock/tussock grassland with *Dicliptera armata* very open herbland and *Rhychosia* sp. Burrup (82-1C), *Cassytha capillaris* open lianes.

**Veg Condition** Excellent, except where impacted by vehicle tracks.

**Fire Age** > 10 years.

**Notes** There is a track through the area recorded. The part of the valley recorded is that that has the *E. victrix* vegetation, this varies from about 5-10 m across. Next to it, there is a narrow strip that has scattered *Corymbia* over *Triodia angusta* (Burrup form). The valley has area where *E. victrix* is not on flow lines but on cobbly slopes over *Triodia angusta* (Burrup form) and with some *Corymbia* and very few shrubs. Sometimes a strip of *Themeda* sp. Burrup (B84) along base of rockpiles. There is a slight flow (patchily above surface) in the bottom of the valley. Where the stream braids, the areas between the braids have *Triodia angusta* hummock grassland. *Pluchea dentex* collected circa. 100 m upstream (see footage of pools), foliage bright mid green, fleshy, flowers pink, mulit-stemmed shrub 60 cm tall, 1 m across at: 50K 04 81 521, UTM: 77 26 690. About six plants, but area not searched.  
*Peplidium* sp. E (Flora of Australia) was at a creek downstream from this site in similar vegetation (green to reddish plants).  
A *Chara* species was recorded at the site (in a pool) but was not included in the analysis.

## Burrup Peninsula Site B194

Described by MET Date 5/06/00

### Location

Air Photo Photo on Roll Video Y E Photo 304

### Photo Notes

AMG Zone 50 481169mE, 7725744mN 481238mE, 7725805mN

**Habitat** Part of valley floor that forms a "shoulder" of colluvial/alluvial material well above flowline to a steep slope.

**Soil** Orange brown gravelly loam amongst cobbles about 50% of surface pebbles or angular cobbles.

### Rock Type

**Vegetation** *Corymbia hamersleyana* low mallee woodland over *Acacia bivenosa*, *Acacia inaequilatera* scattered tall shrubs over *Acacia colei* and *Acacia orthocarpa* scattered shrubs over *Indigofera monophylla* (Burrup form), *Corchorus walcottii* scattered low shrubs over *Themeda* sp. Burrup (B84), *Triodia epactia* (Burrup form), *Triodia angusta* (Burrup form) tussock/hummock grassland.

**Veg Condition** Excellent (pristine?).

**Fire Age** > 10 years.

**Notes** Just to west slopes down and has small patch of *Eucalyptus xerothermica* (some *Triodia wiseana* (Burrup form)) and then back to =B194.

*Corymbia* "A" has thin platelets on trunk, pale grey over cinnamon tones, extends on to all except twigs.

*Corymbia* "B" has white bark on upper branches, thin grey platelets, cinnamon tones under them.

## Burrup Peninsula Site B195

**Described by** BM      **Date** 5/06/00

**Location** North side of gully/valley below Jumpup.

**Air Photo**      **Photo**      **on Roll**      **Video**    **Y**    **E Photo**      305-7

**Photo Notes** 305, *E. xerothermica*; 306, *E. victrix*; 307, from opposite slope.

**AMG Zone** 50 481154mE, 7725777mN 481115mE, 7725749mN

**Habitat** Rockpile above broad gully/valley.

**Soil** Clayey loam, reddish-brown, lots of organic matter.

**Rock Type**

**Vegetation** *Eucalyptus victrix*, *Eucalyptus xerothermica*, *Ehretia saligna* var. *saligna*, *Clerodendrum tomentosum*, (*Brachychiton acuminatus*) scattered low trees over *Flueggea virosa* subsp. *melanthesoides*, *Acacia coriacea* subsp. *coriacea* and *Dicrostachys spicata* scattered tall shrubs over *Rhagodia eremaea*, *Abutilon* aff. *dioicum* (HD72-14), *Scaevola spinescens* (narrow form) scattered shrubs over *Triodia angusta* (Burrup form), *Triodia epactia* (Burrup form) scattered hummock grasses with *Dicliptera armata* very open herbland.

**Veg Condition** Good, very healthy.

**Fire Age** No evidence of fire.

**Notes**

**Rock Pile Notes** Slope facing ~ south. Rock sizes 20-60 cm, and many big diameter boulders in scree area, soil cover < 2 %.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Abutilon</i> aff. <i>dioicum</i> (HD72-14)	< 1	<1 %	1.5 m		See B192 {on height}

**Photo Notes**

**AMG Zone** 50 475465mE, 7719708mN 475539mE, 7719727mN 475498mE, 7719695mN 475505mE, 7719669mN

**Habitat** Upper stony rocky hill slope facing E-SE, sloping E-SE to shallow gully, then down to Burrup Road. Very rocky/stony.

**Soil** Skeletal red-brown silty loam beneath rocky mantle.

**Rock Type** Fine grained grey rhyodacite, weathering red-brown. Rocks are block type, 20-30 cm diameter,

and form a uniformly consistent mantle over slope.

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis*, *Acacia bivenosa*, *Acacia elachantha* open shrubland over *Triodia epactia* (Burrup form) closed hummock grassland with *Rhynchosia* cf. *minima*, *Vigna* sp. Burrup (B18) very open lianes.

**Veg Condition** Excellent.

**Fire Age** Not obvious.

**Notes** Relatively dense *T. epactia* (Burrup form) grassland over very consistent stony/rocky mantle.

#### Rock Pile Notes

#### Burrup Peninsula Site B217

**Described by** VLL **Date** 12/06/00 **Size** 70 x 30 m

**Location** Approx. 500 m west from Burrup Road, hillslope using DRD corridor centre-line pegs as centre of plot.

**Air Photo** **Photo** 25 **on Roll** F5 **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 475385mE, 7719611mN 475459mE, 7719580mN

**Habitat** East facing slope, upper-mid level with consistent layer of rocks, stones, and small rock outcrops.

**Soil** Red-brown silty soil beneath consistent layer of rock.

**Rock Type** Block and rounded rocks, 20-40 cm diameter, fine-grained grey rhyadocite, weathering red-brown.

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis*, *Acacia colei* high open shrubland over *Triodia epactia* (Burrup form), *Cymbopogon ambiguus* hummock/tussock grassland with *Vigna* sp. Burrup (B18), *Rhynchosia* cf. *minima* very open lianes.

**Veg Condition** Excellent.

**Fire Age** Not evident.

**Notes** *Cymbopogon/Triodia epactia* (Burrup form) slope: unusual to have so much *Cymbopogon* in a slope habitat, there is another slope ~ 200 m to north of this site that is the same. Transect is 70 x 30 m to avoid rockpiles and gullies. Area generally is comprised of undulating narrow slopes with gullies and rockpiles, therefore difficult to find "clean" 50 x 50 m.

#### Rock Pile Notes

	<i>Vigna</i> sp. Burrup (B18)	3-5%	1-5%			Creeper, see 216.

#### Burrup Peninsula Site B218

**Described by** VLL **Date** 12/06/00

**Location** DRD corridor, ~ 1.25 km west of Burrup Road - shallow valley beneath rocky hillslopes running south from centre of corridor with narrow stony, cobbly drain at very centre.

**Air Photo** **Photo** 1 **on Roll** F6 **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 475178mE, 7719736mN 475193mE, 7719699mN

**Habitat** Shallow valley floor between two hills, relatively protected running north-south. Hillslopes have rocky sides, and rocks included near valley as it narrows. Continues as a branch from B219 (see sketch B219).

**Soil** Grey brown alluvial soil with cobbles, 5-10 cm diameter.

**Rock Type** Cobbles mostly 5-10 cm, scattered larger blocky rocks to 20 cm.

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis*, *Ipomoea costata* open shrubland over *Corchorus walcottii*, *Indigofera monophylla* (Burrup form), *Tephrosia rosea* var. *clementii* low open shrubland over *Triodia angusta* (Burrup Form) closed hummock grassland with *Rhynchosia* sp. Burrup (82-1C) very open lianes.

**Veg Condition****Fire Age**

**Notes** The valley is dominated by dense *Triodia angusta* (Burrup form) grassland, but a very narrow drain runs through the *T. angusta* (Burrup form), producing species associations with a deeper drainage system. These are indicated on the sheets.

**Rock Pile Notes****Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Acacia elachantha</i>	+	<1 %	25 cm		As for B217.
	<i>Acacia orthocarpa</i>	+	<1 %	35 cm		Rarely.

**Burrup Peninsula Site B219**

**Described by** VLL **Date** 12/06/00

**Location** DRD corridor, east-west gully parallel to centre line, approx. 1.5 km from Burrup Road.

**Air Photo** **Photo** 2 **on Roll** F6 **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 475178mE, 7719736mN 475251mE, 7719748mN

**Habitat** Narrow (5-7 m) drainage gully east-west beneath two hills, with alternating *Triodia* slope and rocky ridges (small terrace like). Gully is shallow, no distinct drain line.

**Soil** Red brown silty loam.

**Rock Type** Generally 10-20 cm weathered red-brown.

**Vegetation** *Ipomoea costata*, (*Acacia coleii*) shrubland over *Indigofera monophylla* (Burrup form), *Corchorus walcottii* low open heath over *Triodia epactia* (Burrup form), *Cymbopogon ambiguus* hummock/tussock grassland.

