Metataxis Righi, 1985

Metataxis americanus (Černosvitov, 1939) : NT (As a result of a taxonomic analysis of the Haplotaxidae, Brinkhurst (1988) placed the genus *Metataxis* sensu Omodeo as incertae sedis in the former order Lumbricina. However, such a decision created a taxonomic instability as no family was suggested to harbour this taxon. Hence, we decided here, as a conservative approach, to keep *Metataxis* in the family Haplotaxidae, pending future studies as to its family assignment. Brinkhurst R. Rhyacodrilus hiemalis Ohtaka, 1995 : PA (Semernoy (2004) put in synonymy this species with *R. sokolskajae* Semernoy, 1971 on the observation that some material from Lake Biwa was virtually identical to worms from the Amur River, described as *R. sokolskajae*, and that many species in Lake Biwa are also known from the Amur basin. However, several *Rhyacodrilus* species are distributed in Lake Biwa, and the possibility that specimens examined by Semernoy correspond to some species different from *R. hiemalis* cannot be excluded. According to Ohtaka (1995), *R. hiemalis* differs from *R. sokolskajae* by large morphological differences and should be regarded as a separate taxon. We herewith follow his rationale and deem preferable to maintain both taxa distinct.)
