

## Asteraceae specimens collected by Johann August Ludwig Preiss

N. S. Lander

Western Australian Herbarium, George Street, South Perth, Western Australia 6151

### Abstract

Lander, N. S. Asteraceae specimens collected by Johann August Ludwig Preiss. Kingia 1(1): 9-19 (1987). All specimens of Asteraceae collected by J. A. L. Preiss during his visit to Western Australia from 1838 to 1842 located in herbaria at Lund (LD) and Geneva (G) are listed. For each specimen the original Preiss field collection number (if cited) and the number under which it is recorded in Lehmann's "Plantae Preissianae" are noted as well as its type status, location and current name.

Of a total of 117 Preiss Asteraceae specimens located at LD, 57 are types of taxa described in "Plantae Preissianae". Of 80 such specimens held at G, 40 are types.

Preiss specimens of *Olearia* species located at CGE, CO, FL, K, L, MEL, P and WRSL and are also listed. It is suggested that the extent of Preiss specimens represented at K may be far greater than has hitherto been realised.

### Introduction

In the course of my year as Australian Botanical Liaison Officer at Kew, 1984-5, I visited several European herbaria, principally in order to examine specimens of *Olearia*, the genus I am currently revising. In herbaria at the Botaniska Museum, Lund (LD) and the Conservatoire et Jardin Botaniques, Geneva (G) I am confident that I have located all, or nearly all of the specimens of Asteraceae collected by the German naturalist Johann August Ludwig Preiss during his visit to Western Australia from 1838 to 1842. Since a large proportion of these specimens are types of taxa described in J. G. C. Lehmann's "Plantae Preissianae" (1844-8) I present the following list of my findings as being of general interest.

PREISS FIELD NUMBER	PL. PREISS. NUMBER	(a) TYPE STATUS AND LOCATION (b) CURRENT NAME
0010	-1	(a) P (b) <i>Olearia axillaris</i> (DC.) F. Muell. ex Benth.

<sup>1</sup> Specimens not cited in "Plantae Preissianaæ".

<sup>2</sup> Specimens not located at LD or G.

<sup>3</sup> The sole record of this species in Western Australia. Davis (1950) records a possible syntype of *Lagenophora gracilis* Steetz [= *Lagenifera stipitata* (Labill.) Druce] in Melbourne (MEL).

<sup>4</sup> Specimens noted by Agardh in his personal copy of Lehmann's "Plantae Preissianaæ" as present at LD, but not found there despite an exhaustive search.

<sup>5</sup> Burbidge (1948) has incorrectly nominated duplicates of this gathering as lectotype and lectoparatypes of *Brachycome iberidifolia* var. *huegeliana* Steetz. In his notes on this taxon Steetz cites the type of *Brachycome iberidifolia* Benth. collected by Huegel. Thus the name *Brachycome iberidifolia* var. *huegeliana* Steetz is not validly published.

### Discussion

An account of Preiss's activities in Australia has been presented by McGillivray (1975). General background concerning the specimens at Lund and evidence that they are in fact from Lehmann's personal herbarium has been given by Wilson (1983) and Crisp (1983).

As can be seen from the above list the representation at Lund of Asteraceae collected by Preiss is high indeed. Of 142 collections recorded in "Plantae Preissianaæ" 115 are represented at Lund, 57 of which are types of taxa described therein, 55 by J. Steetz, the botanist responsible for the account of Asteraceae, one by Nees and one by Lehmann himself. Each of these specimens has full details of locality and date corresponding to those in "Plantae Preissianaæ". Furthermore, each has been annotated by Steetz. Thus, as Crisp (1983) argues, where lectotypification has not yet been made the Lund specimens have equal status with those from Steetz's own herbarium (now at MEL) and should be considered when names from "Plantae Preissianaæ" are lectotyppified.

A further two Preiss Asteraceae specimens were found at Lund which lack the numbers and collecting details that would allow them to be related to those recorded in "Plantae Preissianaæ".

