

## FAMILY ECNOMIDAE

### Habitat profile for *Ecnomina* Genus F sp. 30

*Ecnomina* F sp. 30 was only recorded from 1 New South Wales locality in this study.

*Ecnomina* F sp. 30 was recorded from an edge habitat sample from a stream at 190 m altitude, only 5.9 km from the source, with predominantly boulders and sand substrate with 5% detritus cover, from a stream of width 8 m with water depth of 0.5 m, low alkalinity 10 mg/L and low conductivity 37  $\mu$ S/cm.

The stream had low water temperature (10.7 °C), near neutral pH 7.2 and low alkalinity (10 mg/L).

Distribution of *Ecnomina* sp AV30