**Veg Condition** Excellent.

**Fire Age** Not obvious.

**Notes** Transect 5-7 m x 85 m - in accordance with habitat.

**Rock Pile Notes****Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

## Burrup Peninsula Site B220

**Described by** VLL **Date** 12/06/00

**Location** Terminalia gully on northern side of DRD corridor, approx. 500 m from Burrup Road.

**Air Photo** **Photo** 3 **on Roll** F6 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 475519mE, 7719845mN 475566mE, 7719777mN

**Habitat** Rocky gully beneath steeper rockpiles, and rocky hillslopes running west-east down toward Burrup Road.

**Soil** Alluvial grey-brown medium fine loam.

**Rock Type** Small cobbles to boulders, 25-30 cm, fine-grained, grey.

**Vegetation** *Terminalia canescens* low woodland to low open forest over *Abutilon fraseri* low open shrubland over *Cyperus vaginatus*, *Cyperus bifax*, *Triodia epactia* (Burrup form) sedgeland/hummock grassland with *Sesbania cannabina* tall very open herbland and *Rhynchosia* sp. Burrup (82-1C) open lianes.

**Veg Condition** Excellent, no weeds recorded.

**Fire Age** Not obvious.

## Burrup Peninsula Site B230

**Described by** VLL **Date** 12/06/00

**Location** Northern end of Talu valley along drainage line (western side Syntroleum pipeline).

**Air Photo** **Photo** 8 **on Roll** **Video** N **E Photo**

**Photo Notes** Photo 8 (6 & 7 of Epic (Energy) "weedline").

**AMG Zone** 50 476650mE, 7720527mN 476683mE, 7720576mN

**Habitat** Stony drainage gully running N-S along toe of rockpile ridge.

**Soil** Deepish dark red-grey alluvial soil.

**Rock Type** Grey and red cobbles and stones.

**Vegetation** *Eucalyptus victrix*, (*Terminalia canescens*) low woodland over *Flueggea virosa* subsp. *melanthesoides*, *Acacia coriacea* subsp. *coriacea* scattered shrubs over *Cyperus vaginatus*, *Cyperus bifax*, *Triodia angusta* (Burrup form), *Triodia epactia* (Burrup form) sedge/land/hummock grassland with *Sesbania cannabina* tall annual herbland and *Stemodia grossa*, *Dicliptera armata* open annual herbland.

**Veg Condition** Very good, occasional Kapok and Buffel.

**Fire Age** Not obvious.

**Notes** Drainage line runs along toe of rockpile ridge, 1.5 - 4 m wide, some water still in three pools, cobbles and stony base.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Abutilon fraseri</i>	+	<1 %	20 cm	B230-2	{recorded twice}

### Burrup Peninsula Site B231

**Described by** VLL **Date** 27/06/00

**Location** South over high rocky ridge, south side of Eucalyptus xerothermica valley.

**Air Photo** **Photo** 9 **on Roll** F6 **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 481606mE, 7725881mN 481589mE, 7725936mN 481580mE, 7725859mN

**Habitat** Lower hill slope of upper hills, facing south-west, which terminates in a wide rocky plateau. Grassed area of slope is narrow between rockpiles on ridge therefore sample area had to be fitted into an appropriate area.

**Soil** Skeletal red-brown silty loam with small rocks, stones 10-20 cm diameter.

#### Rock Type

**Vegetation** Ipomoea costata, Acacia bivenosa scattered shrubs over Acacia elachantha scattered low shrubs over Themeda sp. Burrup (B84), Triodia epactia (Burrup form) closed tussock/hummock grassland.

**Veg Condition** Excellent.

**Fire Age** Not obvious.

## Burrup Peninsula Site B232

**Described by** VLL **Date** 27/06/00

**Location** Rockpile adjacent to B231.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50 481580mE, 7725859mN 481579mE, 7725964mN

**Habitat** South-west facing high rocky slope - south side of E. xerothermica valley and adjacent to B231, Themeda sp. Burrup (B84) grassland corridor.

**Soil** Skeletal

**Rock Type** Large block type, fine grained, grey inside, weathering rough red outside with stripes of quartz like material.

**Vegetation** Eucalyptus xerothermica, Brachychiton acuminatus low scattered trees over Acacia coriacea subsp. coriacea, Rhagodia preissii subsp. obovata, Scaevola spinescens (narrow form), Flueggea virosa subsp. melanthesoides, Abutilon aff. dioicum (HD72-14) shrubland over Triodia angusta (Burrup form), (Triodia epactia (Burrup form)) open hummock grassland.

**Veg Condition** Excellent.

**Fire Age** Not obvious.

**Notes** Shrubs and woodland in rock pockets, one patch of soil in larger pocket with Triodia angusta (Burrup form) (also occurred among rocks).

### Rock Pile Notes

Triodia epactia (Burrup Form)	+	<1 %	35 cm	

## Burrup Peninsula Site B233

**Described by** VLL **Date** 27/06/00

**Location** Plateau south of Eucalyptus xerothermica valley.

**Air Photo** **Photo** Y **on Roll** F6 **Video** N **E Photo**

**Photo Notes** Photos 10-16 of "wetland" and 14 of creek feeding it.

**AMG Zone** 50 481587mE, 7725762mN 481516mE, 7725770mN

**Habitat** Open flat wetland area occurs on a plateau in a slight basin. Plateau is broad with rounded boulders and large areas of flat rock outcrop. Wetland is open, flat with boulders, and areas with flat rock. See notes.

**Soil** Grey alluvial.

**Rock Type** Grey boulders, and flat rocks, plus lots of calcrete.

**Vegetation** Cyperus vaginatus, Schoenus falcatus, Fimbristylis rara, Schoenoplectus litoralis, Eragrostis sp. Mt Montagu (MET 15246) sedgland/tussock grassland with Stenodina grossa, Pluchea rubelliflora, Stylidium fluminense, Peplidium sp. E (Flora of Australia) herbland.

**Veg Condition** Excellent.

**Fire Age** N/A

**Notes** Wetland appears to be springfed and permanent. Upstream to the southeast it is fed by a creek through a rocky gully from the east. Part of this creek was relatively wide (2-3 m) and deep (50-60 cm) and had permanent weeds. The creek then disappears below ground further along to the east. Sample stays within wet areas, 20-30 m wide.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes

## Burrup Peninsula Site B234

**Described by** VLL **Date** 26/06/00

**Location** Western side of Eucalyptus xerothermica valley, northern side of track.  
**Air Photo** **Photo** 26 **on Roll** **Video** N **E Photo**  
**Photo Notes**  
**AMG Zone** 50 479687mE, 7724991mN 479629mE, 7725019mN  
**Habitat** Narrow plateau corridor bordered each side by drainage gullies and rocky hill slopes (corridor runs east west).  
**Soil** Pinky-red silty colluvial loam with stones 3-5 cm diameter.  
**Rock Type** Grey weathering red-brown, 3-5 cm diameter, blocky.  
**Vegetation** Grevillea pyramidalis subsp. pyramidalis, (Acacia bivenosa, Acacia elachantha) open heath over Tephrosia rosea var. clementii low open heath over Triodia epactia (Burrup form), Triodia angusta (Burrup form) hummock grassland.  
**Veg Condition** Excellent.  
**Fire Age** Not evident.  
**Notes** Plateau containing Grevillea pyramidalis subsp. pyramidalis is narrow (~20-25 m wide x 200 m long) before it slopes on either side into Triodia angusta (Burrup form) grassland and associated gullies.

**Rock Pile Notes****Species List:**

## Burrup Peninsula Site B236

**Described by** VLL **Date** 26/06/00

**Location** Southwest side of Eucalyptus xerothermica valley track.

**Air Photo** **Photo** 1 **on Roll** F7? **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 480157mE, 7725109mN 480201mE, 7724994mN

**Habitat** Gentle lower hill slope facing N-NE, densely grassed, with very scattered shrubs.

**Soil** Greyish brown sandy loam beneath mixed pale orange-pink softer sand-stony rock often mixed with quartz fragments

**Rock Type** Less frequently grey rhyadocite rocks, grey inside, red brown outside, 5-20 cm diameter.

**Vegetation** Corymbia hamersleyana scattered low trees over Acacia bivenosa, Acacia elachantha, Acacia orthocarpa scattered shrubs over Triodia wiseana (Burrup form) closed hummock grassland.

**Veg Condition** Excellent.

**Fire Age** Not evident.

**Notes** Triodia wiseana (Burrup form) is one which I've always found confusing although from Triodia epactia (Burrup form) description it can be hairy at nodes as this specimen is (it doesn't seem hairy enough for T. wiseana (Burrup form), and hummocks are too "loose" but more compact than T. epactia (Burrup form) - glumes not T. wiseana (Burrup form)). The area with this Triodia is distinct from T. epactia (typical one) around it, being more dense, more abundant culms and more pale green in colour.

