1. Introduction

This report is one of a Technical Series accompanying the final report of the Perth Photochemical Smog Study (PPSS), to which the reader is referred for background information on the study. The PPSS was a joint exercise by Western Power and the Department of Environmental Protection (DEP).

During the PPSS, air quality and meteorological parameters were measured across the Perth metropolitan region. Figure 1 shows a map of Perth with all air quality monitoring stations marked. Table 1 lists the parameters measured at each site and Table 2 summarises the periods of operation of each site.

This document is a summary of the air quality monitoring data gathered by the DEP during the study period 1 October 1992 to 30 April 1995. All the data collected throughout the study are stored in computer data bases and are available for various purposes including further analysis and modelling. The purpose of this data report is to provide a readily accessible summary of the data to potential users.

PARAMETER	PARAMETER DESCRIPTION
O3	ozone
NOx	nitric oxide and nitrogen dioxide
SO2	sulphur dioxide
CO	carbon monoxide
H/C	hydrocarbons
TSP	total suspended particulates
VISI	visibility
PM2.5	sub 2.5 micron particles
PM10	sub 10 micron particles
WS10	wind speed at 10 metres
WD10	wind direction at 10 metres

PARAMETER	PARAMETER DESCRIPTION
AT10	air temperature at 10 metres
DELT	delta temperature
NR	net radiation
SR	solar radiation
UV	solar UV radiation
RAIN	rain gauge
PRES	pressure gauge
RH10	relative humidity
ATR	airtrak smog monitor
SODR	wind profile
RASS	wind and temperature profile

General Statistics

MAXIMUM ONE HOUR NITROGEN DIOXIDE CONCENTRATION IN THE PERTH METROPOLITAN REGION
 DURING THE PERIOD 1 OCTOBER 1992 TO 30 APRIL 1995

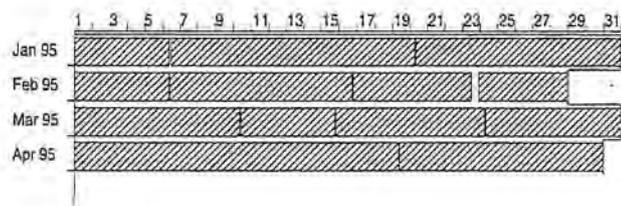

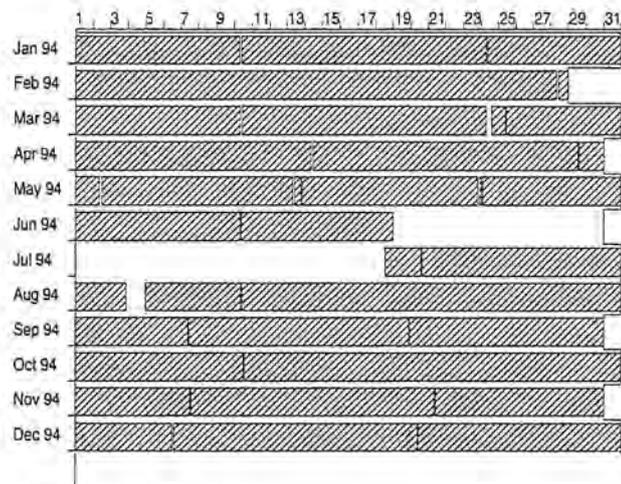

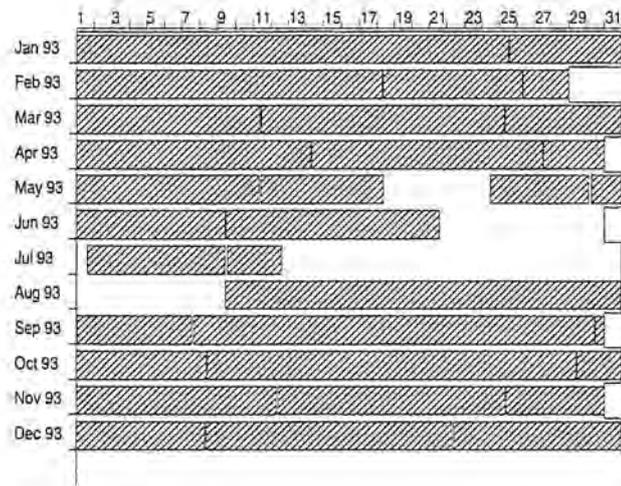

B2 -
Operational periods
of nitrogen dioxide
monitors

Periods of operation of the oxides of nitrogen monitor at Caversham air quality monitoring station.

