

SHORT COMMUNICATION

Updates to Western Australia's vascular plant census for 2017

The census database at the Western Australian Herbarium (PERTH), which provides the nomenclature for the website *FloraBase* (Western Australian Herbarium 1998–), lists current names and recent synonymy for Western Australia's native and naturalised vascular plants, as well as algae, bryophytes, lichens, slime moulds and some fungi. The names represented in the census are either sourced from published research or denote as yet unpublished names based on herbarium voucher specimens. We herein summarise the changes made to vascular plant names in this database during 2017.

Sixty-five taxa were newly recorded for the State, of which eight are naturalised and 33 have been added to the *Threatened and Priority Flora list for Western Australia* (Smith 2017; Western Australian Herbarium 1998–) (Table 1). A total of 201 name changes were made (Table 2). Plant groups for which a number of name changes were made include *Brachyloma* Sond. (Hislop & Cranfield 2017), *Eremophila* R.Br. (Buirchell & Brown 2016), *Hibbertia* Andrews (Thiele 2017a, 2017b; Thiele & Nge 2017), *Stylium* Sw. (Lowrie & Kenneally 2017; Wege 2017b) and *Triodia* R.Br. (Anderson *et al.* 2017). Numerous phrase names in *Leucopogon* R.Br. were formally published (Hislop 2016a) with some being transferred to the newly circumscribed genus *Styphelia* Sm. (Hislop & Puente-Lelièvre 2017). Several changes were made in *Daviesia* Sm. following the publication of a monograph for the group (Crisp *et al.* 2017). A single manuscript name was changed to a phrase name under Council of Heads of Australasian Herbaria (CHAH) guidelines for informal names (Barker 2005), while two manuscript names and 58 phrase names were formally published (Table 2). Table 2 also includes cases where there has been a change of taxonomic concept, misapplication, exclusion or rank change.

PERTH largely follows the family circumscriptions of the Angiosperm Phylogeny Group (APG). To align with their latest classification (APG IV: Angiosperm Phylogeny Group 2016) the following changes were made to family placements: *Anacampseros* L. (from Portulacaceae to Anacampserotaceae), *Calandrinia* Kunth. and *Montia* L. (from Portulacaceae to Montiaceae), *Macarthuria* Endl. (from Molluginaceae to Macarthuriaceae), and *Melianthus* L. (from Melianthaceae to Francoaceae).

Table 1. New records added to Western Australia's vascular plant census during 2017. *in litt.* = in correspondence; *in sched.* = on herbarium sheet/label; * = naturalised; T, P1–P4 = Conservation Codes for Western Australian Flora (Smith 2017; Western Australian Herbarium 1998–).

Table 2. Changes to existing entries in Western Australia's vascular plant census during 2017. Excluded taxon = a name used in the botanical literature that refers to a taxon never occurring in WA; misapplied name = a name used in the botanical literature but now considered to refer to one or more different WA taxa; nomenclatural synonym = a superseded name based on the same type specimen as the accepted name—the epithet is usually transferred to a different genus name or rank; taxonomic synonym = a superseded name based on a different type specimen to the accepted name; orthographic variant = mis-spelling of a name in original publication; *in litt.* = *in correspondence*; *in sched.* = on herbarium sheet/label. Status: * = naturalised; T, P1–P4 = Conservation Codes for Western Australian Flora (Smith 2017; Western Australian Herbarium 1998–).