## Burrup Peninsula Site B238

**Described by** VLL **Date** 26/06/00

**Location** Rockpiles SE of Jump-up, south facing.

**Air Photo** **Photo** 4 **on Roll** **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 479172mE, 7725247mN 479163mE, 7725237mN 479174mE, 7725271mN

**Habitat** South facing rockpile; relatively sheltered from sun and prevailing winds, steep, small rocks, getting larger towards the top and some vertical outcropping toward the top.

**Soil** Skeletal, in soil pockets.

**Rock Type** Small-medium jointed rhyadocite - fine grained grey inside, weathering smooth red-brown outside.

**Vegetation** Eucalyptus victrix, Brachychiton acuminatus scattered low trees over Flueggea virosa subsp. melanthesoides, Acacia coriacea subsp. coriacea, Rhagodia preissii subsp. obovata, Dichrostachys spicata, Ehretia saligna var. saligna scattered shrubs to open shrubland over Acacia elachantha scattered low shrubs over Triodia epactia (Burrup form) scattered hummock grasses to very open hummock grassland with Dicliptera armata scattered herbs.

**Veg Condition** Excellent.

**Fire Age** Not evident.

**Notes** Sample includes vegetation on base of rockpile (B) as well as on rockpile proper (R).

Below is the base of the rockpile species :

Cleome viscosa	25 cm	+	<1 %	B	
Indigofera monophylla (Burrup form)	35 cm	+	<1 %		B
Abutilon lepidioicum	30 cm	+	<1 %	B	
Triumfetta clementii	25 cm	+	<1 %		B
Euphorbia tannensis subsp. eremophila (Burrup form)	35 cm	+	<1 %		B238-4 B
Commicarpus australis		+	<1 %		Vine. B.
Indigofera trita				B

### Burrup Peninsula Site B239a

**Described by** VLL      **Date** 26/06/01      50x50

**Location** East of jump-up.

**Air Photo**      **Photo** #5,6      **on Roll**      **Video** N E **Photo**

#### Photo Notes

**AMG Zone** 50 479239mE, 7725079mN 479239mE, 7724964mN

**Habitat** Coastal plateau beneath rocky ridges and mangrove lined saline flat and tidal creeks - species recorded from *Triodia epactia* community associated with lower slopes.

**Soil** Pale medium red brown fine rained loam with scattered stony mantle.

**Rock Type** small rocks to 15cm diameter, fine-medium grained grey weathering smooth red.

**Vegetation** *Acacia bivenosa* open shrubland over *Triodia epactia* (Burrup form) hummock grassland and mixed herbland.

**Veg Condition** Excellent

**Fire Age** Not obvious

**Notes** Coastal plateau fringed on two sides by saline flats and tidal creek. NB: this sample is probably not 100% "clean" in that the quadrat stretched over *T. angusta* (Burrup form) (bordering saline flats as it does) and extended into *T. epactia* (Burrup form) associated more with lower slopes. Sampled vegetation in *T. angusta* (Burrup form), therefore is marked TA in case these need to be treated separately.

## Dolphin Island quadrats

### Dolphin Island Site D086

**Described by** MET **Date** 29/05/00

**Location** West side of Dolphin Island, near camp area.

**Air Photo** **Photo** 20 **on Roll** MB **Video** Y **E Photo** 176, 177

#### Photo Notes

**AMG Zone** 50 481665mE, 7732856mN 481719mE, 7732921mN 481706mE, 7732929mN 481656mE, 7732872mN

**Habitat** Gentle slope between two small ridges of rocks, from low crest running to southerly direction.

**Soil** Pebbly gravelly brown loam amongst cobbles and small boulders. Surface mostly large pebbles to cobbles, some small boulders.

**Rock Type** Medium grained grey volcanic.

**Vegetation** *Grevillea pyramidalis* subsp. *pyramidalis* scattered shrubs over *Indigofera monophylla* (Burrup form), *Chorchorus walcottii* low shrubland over *Triodia epactia* (Burrup Form) hummock grassland to closed hummock grassland.

**Veg Condition** Excellent.

**Fire Age** >10 years.

**Notes** All the *Abutilon lepidum* seen was juvenile, the habitat is too harsh (exposed) and the species is unlikely to establish. There was only one plant of the *Scaevola spinescens* (narrow form).

#### Rock Pile Notes

### Dolphin Island Site D087

**Described by** MET **Date** 29/05/00

**Location** West side of Dolphin Island, near camp area, adjacent to D086.

**Air Photo** **Photo** 19 **on Roll** M2 **Video** N **E Photo** 177, 178

#### Photo Notes

**AMG Zone** 50 481723mE, 7732901mN 481702mE, 7732862mN

**Habitat** Rock pile

**Soil** Orange brown loamy fine sand between cobbles and boulders.

**Rock Type** Medium grained, dark grey, volcanic.

**Vegetation** *Brachychiton acuminatus*, *Ehretia saligna* var. *saligna* scattered low trees over *Rhagodia eremaea*, *Terminalia supranitifolia*, *Acacia coriacea* subsp. *coriacea* scattered tall shrubs over *Scaevola spinescens* (narrow form) scattered shrubs.

**Veg Condition** Excellent

**Fire Age** >10 years

**Notes** Both sides and over rock pile for 50 m length (peg 1-2) recorded. Very little *Rhynchosia* sp. Burrup (82-1C) (3+ plants, all small at lower edge). Several juvenile *Brachychiton acuminatus*. Rock wallaby observed at 4 m distance; was chewing white ant "run way" material off a dead branch.

**Rock Pile Notes** Very little soil cover except along lower edge; <1%. Rocks angular, mostly small to medium sized boulders some cobbles (more in patches).

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Acacia coriacea</i> subsp. <i>coriacea</i>	<1	<1 %	2 m		
	<i>Alectryon oleifolius</i>	+	<1 %	1.2-1.7 m		
	<i>Brachychiton acuminatus</i>	>=1	1-5%	(0.1) 3-4+		
	<i>Cleome viscosa</i>	+	<1 %	45 cm		Only at edge. Within
	<i>Ehretia saligna</i> var. <i>saligna</i>	+	<1 %	4 m

	<i>Flueggea virosa</i> subsp. <i>melanthesoides</i>	+	<1 %	1-3.5 m		
	<i>Grevillea pyramidalis</i> subsp. <i>pyramidalis</i>	+	<1 %	1 m		Only at edge
	<i>Indigofera monophylla</i> (Burrup form)	+	<1 %	70 cm		Only at edge. Within
	<i>Mukia maderaspatana</i>	+	<1 %	15-30 cm	D87-1	Only at edge. Within
	<i>Paspalidium tabulatum</i> (Burrup Form)	+	<1 %	7 cm		Grazed
	<i>Pterocaulon sphacelatum</i>	+	<1 %	25-70 cm		=D86
	<i>Rhagodia eremaea</i>	<1	<1 %	2-2.6 m		
	<i>Rhynchosia</i> sp. Burrup (82-1C)	+	<1 %	20 cm	D87-3	Green, sticky. Amongst
	<i>Scaevola spinescens</i> (narrow form)	<1	<1 %	0.5-1.6 m		=D86
	<i>Solanum horridum</i>	+	<1 %	2 cm	D87-2	Yellowish, juvenile
	<i>Terminalia supranitifolia</i>	+/-1	<1 %	(0.3)		
	<i>Tinospora smilacina</i>	+	<1 %	35 cm		
	<i>Trichodesma zeylanicum</i> var. <i>zeylanicum</i>	+	<1 %	65 cm		Amongst cobbles near
	<i>Triodia epactia</i> (Burrup Form)	+	<1 %	50 cm		=D86
	<i>Triumfetta appendiculata</i> (Burrup Form)	+	<1 %	20 cm		Only at edge
	<i>Triumfetta clementii</i>	+	<1 %	15 cm		Only at edge

#### Dolphin Island Site D088

**Described by** MET **Date** 29/05/00

**Location** West side of Dolphin Island.

**Air Photo** **Photo** 18 **on Roll** MB **Video** Y **E Photo** 180, 181

#### Photo Notes

**AMG Zone** 50 481941mE, 7732874mN 481957mE, 7732849mN 482018mE, 7732886mN 482008mE, 7732905mN

**Habitat** Narrow, fairly flat bottomed valley between a ridge with rock piles (to the west) and a large cliff and boulder scree slope. Low in landscape - upper end of tidal zone nearby.

**Soil** Brown loamy fine sand, cobbly pebbly in places.

**Rock Type** N/R

**Vegetation** *Eucalyptus victrix* low woodland to low open woodland (patchy) over *Triodia angusta* (Burrup form), (*Triodia epactia* (Burrup form)) hummock grassland.

**Veg Condition** Excellent

**Fire Age** >10 years.

**Notes** Habitat continued - has narrow (1-2 m) flow channel in places and wash area with *Ammania baccifera* in others. In one patch (dryer and open) *Triodia epactia* (Burrup form) replaces *T. angusta* (Burrup form).  
2-300 m upstream this unit narrows into the flowline and its edges (where valley does not have a flat floor) and next to it there is vegetation +/- = D86 (sometimes without *Indigofera monophylla* (Burrup form)).