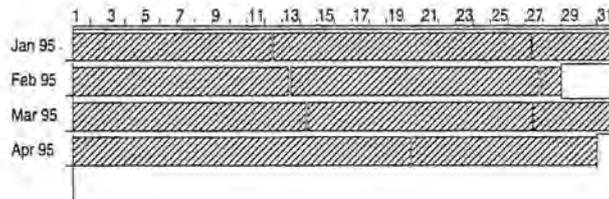

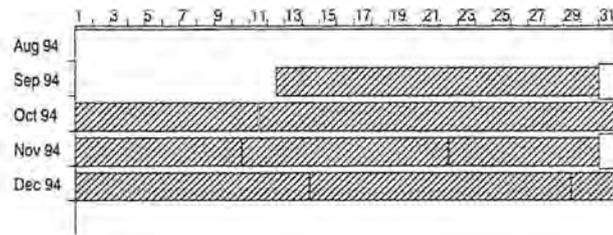

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Cullacabardee air quality monitoring station.

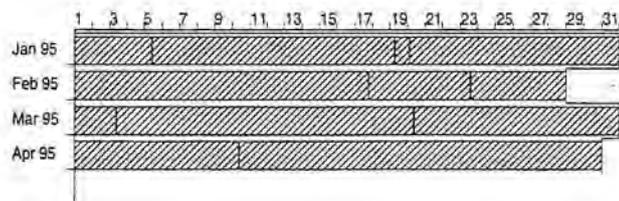

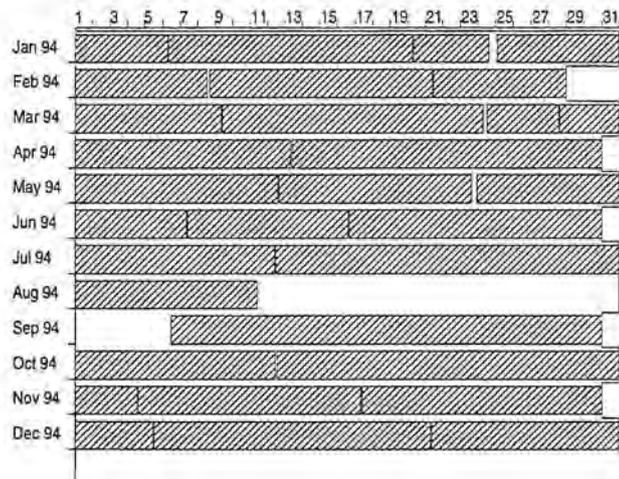

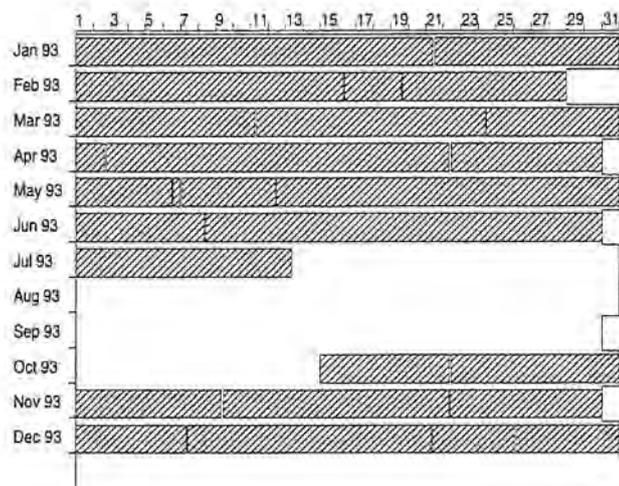

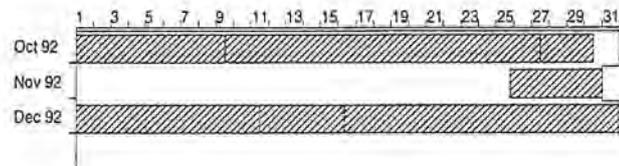

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Gingin air quality monitoring station.