At the Geneva herbarium a large suite of Preiss Asteraceae specimens was located in the main collection. A smaller number bearing what appear to be original Preiss field numbers were found amongst undetermined material at the end of the family. Several more similarly numbered sheets of Asteraceae were found at other European herbaria visited. These collections, 23 in all, span the period 17 December 1838 to 8 November 1840, and the numbers are in an irregular chronological order. In some cases these specimens bear details of locality and date which allow them to be correlated with those of "Plantae Preissianaæ"; others represent taxa not considered there.

The Preiss specimens at Geneva appear to have come from four independent sources, namely:

- (a) specimens with Plantae Preissianaæ numbers labelled "in col. Swan River" in an unknown hand, received in 1843, with separate labels bearing Plantae Preissianaæ names;
- (b) specimens with Plantae Preissianaæ numbers and names, and printed labels reading "Mr L. Preiss, Swan River, 1837-40";
- (c) specimens with Preiss' original numbers, labelled with full details of locality and date in an unknown hand, without names, each with a second printed label reading "Swan-River Colony. - Nouvelle Holland 1839-1840, Preis.", received in July 1842;
- (d) specimens donated by the Candolle family in 1921 with Preiss' original numbers, labelled "Nov. Holland., Swan River", without date, without names, received in 1854, each with "Ferd. Muller" crossed out, some with number tags.

Clearly, series (a) and (c) above were distributed not long after Preiss returned to Europe in early 1842 where the general systematic arrangement of his collections was completed and the organisation of "Plantae Preissianaæ" commenced under the guidance and supervision of Lehmann at Hamburg. It seems likely that the name labels for series (a) were provided at some later date, perhaps after publication of the relevant parts of "Plantae Preissianaæ".

Of the 80 Preiss Asteraceae specimens located at Geneva, 40 are types of taxa described in "Plantae Preissianaæ".

In the course of my examination of specimens of *Olearia* in European herbaria I encountered Preiss collections in CGE, CO, FI, K, L and P. These are listed above.

It is worth noting here that Preiss' Asteraceae specimens held at Florence (FI) are labelled "Comm. dal Signore Preiss in Febrizio 1846" and bear Plantae Preissiana numbers and names. It seems that Preiss himself was distributing material as late as 1846. This and the preceding observations provide confirmation of Crisp's (1983) surmise that material not distributed to the various authors of "Plantae Preissiana" was retained by Preiss and offered for sale.

Burbidge (1972) has catalogued Preiss specimens held at Kew and Missouri (MO). In her list only a single *Olearia* collection is noted for Kew. However, I myself encountered a total of five Preiss *Olearia* specimens at Kew. The additional four bear Preiss field numbers which, by virtue of the collection details, can easily be related to those of "Plantae Preissiana". Presumably they are from amongst specimens purchased by William Hooker in London before Preiss continued on to Hamburg. Thus they might be expected to bear Preiss field numbers rather than those allocated later by Lehmann.

Although this sample is rather small it suggests that the total of Preiss specimens represented at Kew may be far greater than has hitherto been realised.

All the Preiss Asteraceae specimens at Lund of type status were photographed. Black and white negatives and prints are lodged at the Western Australian Herbarium (PERTH).

### Acknowledgements

This study was made possible by the travel component of funds provided by the Australian Bureau of Flora and Fauna (Department of Home Affairs and Environment) during my tour of duty as Australian Botanical Liaison Officer, 1984-5. I am especially grateful to Prof. Sven Snogerup and his staff at the Botaniska Museum, Lund, to the late Prof. Gilbert Boquet and to Dr Manfred Dittrich of the Conservatoire et Jardins Botaniques, Geneva for their hospitality and assistance during my visits to their herbaria. I wish to thank Mr P. G. Wilson for confirming my identification of certain material borrowed from Geneva.