#### Photo Notes

**AMG Zone** 50 482038mE, 7732866mN

**Habitat** Large boulder rock pile, trends N-S.

**Soil** Light brown loamy fine to medium sand.

**Rock Type** Dark grey, fine to medium grained; ?volcanic.

**Vegetation** Ehretia saligna var. saligna, Brachychiton acuminatus scattered low trees over Ficus platypoda var. D scattered, Flueggea virosa subsp. melanthesoides scattered tall shrubs over Rhagodia eremaea, Scaevola spinescens (narrow form) scattered shrubs.

**Veg Condition** Excellent

**Fire Age** >10 years

**Notes** Area above pegs 2+3 of D88 recorded. Over rock pile, including lower western and eastern edges. 'Swale' slope east of D89+/- D86 but with no Grevillea and some Cajanus.

**Rock Pile Notes** Steep +/- west facing slope, quite high (>50 m). Mostly medium to large boulders, some areas with cobble infill.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

**Dolphin Island Site D094**

**Described by** VLL **Date** 29/05/00

**Location** Midway along west coast of Dolphin Island, just E of small mangrove bay.

**Air Photo** **Photo** 21, **on Roll** 22: **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 482495mE, 7734876mN 482503mE, 7734822mN

**Habitat** Coastal rock outcrops spilling down onto beach, W facing, relatively sheltered from easterlies. Large block-rock outcrops with narrow corridors of Triodia epactia (Burrup form) beneath.

**Soil** Red-brown skeletal, but some soil pockets.

**Rock Type** Red-brown fine grain block type medium-jointed rhyadocite - some platey rock.

**Vegetation** Brachychiton acuminatus, (Terminalia canescens) low woodland over Flueggea virosa subsp. melanthesoides open shrubland over Corchorus walcottii low open shrubland over Triodia epactia (Burrup form) open hummock grassland.

**Veg Condition** Excellent - no weeds.

**Fire Age** N/A

**Notes** Transect runs 50 m along base of rockpiles. Rockpiles are low, coastal, spilling down on to the beach. Narrow corridors of *Triodia epactia* (Burrup form) grow beneath rocks. Relatively dense *Brachychiton acuminatus* 30-40%.  
Rockwallaby!

### Dolphin Island Site D095

**Described by** VLL **Date** 29/05/00 **100x2-3m**

**Location** Midway along west coast of Dolphin Island, E of small mangrove bay.

**Air Photo** **Photo** 25 **on Roll** from **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 482539mE, 7734661mN 482601mE, 7734725mN

**Habitat** Shallow drainage gully running E-W on to beach. Sample taken along coastal plateau (D101).  
Very gentle slope, draining from high slopes to E and S.

#### Soil

**Rock Type** Grey, red-grey cobbles, pebbles and larger rocks to 25 cm diameter.

**Vegetation** *Eucalyptus victrix*, *Terminalia canescens* low woodland over *Dichrostachys spicata*, *Scaevola spinescens* (narrow form) scattered shrubs over *Cyperus vaginatus*, *Cyperus bifax*, *Triodia epactia* (Burrup form) sedgeland/hummock grassland.

**Veg Condition** Excellent - No weeds.

**Fire Age** N/A

**Notes** Very dense Sedge and *Triodia epactia* (Burrup form) cover beneath *Eucalyptus victrix*/*Terminalia canescens*.  
Transect kept within flowline 2-3 m x 100 m. Water in shallow pools x3 along transect. Drain flows E-W from higher rocky slopes (not in this sample) through coastal plateau (this sample).

**Rock Pile Notes** See D101.

## Dolphin Island Site D099

**Described by** ASW **Date** 29/05/00

**Location** Further E of D098 on crushed coral.

**Air Photo** **Photo** 11A **on Roll** AS **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 485464mE, 7731225mN 485485mE, 7731203mN 485489mE, 7731212mN 485474mE, 7731214mN

**Habitat** Flat +/-level shell sand with a few scattered rocks, gravel and small boulders.

**Soil** Dark brown sand, organic matter, with lots of shell/coral pieces. Surface covered with shell/coral litter. 10% coral/shell 90%.

**Rock Type** Outcropping coral. Cobbles/stones - see notes.

**Vegetation** *Acacia coriacea* subsp. *coriacea*, *Terminalia supranitifolia*, (*Brachychiton acuminatus*, *Ehretia saligna* var. *saligna*) low woodland over *Pittosporum phylliraeoides* var. *phyllirae* high open shrubland over *Rhagodia preissii* subsp. *obovata*, *Scaevola spinescens* (narrow form), *Adriana tomentosa* open shrubland with *Tinospora smilacina* very open lianes.

**Veg Condition** Very good (a few weeds).

**Fire Age** 1995?

**Notes** Cobbles/stones of (1) light quartz rock with medium grain light blue/grey interior, (2) reddish/rusty rock with medium grain dark grey interior, (3) similar to (1) but with green feldspar(?).

See also photos 12A, 13A 14A for ridge rockpile *Triodia* vegetation.

Two almost verging pockets of rockpile type vegetation:

## Dolphin Island Site D101

**Described by** VLL      **Date** 29/05/00

**Location** Midway along west coast of Dolphin Island (parallel to D95).

**Photo Notes**

**AMG Zone** 50 482714mE, 7734659mN 482761mE, 7734634mN 482715mE, 7734625mN 482737mE, 7734649mN

**Habitat** Gently sloping "terrace", stony with small rock outcrops 1.5 x 1.0 m, mid-level between drop into deep gully to NW and rockpile ridge SE - west facing ridge (exposed to westerlies).

**Soil** Red-brown, sandy.

**Rock Type** Rocks varying beneath 10-50 cm diameter, fire ground grey-red Rhyadocote.

**Vegetation** Acacia pyrifolia (slender, white) high shrubland over Triodia epactia (Burrup form) closed hummock grassland.

**Veg Condition** Excellent - no weeds.

**Fire Age** N/A

**Notes** Relatively dense Acacia pyrifolia (slender, white) within 3 m from base of rock ridge - included in quadrat.

**Rock Pile Notes****Species List:**

**Dolphin Island Site D103**

**Described by** VLL **Date** 29/05/00

**Location** Midway along west coast of Dolphin Island (south of small mangrove bay).

**Air Photo** **Photo** 26 **on Roll** F1 **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 482571mE, 7734563mN 482504mE, 7734559mN 482529mE, 7734536mN 482560mE, 7734592mN

**Habitat** High rock pile, medium sized rocks (not vertical, not platy, more rounded chunks), westward facing slope.

**Soil** None on rock pile itself, but small pockets beneath of skeletal red-brown sandy soil.

**Rock Type** Red-brown fine grained rhyadocite.  
**Vegetation** Brachychiton acuminata, Terminalia canescens low open woodland over Pittosporum phylliraeoides var. phylliraeoides, Acacia coriacea subsp. coriacea open shrubland over Triodia epactia (Burrup form) scattered grasses.

**Veg Condition** Excellent - no weeds.

**Fire Age** N/A

**Notes** Sample is 50 m along top of rock pile ~70 m down to base.

## Dolphin Island Site D109

**Described by** MET **Date** 30/05/00

**Location** West side of Dolphin Island.

**Air Photo** **Photo** 15 **on Roll** M2 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 482310mE, 7733130mN 482437mE, 7733194mN

**Habitat** Small creekline in a gully with steep, mostly rocky slopes next to sides, slopes with *Eucalyptus victrix* included and creek bed.

**Soil** Dark brown loam amongst pebbles and cobbles (on slope), bed.

**Rock Type** N/R cobbley.

**Vegetation** *Eucalyptus victrix* low woodland over *Brachychiton accuminatus* scattered low trees over *Acacia coriacea* subsp. *coriacea*, *Fluggia virosa* subsp. *melanthesoides* high open shrubland over *Rhagodia eremaea*, *Scaevola spinescens* (narrow form) scattered shrubs over *Triodia epactia* (Burrup Form) very open hummock grassland with *Dicliptera armata* annual herbland and *Trichosanthes cucumerina* scattered lianes.

**Veg Condition** Excellent.

**Fire Age** >10 years (but charcoal on an old stump).

**Notes** Peg 1 near base of an *Eucalyptus victrix* on S side of creekbed. Recorded the creek bed and the slopes with *E. victrix*, avoiding the base of the rockpiles (excluded area with *Brachychiton*). Dried out now but bed has temporary pool. *Cyperus vaginatus* the only species recorded only from the creek bed. Some area where *Dicliptera armata* is absent are either bare, small patches of *Triodia* or small patches of *Paspalidium tabulatum*.

No *Triodia angusta* seen.

Preumably the abundant *D. armata* is due to the seepabe from the adjoining slopes.

Peg 2 is in a split boulder ca 2 m N of creek bed. Due to short time length not measured, adequate for species list though.

## Dolphin Island Site D111

**Described by** MET      **Date** 30/05/00

**Location** Next to pearl farm yard.

**Air Photo**      **Photo** 13      **on Roll** MB **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 484384mE, 7738658mN 484427mE, 7738638mN 484394mE, 7738668mN 484444mE, 7738672mN

**Habitat** Low dune of calcareous sand, pale brown, and shell grit.

### Soil

### Rock Type

**Vegetation** *Acacia bivenosa* shrubland to high shrubland over *Adriana tomentosa*, *Rhagodia eremaea* shrubland over *Paspalidium tabulatum* (Burrup Form) scattered tussock grasses.