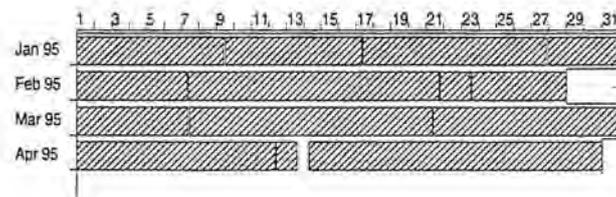

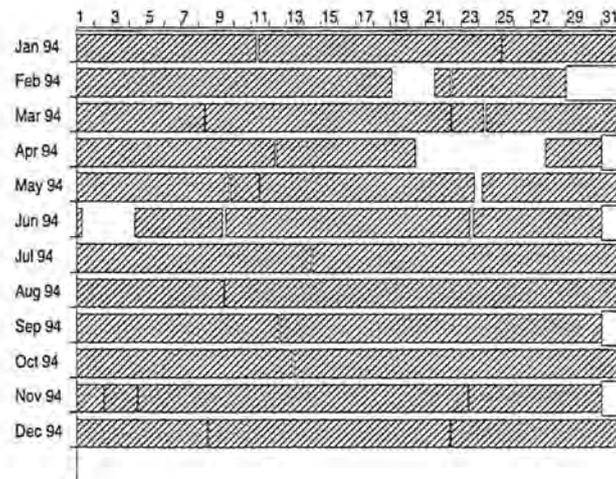

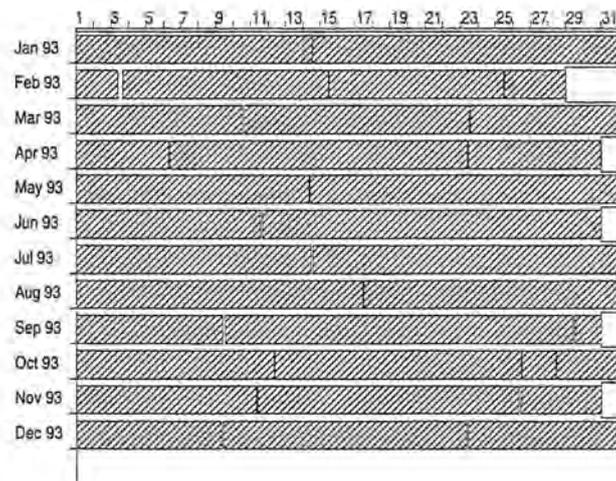

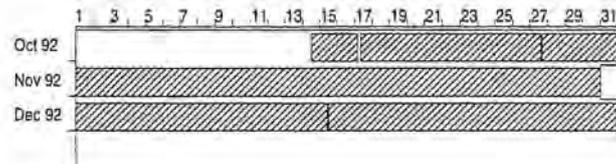

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Kenwick air quality monitoring station.

