Guide to the List of CITES Species for the Purposes of the *Environment Protection and Biodiversity Conservation Act 1999*

This is a guide to the list of taxa included on Appendices I, II and III of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in accordance with the provisions of Articles XIV, XV and XVI of the Convention. The list does not include any other species.

The '*Taxon*' column of the list includes the scientific name of the listed taxa. The structure of the list is described in more detail below. Note that where a higher level taxon, such as an entire genus or family is listed the listing applies to all specimens within that taxon, for example, the galah (*Eolophus roseicapilla*) is not specifically listed under the birds listing, however the listing still applies to this specimen because the galah still belongs to the order Psittaciformes.

The '*Common Names include*' column of the list is included for information only and the scientific name determines if a species is included on the list.

The '*Appendix*' column of the list identifies the Appendix of CITES in which the taxon is included. Appendix may also denote an Australian Government Stricter Domestic Measures where stricter regulation than CITES requirements applies to specific taxa when imported to or exported from Australia. For example, a species listed by CITES as Appendix II may be treated as if it were Appendix I by Australia. The notation "p.e." (possibly extinct) is included for certain species.

The '*Notation*' column of the list describes the specimens belonging to that species that are included in that entry. The Notation column may also contain further information regarding Australian Government Stricter Domestic Measures where they apply to specific taxa. In regards to Appendix III species the country listed in the notation column indicates the country for which the species is listed. If there is no entry in the "Notation" column then the definition of a specimen for that particular species is taken to be a specimen that is either that species and/or anything derived from that species.

*The ***First Listed*** Column identifies the earliest date on which the taxon or specimen(s) included in that taxon were listed.

(Bracketed Dates) noted against order or family levels represent the earliest listing of any taxon within that order or family. The date of first listing is represented by the date against the order or family level if a species is transferred from one appendix to another or if a listed species is subsequently included with other species in the listing of a taxon above the species level. For example, the date noted against the Order heading - Primates is 1 Jul 1975. This indicates that the earliest listing date for a specimen/s within the Primates order is 1 Jul 1975, although one or more specimens within this Order may have been listed later. For specific listing dates of individuals within a taxon please see the CITES website (www.cites.org)

The date of a subsequent listing in the CITES Appendices is used only if a species is entirely deleted from the appendices and is subsequently reincluded after an intervening period of time. For the purposes of Stricter Domestic Measures, species or populations are considered to be '*First Listed*' on the date on which a taxon was first listed on the CITES Appendices, not on the date the species or population was first subject to an Australian Stricter Domestic Measure.

The list is organised according to the taxonomic classification of listed species. Taxonomic classification groups living things into a hierarchy according to their relatedness to one another. Kingdom divides plants from animals. Plants are then grouped into Divisions, animals into Phyla (singular: Phylum). These groups are then successively divided into Class, Order, Family, Genus and Species.. For example, the tiger is classified as follows:

Kingdom:	Animalia
Phylum:	Chordata
Class:	Mammalia
Order:	Carnivora
Family:	Felidae
Genus:	Panthera
Species:	tigris

The list is structured as follows:

Major group	Subgroups
	Vertebrate Animals
Phylum: Chordata (Chordates)	
Class: Actinopterygii (Ray-finned fishes)	Family within Order, in alphabetic order.
Class: Amphibia (Amphibians)	Family within Order, in alphabetic order.
Class: Aves (Birds)	Family within Order, in alphabetic order.
Class: Elasmobranchii (Sharks)	Family within Order, in alphabetic order.
Class: Mammalia (Mammals)	Family within Order, in alphabetic order.
Class: Sarcopterygii (Bony fishes)	Family within Order, in alphabetic order.
Class: Reptilia (Reptiles)	Family within Order, in alphabetic order.
	Invertebrate Animals
Phylum: Annelida (Annelid worms)	
Class: Hirudinoidea (Leeches)	Family within Order, in alphabetic order.
Phylum: Arthropoda (Arthropods)	
Class: Arachnida (Arachnids)	Family within Order, in alphabetic order.
Class: Insecta (Insects)	Family within Order, in alphabetic order.
Phylum: Cnidaria (Coral-like animals)	
Class: Anthozoa (Corals, sea anemones)	Family within Order, in alphabetic order.
Class: Hydrozoa (Sea ferns, fire corals)	Family within Order, in alphabetic order.
Phylum: Echinodermata	
Class: Holothuroidea (sea cucumbers)	Family within Order, in alphabetic order.
Phylum: Mollusca (Molluscs)	
Class: Bivalvia	Family within Order, in alphabetic order.
Class: Gastropoda (Snails)	Family within Order, in alphabetic order.
	Plants
Plants	Families, in alphabetic order.

Kingdom: Animalia (Animals)

Animalia spp.	<p>General interpretations:</p> <ul style="list-style-type: none"> • Regarding hybrids: <ul style="list-style-type: none"> - where at least one of the animals in the previous four generations is of a species included in Appendix-I, hybrids shall be treated as specimens of species included in Appendix-I; - where at least one of the animals in the previous four generations is of a species included in Appendix-II, and there are no specimens of an Appendix-I species in such lineage, hybrids shall be treated as specimens of species included in Appendix-II; and - where at least one of the animals in the previous four generations is of a species included in Appendix-III, and there are no specimens of an Appendix-I or Appendix-II species in such lineage, hybrids shall be treated as specimens of species included in Appendix-III.

outlined in the Plantae listing.

All parts and derivatives are subject to the Convention, **except:**

- a) seeds, spores and pollen (including pollinia);
- b) seedling or tissue cultures obtained *in vitro*, in solid or liquid media, transported in sterile containers;
- c) cut flowers of artificially propagated plants; and
- d) fruits and parts and derivatives thereof of artificially propagated plants of the genus *Vanilla*.

Artificially propagated hybrids of the following genera are **not subject** to the provisions of the Convention, if conditions, as indicated under a) and b) below, are met: *Cymbidium*, *Dendrobium*, *Phalaenopsis*, and *Vanda*:

- a) Specimens are readily recognizable as artificially propagated and do not show any signs of having been collected in the wild such as mechanical damage or strong dehydration resulting from collection, irregular growth and heterogeneous size and shape within a taxon and shipment, algae or other epiphyllous organisms adhering to leaves, or damage by insects or other pests; and
- b) i) when shipped in non-flowering state, the specimens must be traded in shipments consisting of individual containers (such as cartons, boxes, crates or individual shelves of CC-containers) each containing 20 or more plants of the same hybrid; the plants within each container must exhibit a high degree of uniformity and healthiness; and the shipment must be accompanied by documentation, such as an invoice, which clearly states the number of plants of each hybrid; or
- ii) when shipped in flowering state, with at least one fully open flower per specimen, no minimum number of specimens per shipment is required but specimens must be professionally processed for commercial retail sale, e.g. labelled with printed labels or packaged with printed packages indicating the name of the hybrid and the country of final processing. This should be clearly visible and allow easy verification.

Plants not clearly qualifying for the exemption must be accompanied by appropriate CITES documents.