**Veg Condition** Good - very good. Possibly better, but hard to tell.

**Fire Age** >10 years.

**Notes** At inland edge grades int vegetation dominated by *Triodia*. Plot size and shape selected to fit the small area of the unit present.

Peg 5 coordinates: 50K-04-84-440  
UTM-77-38-640

### Dolphin Island Site D112

**Described by** MET **Date** 30/05/00

#### Location

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

#### Photo Notes

**AMG Zone** 50

**Habitat** Small flat area above steeply sloping beach.

**Soil** Coarse sand of (surface) shellgrit, pale brown with white.

**Rock Type** N/R

**Vegetation** Swainsona formosa very open annual herbland.

#### Veg Condition

#### Fire Age

**Notes** Probably subject to storm surge and very high tides.  
Not pegged, adjacent to D111.

#### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Amaranthus sp.	+	<1 %	7 cm		=D111
	Cleome viscosa	+	<1 %	15 cm		
	Euphorbia tannensis subsp. eremophila (Burrup form)	+	<1 %	6 cm		=D111

### Dolphin Island Site D114

**Described by** ASW **Date** 30/05/00

**Location** Rockpile adjacent to D115 creek bed (SE).

**Air Photo** **Photo** **Y** **on Roll** **AS** **Video** **N** **E Photo**

**Photo Notes** 19A, 20A (Gymnanthera).

**AMG Zone** 50 481961mE, 7733384mN 482023mE, 7733414mN

**Habitat** Steep to very steep boulder slopes (rockpile) on each side of ridge.

**Soil** Gritty red loam, loose in crevices.

**Rock Type** Weathered platey formation, coarse grain. Fine grain angular-subangular. Cover >90%.

**Vegetation** Terminalia canescens, Brachychiton acuminatus, Ehretia saligna var saligna scattered low trees over Flueggea virosa subsp. melanthesoides, Acacia coriacea subsp. coriacea, Jasminum didymum subsp. lineare scattered shrubs over Rhagodia eremaea scattered low shrubs over Triodia epactia (Burrup form), Cymbopogon ambiguus scattered hummock/tussock grasses.

**Veg Condition** Excellent.

#### Fire Age

**Notes** Patch of Triodia epactia (Burrup form) on top, surrounded by slopes, yet not a rockpile pocket. Gymnanthera cunninghamii shrubs and some other species in the 'ecotone' but not patches proper.  
Three pockets of vegetation, otherwise plants occur mainly as individuals.

**Rock Pile Notes** Entire rockpile sampled (both sides).

**Species List:**

### Dolphin Island Site D116

**Described by** ASW **Date** 30/05/00

**Location** N end of Island on second ridge NE of pearl farm shed.

**Air Photo** **Photo** 24A **on Roll** AS **Video** N **E Photo**

**Photo Notes** Photo from W of pocket.

**AMG Zone** 50 484758mE, 7738485mN 484791mE, 7738464mN

**Habitat** Dense patch of vegetation on rockpile N of E of pearl farm building.

**Soil** Loose brown loam where present.

**Rock Type** Medium grain, white and grey flecks. Surface rusty red, pale when scratched. Cover >90%

**Vegetation** *Brachychiton acuminatus* low open woodland over *Alectryon oleifolius*, *Rhagodia eremaea* open shrubland.

**Veg Condition** Excellent.

**Fire Age**

**Notes** The rockpile vegetation on this part of the Island seems to be species poor. Most is *Brachychiton acuminatus*, with few other species. *Flueggia virosa* subsp. *melanthesiodes* is on a few. There are a few *Pittosporum phylliraeoides* var. *phylliraeoides* several hundred metres due E.

**Rock Pile Notes**

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen Notes
	<i>Alectryon oleifolius</i>	<5%	1-5%	80 cm	
	<i>Brachychiton acuminatus</i>	10-15%	10-25%	4 m?	
	<i>Rhagodia eremaea</i>	+	<1 %	1 m	
	<i>Trichosanthes cucumerina</i>	+	<1 %	4 m?	

### Dolphin Island Site D117

**Described by** ASW **Date** 30/05/00

**Location** NE of D116, on slope below. Along line travelling N between GPS points and including all rockpile behind to E and S.

**Air Photo** **Photo** 21 **on Roll** MH **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 484792mE, 7738481mN 484804mE, 7738491mN

**Habitat** Steep to very steep rocky slope and vegetated terrace.

**Soil** Thin, coarse brown loam. Lots of organic matter.

**Rock Type** Coarse grain light blue/grey with quartz crystals. >60% surface cover.

**Vegetation** *Brachychiton acuminatus*, *Terminalia supranitifolia* low woodland over *Flueggia virosa* ssp.

melanthesoides, *Phyllanthus ciccoides* high shrubland over *Rhagodia eremaea* open shrubland.

**Veg Condition** Good - very good.

**Fire Age**

**Notes**

## Dolphin Island Site D124

**Described by** VLL **Date** 30/05/00

**Location** Very steep coastal rockpile slopes adjacent to pearl farm (N end pearl farm area).

**Air Photo** **Photo** 13 **on Roll** F2 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 484938mE, 7739150mN

**Habitat** Steep coastal slopes down to cobble shoreline. Slope is densely Triodia covered, beneath very large quartz-like (with mica) block-rocks to 1.5-2 m across. Walls and outcrops of conglomerate rock - most of the slope is composed of conglomerate rock.

**Soil** Mostly conglomerate rock and eroded conglomerate rock.

**Rock Type** Quartz-like (with mica) blocks 1.5-2 m diameter, coarse grained, and smaller rocks 25-30 cm. Outcrops of coastal conglomerate.

**Vegetation** *Ficus opposita* var. *indecora*, *Cajanus cinereus*, *Ipomoea costata* low open shrubland over *Triodia angusta* (Burrup form) closed hummock grassland.

**Veg Condition** Excellent - no weeds.

**Fire Age** N/A

**Notes** Triodia is 100% dense on conglomerate material; spilling down beneath conglomerate are narrow corridors of red coarse-grained rock - no vegetation on these.

**Rock Pile Notes** Conglomerate rock makes up most of slope, beneath scattered 'block rock'.

## Dolphin Island Site D125

**Described by** VLL **Date** 30/05/00

**Location** Toward the N end of Dolphin Island, adjacent to the N end of the prawn(?) farm.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

### Photo Notes

**AMG Zone** 50

**Habitat** Very rough grained red rock piles, large rocks, above conglomerate rock strips of D124.

### Soil

**Rock Type** Large-jointed very rough coarse grained red rock.

**Vegetation** *Brachychiton acuminatus*, *Pittosporum phylliraeoides* var. *phylliraeoides* high shrubland over *Scaevola spinescens* (narrow form), *Ipomoea costata* scattered low shrubs.

**Veg Condition** Excellent, no weeds.

**Fire Age** N/A

**Notes** Pocket woodland on large rocks.

## Gidley Island quadrats

### Gidley Island Site G130

**Described by** VLL **Date** 31/05/00

**Location** Towards the N end of Gidley Island, NW side.

**Air Photo** **Photo** Y **on Roll** F2 **Video** N **E Photo**

**Photo Notes** 22; 23 shows slope down to coastal plateau.

**AMG Zone** 50 479680mE, 7737882mN 479709mE, 7737959mN 479664mE, 7737908mN 479702mE, 7737976mN

**Habitat** Moderately steep coastal slope above coastal sands, Themeda sp. Burrup (B84) slope with granite rocks and boulders.

**Soil** Pale, pinky-brown sandy soil - some very coarse grained - and small pebbles.

**Rock Type**

**Vegetation** Ipomoea costata scattered shrubs over Themeda sp. Burrup (B84), Sorghum plumosum, Triodia angusta (Burrup form) tussock/hummock grassland with Goodenia microptera very open herbland.

**Veg Condition** Good - relatively frequent kapok.

**Fire Age** N/A

### Gidley Island Site G131

**Described by** VLL **Date** 31/05/00

**Location** Rockpile above Themeda triandra slope of G130 - NW side of Gidley Island towards N end.

**Air Photo** **Photo** 24 **on Roll** F2 **Video** N **E Photo**

**Photo Notes**

**AMG Zone** 50 479660mE, 7737910mN 479664mE, 7737962mN

**Habitat** Rockpile above Themeda slope (G130), medium-jointed red-brown medium grained rocks, facing ENE and exposed to winds. Too far from beach (900 m) for much salt spray effect.

**Soil**

**Rock Type** Fine-medium grained red-brown, medium jointed blocks.`

**Vegetation** Ipomoea costata, Abutilon indicum var australiense, Pittosporum phylliraeoides var phylliraeoides, Flueggea virosa subsp. melanthesoides, Rhagodia preissii subsp. obovata open shrubland to shrubland over Themeda sp. Burrup (B84), Sorghum plumosum very open tussock grassland.