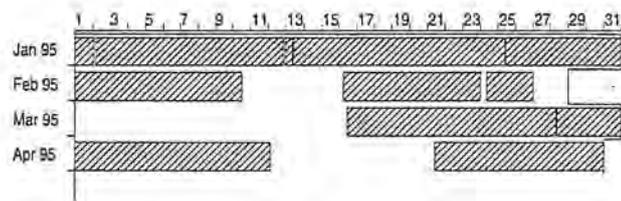

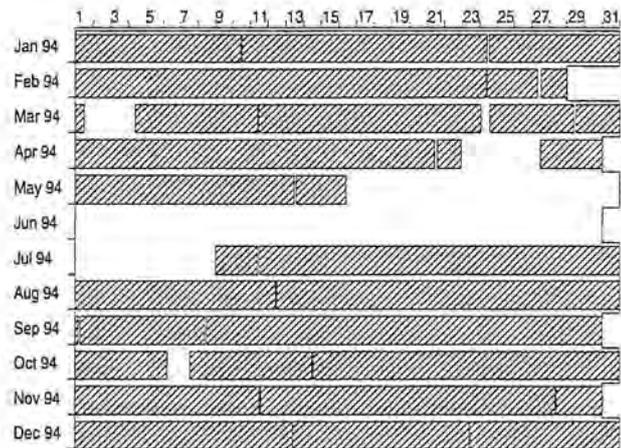

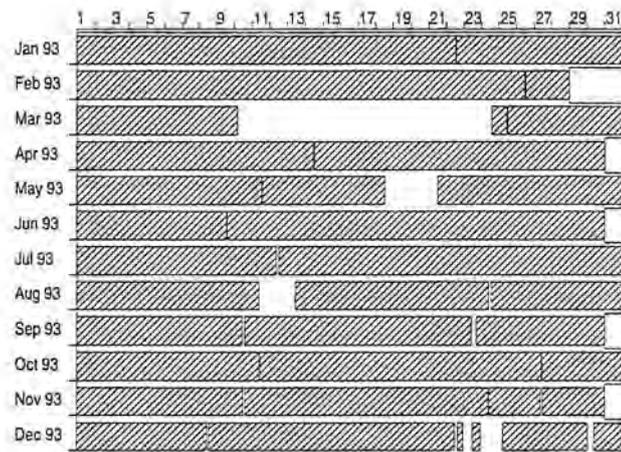

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Quinns Rocks air quality monitoring station.

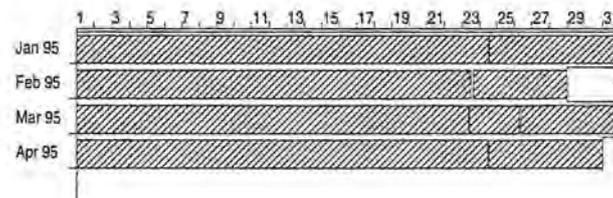

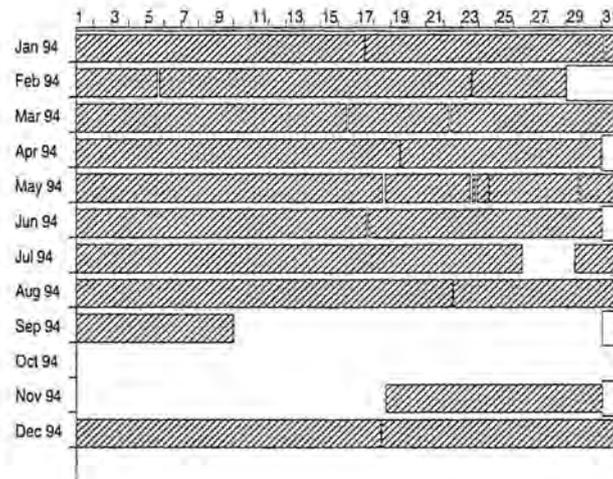

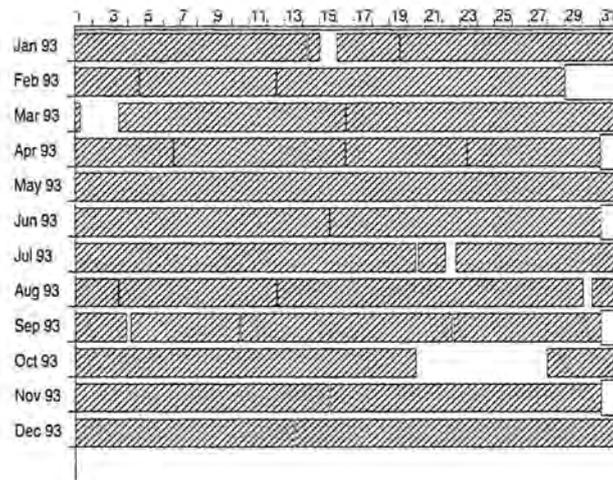

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Rolling Green air quality monitoring station.

