Warwick Fungi Report 2005

Thirty four people attended the PUBF Fungi workshop at Warwick Bushland on 24 July 2005, held between 10am-4pm.

The workshop was organised together with the Friends of Warwick Bushland. There were 5 groups for the foraging, led by Louise Little and Phylis Robertson, Mark Brundrett and Karen Clarke, Jane Bracken and Kirsten Tullis, Roz Hart, and Jolanda Keeble, all Leaders from the PUBF Project.

The green group ready to go

The orange group in the field collecting fungi

Demonstrating a method of preserving fungi

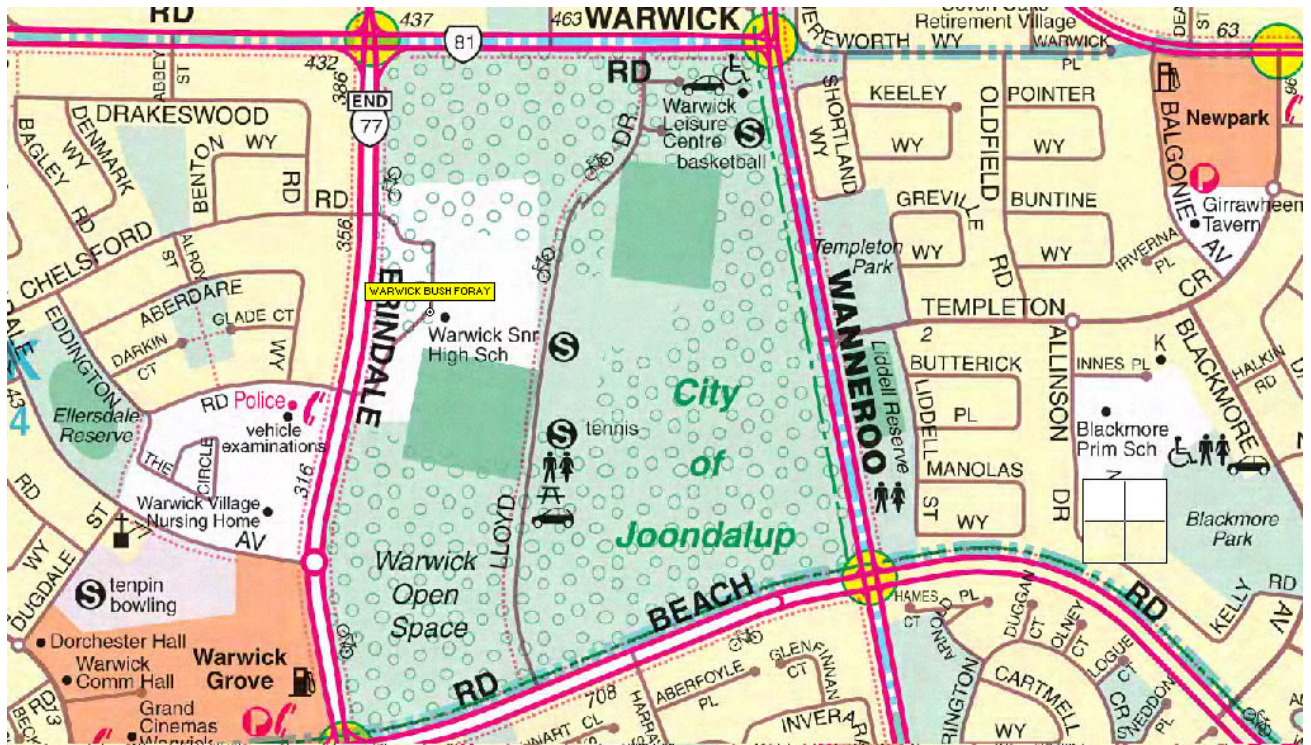

Setting up for the microscopy session

Recommendation: The list of fungi collected on this day represents a very small portion of the fungi which are likely to be present in this reserve. The Friends of Warwick bush are actively surveying the fungi in their bush and they have collated an inventory of the fungi recorded over the last 5 years. As fungi fruit irregularly and intermittently, it will be necessary to continue to conduct these surveys over different days in the fungi season as well as in successive years to produce an accurate inventory of the fungi present in this valuable urban bush reserve.

Perth Urban Bushland Fungi Project, Warwick Workshop Fungi Report 2005

StreetExpress Map showing the location of Warwick Bushland in Warwick.

Aerial photo showing coloured tracks for the 5 foray groups. Louise Little and Phylis Robertson group is orange, Mark Brundrett and Karen Clarke's group is yellow, Jane Bracken and Kirsten Tullis' group is green, Roz Hart's group is blue, and Jolanda Keeble's group is red

Warwick Bushland Fungi List, 24 July 2005

Warwick Bushland has many hundreds of species of fungi, some of which were observed during this workshop. The fungi include many that form essential beneficial mycorrhizal symbioses (partnerships) with plants in the bushland. e.g.fungi such as *Dermocybe clelandii* and *Inocybe* sp. that partner Tuart and Jarrah trees, and contribute to their growth, health and survival.

The list below contains all the fungi recorded by the 5 groups. Some species were collected by more than one group, so they have multiple specimen IDs.

Fungi names are provisional only as many of these fungi have not been examined in detail to confirm the names.

Life Mode Key: M = Mycorrhizal, S = Saprotrophic (Decomposer), S/P = Saprotrophic and Parasitic.
Life Mode is probable only as many fungi have not been tested.

Field Book Page number refers to the Perth Urban Bushland Fungi Field Book which is available for downloading from the Project website at www.fungiperth.org.au