**Veg Condition** Very good, but kapok in soil pockets with vegetation.

**Fire Age** N/A

**Notes** Vegetation in soil pockets dense - dense tall (1-1.25 m) Abutilon indicum - also dense Ipomoea costata.

**Rock Pile Notes**

**Species List:**

## Gidley Island Site G136

Described by ASW Date 31/05/00

### Location

Air Photo Photo Y on Roll AS Video N E Photo

Photo Notes 14 (from Peg 1 towards Peg 2), 15, 16 (is over W side of Island).

AMG Zone 50 479874mE, 7736915mN 479941mE, 7736926mN 479902mE, 7736954mN 479920mE, 7736889mN

Habitat Rock saddle between two drainages, gentle slopes to N and S.

Soil Red, very clayey with gravel and aggregates.

Rock Type Some granite outcropping. Cobbles, gravel of very coarse grained rock with pink/red/grey interior. Cover ~80%, in places being pavement-like with little veg.

Vegetation Acacia orthocarpa low open shrubland over Triodia epactia (Burrup form), Themeda sp. Burrup (B84), Sorghum plumosum hummock/tussock grassland with Rhynchosia cf. minima very open lianes.

Veg Condition Excellent.

Fire Age

## Gidley Island Site G142

Described by MET Date 31/05/00

Location Near of centre of west coast of Gidley Island.

Air Photo Photo on Roll Video N E Photo 222, 3, 4

Photo Notes E photos; 223 - slope with Sorghum, 224 - Canavalia patch.

AMG Zone 50 481030mE, 7739344mN 481001mE, 7739382mN

- Habitat** Largr rockpile, faces bay +/- southerly.
- Soil**
- Rock Type** Medium grained grey, some white, volcanic/igneous.
- Vegetation** Pittosporum phylliraeoides var. phylliraeoides scattered low trees ove Flueggea virosa subsp. melanthesoides scattered tall shrubs over Rhagodia eremaea, Abutilon indicum var. australiense scattered shrubs over Triodia angusta (Burrup form), (Sorghum plumosum) very open hummock/tussock grassland with patches of Canavalia rosea lianes.
- Veg Condition** Excellent.
- Fire Age** >10 years.
- Notes** Sorghum half way up vegetation strip up face of rockpile (E photo 222). Valley between G142 and 143 has Sorghum plumosum and Triodia angusta (Burrup form). In places has Sarcostemma. Operculina aequisejala and Crotalaria novae-hollandae seen.
- Rock Pile Notes** Moderate to steep slope, southerly facing, boulders mostly large some medium, angular. Indigofera trita larger(?) common in vegetation patches. Large patches of Canavalia.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes

**Gidley Island Site G143**

- Described by** MET **Date** 31/05/00 **50 x 50 m**
- Location** Gidley Island, west side near centre.
- Air Photo** **Photo** 9 **on Roll** M1 **Video** N **E Photo**
- Photo Notes**
- AMG Zone** 50 481486mE, 7738873mN 481525mE, 7738849mN 481485mE, 7738813mN 481442mE, 7738850mN
- Habitat** West facing, moderately steep mid-upper slope. Some small areas of outcrop.
- Soil** Orange-brown loam, some grit, amongst cobbles. About 60% of surface cobbles, pebbles, some boulders.
- Rock Type** Medium grained, grey, volcanic/igneous.
- Vegetation** Themeda sp. Burrup (B84), Triodia epactia (Burrup form), Sorghum plumosum tussock/hummock grassland with Rhynchosia cf. minima very open lianes.

**Veg Condition** Excellent.

**Fire Age** >5 years, possibly >10 years.

**Notes** Sorghum may grow back from bases (some with dead bases) when rains close(?).  
Had to cut recording short to meet boat, may have missed a few small species.  
Ficus platypoda var. C ~300 m S of plot on rockpile. E-photos taken (No no.s)

## Hamersley Iron Rail Line quadrats

### Hamersley Iron Site HR201

**Described by** VLL **Date** 5/06/00

**Location** Hamersley Iron Access Tracks - where water pipe crosses beneath road near km 56 HI rail marker.

**Air Photo** **Photo** Y **on Roll** **Video** N **E Photo**

**Photo Notes** 12, 13 of rockpiles and Arthur's site, 14 site.

**AMG Zone** 50 495710mE, 7670306mN

#### Habitat

**Soil** Red-brown sandy.

**Rock Type** Block type dark brown-red, medium to fine grained, weathered coarse on outside.

**Vegetation** Terminalia canescens scattered low trees over Acacia coriacea subsp. coriacea, Clerodendrum tomentosum high open shrubland over Ptilotus obovatus var. obovatus scattered low shrubs over Paspalidium tabulatum (Whim Creek form), (Aristida nitidula, Triodia epactia ) scattered tussock/hummock grasses.

**Veg Condition** \*Cenchrus ciliaris and \*Kapok present.

#### Fire Age

**Notes** Total of 3 Terminalia canescens in plot (2 rockpiles).  
Photos: 12-14.

**Rock Pile Notes** Rockpiles are scattered over landscape (see photo 13).

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Acacia ancistrocarpa	< 2	1-5%	1 m		
	Acacia coriacea subsp. coriacea	2	1-5%	1.5 m	HR201-2

	Scaevola spinescens (narrow form)	+	<1 %	1 m		Bright green glabrous
	Terminalia canescens	2	1-5%	3 m		
	Terminalia supranitifolia	+ 2	1-5%		HR201-1	Only one on this
	Tinospora smilacina	+	<1 %			Vine
	Trichosanthes cucumerina	+	<1 %			Vine
	Triodia angusta	+	<1 %			Base only.
	Triodia epactia	+	<1 %	40 cm		
	Triumfetta maconochieana	+	<1 %	1 m	HR201-4	Base.

### Hamersley Iron Site HR202

**Described by** VLL **Date** 5/06/00

**Location** Hamersley Iron Railway Track, east side of railway line, near 61 km peg.

**Air Photo** **Photo** Y **on Roll** F4 **Video** N **E Photo**

**Photo Notes** Photo 15, 16.

**AMG Zone** 50 499037mE, 7667572mN

- Habitat** Rockpile high pyramid shaped (cone-shaped).  
**Soil** Red-brown silty loam.  
**Rock Type** Medium blocks of fine to medium grained, grey inside, weathering rough sandpaper like dark brown-red on outside.  
**Vegetation** Terminalia supranatifolia, Ehretia saligna var. saligna, Acacia coriacea subsp. coriacea scattered low trees to low open woodland over Dichrostachys spicata scattered shrubs over Melhania sp. Burrup, Scaevola spinescens (narrow form) scattered low shrubs over Paspalidium tabulatum, \*Cenchrus ciliaris scattered tussock grasses.  
**Veg Condition** \*Cenchrus ciliaris and \*Kapok both present, otherwise very good.  
**Fire Age** Within past 24 months to base of slope.  
**Notes** Fire age cont: and in some lower pockets.

Terminalia supranatifolia on darker rock, one Terminalia supranatifolia at base of rockpile has been scarred by fire. 10 individuals on slope.

**Rock Pile Notes** All rockpile sampled radiating from top of Peg 1 (top of highest point) to base.

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Abutilon fraseri	+	<1 %	30 cm	HR202-3

	Trichosanthes cucumerina	+	<1 %			Vine

**Hamersley Iron Site** HR203

**Described by** VLL **Date** 5/06/00

**Location** Hamersley Iron Railway, near 61 km peg, east side HI railway.

**Air Photo** HI Access **Photo** **on Roll** **Video** N E **Photo**

**Photo Notes**

**AMG Zone** 50 498897mE, 7667809mN

**Habitat** South facing rocky slope, rocks as per sample HR202, north facing slope noted in notes, but intensively sampled.

**Soil**

**Rock Type** As for HR202.

**Vegetation** Brachychiton acuminatus scattered low trees over Clerodendrum tomentosum, Acacia coriacea subsp. coriacea, Terminalia supranatifolia open shrubland over Rhagodia eremaea, Scaevola spinescens (narrow form) low open shrubland over Aristida nitidula, Paspalidium tabulatum, \*Cenchrus ciliaris very open tussock grassland.

**Veg Condition** Excellent, occasional \*Cenchrus ciliaris.

**Fire Age** See notes.

**Notes** Terminalia supranatifolia growing not only on bare rock outcrop and rocks, but also on Triodia slope. Tree itself on very small rockpiles no more than 1 x 1 m/2 x 1 m. Slope with Triodia does not appear to be burnt, well developed Triodia epactia and T. wiseana, no charcoal evident, no Corchorus etc (does occur where plain below is burnt). 3 individuals on rockpile, 8 on slope.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Abutilon fraseri	+	<1 %			As at 202.
	Abutilon lepidum	+	<1 %	45 cm		
	Acacia coriacea subsp. coriacea	3-5%	1-5%	1.5 m		
	Aristida nitidula	2-3%	1-5%	45 cm		As at HD

	Rhynchosia cf. minima	+	<1 %			Vine; grey green.
	Scaevola spinescens (narrow form)	3-5%	1-5%	1 m		Glabrous green
	Solanum lasiophyllum	+	<1 %	35 cm		
	Streptoglossa decurrens	+	<1 %	30 cm		
	Terminalia supranatifolia	<2	1-5%	1 m		On rocky slope
	Tinospora smilacina	+	<1 %			Vine
	Trichosanthes cucumerina	+	<1 %			Vine
	Triodia epactia	+	<1 %	30-35 cm		

## Harding Dam quadrats

### Harding Dam Site HD177

**Described by** ASW      **Date** 4/06/00

**Location** ~ 50 m south of Harding Dam carpark.

**Air Photo**                      **Photo** Y                      **on Roll** AS      **Video** N      **E Photo**

**Photo Notes** 00, from carpark; 0, ESE from summit.

**AMG Zone** 50 510771mE, 7679816mN 510704mE, 7679854mN

**Habitat** Moderately steep boulderly slopes of rockpile.

**Soil** (1) Brown silty clay associated with calcrete (2) Red brown sandy clay grading to clay downslope associated with outcrop.

