An underwater photograph showing a large school of silver fish with dark vertical stripes, likely snappers, swimming in a clear blue sea. Below them is a diverse and colorful coral reef, featuring prominent orange and red branching corals. Sunlight filters down from the surface, creating a bright, shimmering effect in the water.

Beneath Busseleton Jetty

Book launch

Historic Busselton Jetty—
more than 138 years old
and more than 1.8
kilometres long—is the
longest wooden jetty in the
southern hemisphere.
Effectively a huge artificial
reef, it is a magnet to
visitors, divers, in fact,
anyone interested in the
marine environment.

The jetty has been
colonised by an amazing
diversity of colourful corals,
sponges, sea stars,
shellfish, fish and other
forms of marine life.

Beneath Busselton Jetty
takes a detailed look at the
jetty's history and its
underwater inhabitants.

The Acting Executive Director of the
Department of Conservation
and Land Management
Keiran McNamara

cordially invites

to the launch of the Department's
latest book

Beneath Busselton Jetty

by the
Minister for the Environment and Heritage