**Rock Type** Very fine grained dark blue-grey stones, angular to subangular, weathered red-brown, calcrete present on summit. Patch of paler rock outcropping southeast side medium fine grain, platy, angular, some rounding. Coarse gravel and cobbles in veg patches.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Poor to good, weeds especially *Cenchrus ciliaris* and *Aerva javanica* prominent.

**Fire Age** N/A

**Notes** The plot is near the conical part of the ridge behind the line between the pegs down to about 6 m lower and down to dam on SW side, but excluding lower edge next to line.

#### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Acacia coriacea</i> subsp. <i>coriacea</i>	<1 %		3.5 m		Broad phyllodes, erect
	<i>Aerva javanica</i>	<1 %		50 cm

## Harding Dam Site HD180

**Described by** ASW **Date** 4/06/00

**Location** ~ 2 km SW of Cooyapooya homestead next to track to top of Tabletop Mountain, slope facing SE.

**Air Photo** **Photo** 3,4 **on Roll** AS **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 512095mE, 7673320mN 512145mE, 7673314mN

**Habitat** Steep north facing slope of small-medium boulders and isolated figs, and small pockets of vegetation.

**Soil** Where present, a shallow loose mix of weathered rock and organic matter. No soil to speak of.

**Rock Type** (1) Fine grained grey-blue rock, angular, covers most of slope (2) Very fine grained (hydrosilicate?) on slope, paler weathered, smoother, often rounded. Darker grey outcrops further upslope.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Very good to good, some Aerva javanica.

**Fire Age** N/A

**Notes** The figs are often (usually?) solitary or few without associated or other species.  
Iseilema sp. Excluded on bare rocky top. Fimbristylis sp. Excluded on bare rocky top. Polycarphaa holtzei Excluded on bare rocky top

### Rock Pile Notes

#### Species List:

## Harding Dam Site HD188

**Described by** VLL **Date** 4/06/00

**Location** Harding Dam - rockpiles southwest of the dam, ~500 m from carpark.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

**Photo Notes** ASW has photo of this site.

**AMG Zone** 50 510955mE, 7679788mN 510997mE, 7679756mN

**Habitat** Rockpiles (including Triodia pockets) southwest of dam, northwest facing slope, medium sized blocky boulders. See notes.

### Soil

**Rock Type** Coarse-grained pink-brown rock with black oxidization on surface.

**Vegetation** Ipomoea costata, Dichrostachys spicata, Eremophila longifolia open shrubland over Scaevola spinescens (narrow form), Rhagodia eremaea low open shrubland over Triodia angusta, Aristida nitidula very open hummock grassland.

### Veg Condition

**Fire Age** N/A

**Notes** Small pockets of soil have vegetation amongst the rockpiles, these were sampled but Triodia "corridors" ie, larger tracts of Triodia, were not.

### Rock Pile Notes

#### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes

### Harding Dam Site HD191

**Described by** VLL **Date** 4/06/00

**Location** Dark rocky slopes southwest of Harding Dam.

**Air Photo** **Photo** 8,9 **on Roll** F4 **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 510387mE, 7666105mN 510373mE, 7666059mN

**Habitat** East facing mid-level and higher rockpile slopes above *Triodia* line. Fine grained dark grey-brown rocks with coarse outer coating (sand-paper like), but largish pockets 2x3 m of soil + *Triodia* + taller woodland.

**Soil** Skeletal fine dark clay loam.

**Rock Type** Dark brown-grey blocky rocks, very fine grained on inside but with dark sandpaper-like texture on outside.

**Vegetation** *Terminalia canescens* low open woodland over *Rhagodia eremaea*, *Cassia oligophylla* open shrubland over *Triodia wiseana*, *Paspalidium tabulatum* (Whim Creek form) very open hummock/tussock grassland.

**Veg Condition** N/A

**Fire Age** Fire on lower slopes within past 12 months,

**Notes** Fire age cont: sampled area appears above fire - no burnt vegetation evident.  
Very little soil, very few species, slope faces east.

**Harding Dam Site HD208**

**Described by** ASW **Date** 5/06/00

**Location** North-east HI Railway.

**Air Photo** **Photo** **on Roll** **Video** **N** **E Photo**

**Photo Notes**

**AMG Zone** 50 498825mE, 7667711mN

**Habitat** Moderate to steep boulderly slopes.

**Soil** Where present, a thin brown sandy loam, lots of organic matter.

**Rock Type** Weathered dark brown, angular, medium-fine grained, even dark-blue grey inside.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Good - \*Cenchrus ciliaris is common to abundant in the understorey.

**Fire Age**

**Notes** Spinifex around rockpile (railway is on west side) is not recently burnt, but most of vegetation elsewhere was burnt in 1999 or 1998. Mainly *Triodia wiseana* and \*Cenchrus ciliaris, the substrata density and species composition appears similar to the Table Hill plot.

**Rock Pile Notes****Species List:**

### Harding Dam Site HD209

**Described by** ASW **Date** 5/06/00

**Location** Rockpile ~ 300 m east of railway cut before 61 km post.

**Air Photo** **Photo** 12 **on Roll** AS **Video** N **E Photo**

**Photo Notes** 12 looking E @ 90 degrees from near HD208.

**AMG Zone** 50 499186mE, 7667708mN

**Habitat** Moderately steep bouldery slope of rockpile.

**Soil** Red-brown sandy loam, with some silt, to red silty loam on south side.

**Rock Type** Medium fine grained light blue-grey, weathered dark red-brown, angular to subangular outcrops around it.

**Vegetation** Inadequate data recorded for a vegetation description to be compiled.

**Veg Condition** Very good to excellent.

**Fire Age** Before 1995?

**Notes** Recent fire has burnt surrounding vegetation to edge of rockpile.  
Excluding edges of vegetation, contiguous with bordering hummock grassland.

**Karratha Hill Site KH210****Described by** ASW **Date** 5/06/00

- Location** SE of new sewage treatment ponds, approx. 100-200 m. "Craig Steen Hill".
- Air Photo** **Photo** Y **on Roll** AS **Video** N **E Photo**
- Photo Notes** 16, looking 70 degrees from under 3-line transmission; 17 ,
- AMG Zone** 50
- Habitat** Near vertical vegetated cliff on south side of east-west ridge (wall-of-china type). Steep, vegetated, mainly *Triodia epactia* (Burrup form) slope on north side.
- Soil** Brown silty loam (see KH205).
- Rock Type** Outcrop: sedimentary layers, ?quartz dolomite. Angular and platy - ironstone?
- Vegetation** *Flueggea virosa* subsp. *melanthesoides*, *Ehretia saligna*, *Ficus platypoda*, *Acacia coriacea* subsp. *coriacea* scattered tall shrubs to low trees over *Rhagodia eremaea* scattered shrubs over \**Cenchrus ciliaris*, *Triodia epactia* (Burrup form), *Themeda* sp. Burrup (B84) tussock/hummock grassland.
- Veg Condition** Poor, much *Cenchrus ciliaris*, some \**Aerva javanica*.
- Fire Age** Probably 1996 period.
- Notes** The southern base of the outcrops cliff is angular, boulders with an upper band of \**Cenchrus ciliaris*, a mid-lower band of *Themeda* and \**C. ciliaris* and a lower band of *Triodia epactia* (Burrup form) and *Rhynchosia* sp. (usual).
- Rock Pile Notes** The rockpile/outcrop plot begins at the base of the cliff above the scree slope, uphill from the uphill edge of Vicki's plot.

## Whim Creek quadrats

### Whim Creek Site W138

**Described by** ASW      **Date** 1/06/00

**Location** 50 degrees to microwave tower to NE of peg.

**Air Photo**                      **Photo**    Y                      **on Roll**    AS    **Video**    N    **E Photo**

**Photo Notes** 20, from near car/fence; 21; 22 (from Peg 1, looking SW).

**AMG Zone** 50 593519mE, 7694375mN 593485mE, 7694323mN

**Habitat** Lower, rocky mid-steep to steep N facing slope, hummock grassland.

**Soil** Fine red clay with aggregates and gravel.

**Rock Type** Cobbles cover >90% of the surface. Some outcropping ~1%. All very hard fine grained rock, grey inside and weathered red outside. Some quartz evident

**Vegetation** Acacia orthocarpa open shrubland over Indigofera monophylla (Burrup form), Indigostrum parviflorum (Whim Creek form; W138-3) scattered low shrubs to low open shrubland over Triodia epactia hummock grassland with Rhynchosia cf. minima lianes.

**Veg Condition** Very good (-E)

**Fire Age** Probably 1994-7 period, at least partially burnt.

**Notes**

**Rock Pile Notes**

**Species List:**

Quad	Name	Cover	C Class	Height	Specimen	Notes
	Acacia orthocarpa	1-<2	1-5%	<1-1.5 m	W138-1	
	Bonamia media var. villosa	+/-1	<1 %	5-10 cm	W138-8,4	{Recorded twice}
	Cleome viscosa	+	<1 %	15 cm		
	Corchorus laniflorus	+	<1 %	20 cm		usual, see Vicki
	Gomphrena cunninghamii	+/-1	<1 %	15 cm		+/- dead
	Indigostrum parviflorum (Whim Creek form; W138-3)	+/-1	<1 %	50 cm	W138-3,9	orange flowers, mostly
	Indigofera monophylla (Burrup form)	1-2	1-5%	60 cm		
	Rhynchosia cf. minima	50	33.3-50%	60 cm	W138-2	
	Sida cardiophylla	+	<1 %	60 cm	W138-5	
	Triodia epactia	60	50-75%	30-50 cm	W138-6	
	Triodia wiseana	1-2	1-5%	60 cm	W138-7	

### Whim Creek Site W139

**Described by** ASW      **Date** 1/06/00

**Location** Upslope to SE of W138 on rockpile above Triodia patch

**Air Photo**                      **Photo**    Y                      **on Roll**    AS    **Video**    N    **E Photo**

**Photo Notes** 20 (from a distance), 23 (from near Peg 1).

**AMG Zone** 50 593612mE, 7694243mN 593654mE, 7694191mN 593659mE, 7694236mN 593603mE, 7694194mN

**Habitat** Boulder jumble with clumps, rather than patches, of vegetation. Moderately to very steep slope.

**Soil** Must be some somewhere! A few pockets of red-brown clay to loamy clay.

**Rock Type** Rockpile - boulders fine grained grey to grey/blue. Very hard.

**Vegetation** Terminalia canescens, Ehretia saligna var. saligna low woodland over Carissa lanceolata high open shrubland over Jasminum didymum subsp. lineare, Scaevola spinescens (narrow form), Gossypium australe (Whim Creek form) open shrubland over Aristida nitidula open grassland.

**Veg Condition** Very good to excellent.

**Fire Age** Long?

**Notes**

**Rock Pile Notes**

**Species List:**

<i>Trichosanthes cucumerina</i>	+	<1 %	1.5 m		

## Whim Creek Site W144

**Described by** MET **Date** 1/06/00

**Location** South of highway, east of Whim Creek.

**Air Photo** **Photo** 8 **on Roll** M2 **Video** N **E Photo** 232-3,36-

### Photo Notes

**AMG Zone** 50 593252mE, 7694353mN 593206mE, 7694331mN

**Habitat** Steep boulder scree, faces N and NNW.

**Soil** Red-brown clayey loam.

**Rock Type** Mostly fine grained grey, some with quartz inclusions.

**Vegetation** *Terminalia canescens*, *Ehretia saligna* var. *saligna*, *Ventilago viminalis* low open woodland to high open shrubland over *Flueggea virosa* subsp. *melanthesoides* scattered tall shrubs over *Gossypium australe* (Whim Creek form), *Scaevola spinescens* (narrow form) scattered shrubs over *Aristida nitidula* open tussock grassland.

**Veg Condition** Excellent.

**Fire Age** >5 years?>10 years.

**Notes** *Gossypium australe* (Whim Creek form) common along lower edge but only occasional along rockpile, except for one patch with a number of individuals in the site. The *Aristida nitidula* is common along the rockpile and along the lower edge. The nearby slopes and lower edge have possibly been burnt more recently.

**Rock Pile Notes** Fairly steep slope, boulders mostly angular and medium sized near Peg 1, but areas with large boulders and some outcrop over the rest of the plot. About 10% soil surface.

### Species List:

Quad	Name	Cover	C Class	Height	Specimen	Notes
	<i>Acacia orthocarpa</i>	+	<1 %	1.3	W144-16	Only along lower edge
	<i>Aristida nitidula</i>	>5	5-10%	50-90 cm	W144-1

## Whim Creek Site W145

**Described by** MET **Date** 1/06/00

**Location** East of Whim Creek, south of highway.

**Air Photo** **Photo** 7 **on Roll** MB **Video** N **E Photo** 229,30,31

### Photo Notes

**AMG Zone** 50 593575mE, 7694018mN 593567mE, 7693967mN

**Habitat** Boulder rockpile on crest of a large hill.

**Soil** Orange-brown loam amongst cobbles.

**Rock Type** Grey, fine grained volcanic igneous.

**Vegetation** *Terminalia canescens*, *Ehretia saligna* var. *saligna* scattered low trees over *Carissa lanceolata* scattered shrubs over *Aristida nitidula* scattered tussock grasses with *Tinospora smilacina*, *Trichosanthes cucumerina* scattered lianes.

**Veg Condition** Excellent.

**Fire Age** >10 years.

**Notes** Crest has a cobbly soil patch with a clump of *Carissa lanceolata*. Annuals such as *Polycarphaea*, *Sporobolus*, *Cleome* and *Aizoaceae* in this.

## Whim Creek Site W146

**Described by** MET **Date** 1/06/00

**Location** ? Km west of Whim Creek and just south of highway next to Sherwood river(?)

**Air Photo** **Photo** 6 **on Roll** MB **Video** N **E Photo**

### Photo Notes

**AMG Zone** 50 563086mE, 7683096mN 563127mE, 7683125mN

**Habitat** Boulder rockpile/scree, east facing.

**Soil** Light brown loam amongst cobbles and boulders.

**Rock Type** Medium grained grey/white (mafic and feldspars) volcanic/igneous.

**Vegetation** *Terminalia canescens*, *Ehretia saligna* scattered low trees over patches of \**Cenchrus ciliaris*, *Triodia wiseana* scattered tussock/hummock grasses.

**Veg Condition** Poor - good. Heavy Buffel invasion of small vegetation areas reduces condition substantially.

**Fire Age** >10 years.

### Notes

**Rock Pile Notes** Boulders are mostly angular and vary from small (<50 cm) to very large. There is a strip of *Triodia* between two areas of boulder scree.

### Species List:

Triodia wiseana	+	<1 %	20-50 cm		
Triumfetta clementii	+	<1 %	30 cm		

### Whim Creek Site W147

**Described by** VLL **Date** 1/06/00

**Location** Steep, hilly country approximately 5 km E of Whim Creek Hotel on S side of NW Coastal Highway (~1.5 km S).

**Air Photo** **Photo** 1-> **on Roll** F3 **Video** N **E Photo**

#### Photo Notes

**AMG Zone** 50 593691mE, 7694129mN 593714mE, 7694168mN

**Habitat** Very, very steep rocky, well vegetated (Triodia) slope, facing NNE - rock outcrops and boulders to 1.5 m - with quartz embedded in rock - small round to oval bits 1 cm-2.5 cm quartz.

**Soil** Pink-fine-reddish fine loam.

**Rock Type** Light brown and grey fine grained, often with quartz embedded in surface.

**Vegetation** Gossypium australe (Whim Creek form), Grevillea pyramidalis subsp. pyramidalis scattered shrubs over Indigofera monophylla (Burrup form), Corchorus laniflorus low scattered shrubs over Triodia wiseana closed hummock grassland with Rhynchosia cf. minima open lianes.

**Veg Condition** Excellent. No weeds.

#### Fire Age

**Notes** Smaller herbs occur around rocks and smaller rockpiles - other areas are too densely covered with Triodia to support them.

#### Rock Pile Notes

#### Species List:

## Whim Creek Site W153

**Described by** ASW **Date** 1/06/00

**Location** Approximately 30 km W of Whim Creek on outcrop on W bank of Sherlock River, S of NW Coastal Highway.

**Air Photo** **Photo** 24 **on Roll** AS **Video** N E **Photo**

### Photo Notes

**AMG Zone** 50 563170mE, 7683267mN 563079mE, 7683320mN

**Habitat** Rockpile with moderately steep N facing slope.

**Soil** Red silty clay/pale red-brown loam.

**Rock Type** Subangular to angular dark red-brown, medium-coarse grained, lots of quartz.

**Vegetation** *Terminalia canescens*, (*Ehretia saligna* var. *saligna*) low open woodland to low woodland over *Scaevola spinescens* (narrow form) open shrubland over \**Cenchrus ciliaris*, (*Triodia epactia*) very open tussock/hummock grassland to open tussock/hummock grassland.

**Veg Condition** Poor - very poor; almost all native herb layer understorey has been replaced by \**Cenchrus ciliaris*. Trees and understorey OK but few spp.

### Fire Age

**Notes** Exclude edges (lower, side and top margins). *Terminalia canescens* is patchy.

### Rock Pile Notes