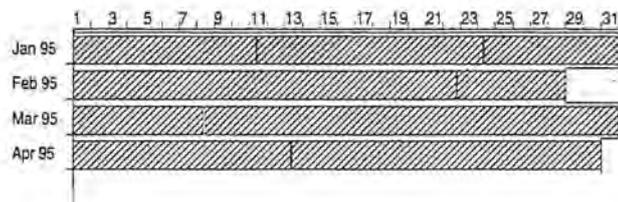

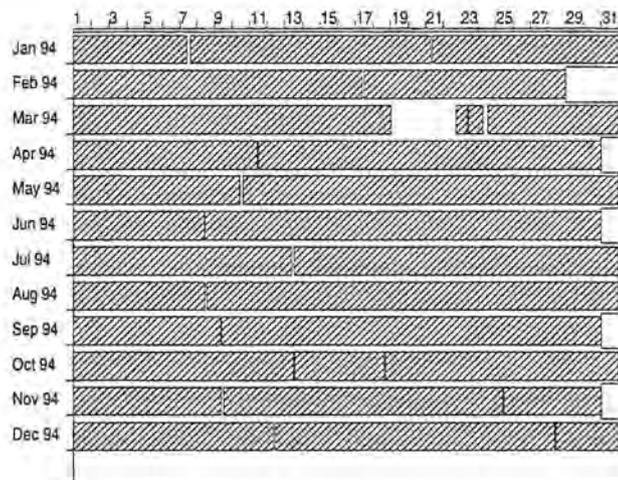

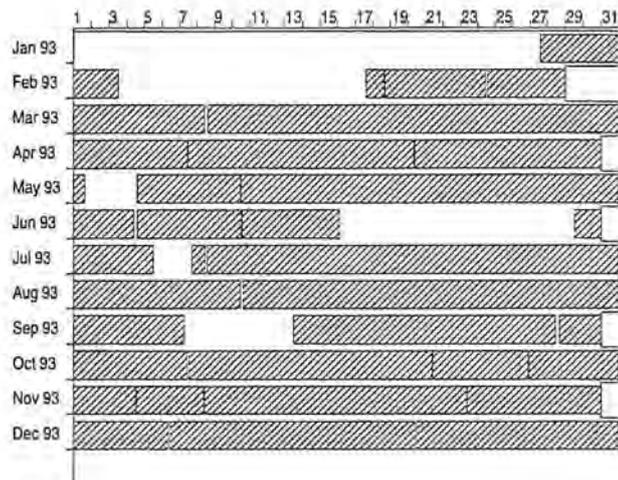

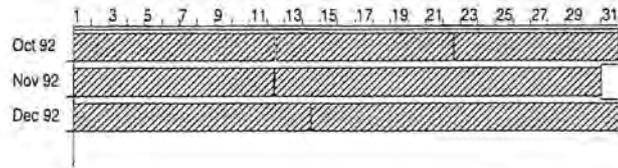

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Rottneast Island air quality monitoring station.

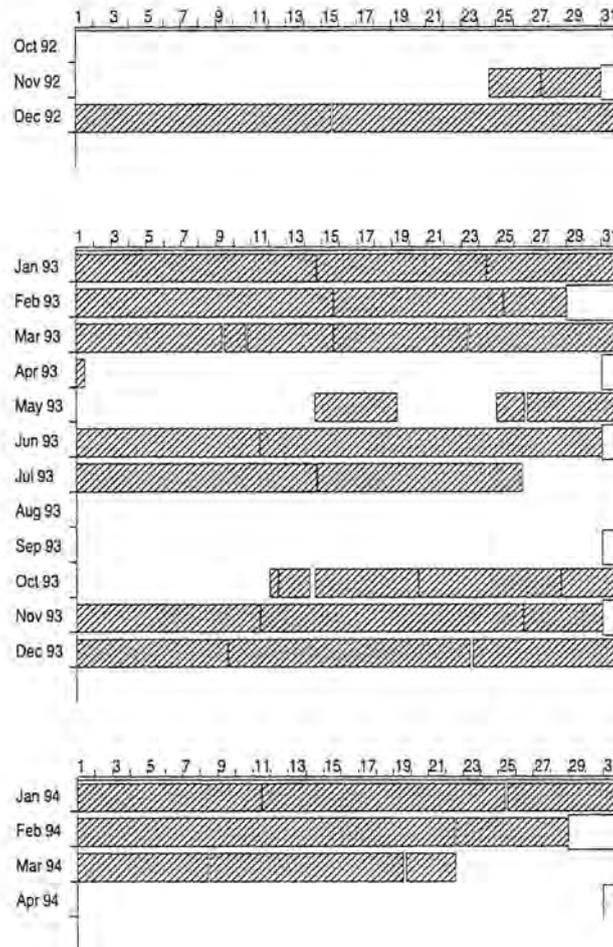

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Swanbourne air quality monitoring station.

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

Periods of operation of the oxides of nitrogen monitor at Two Rocks air quality monitoring station.

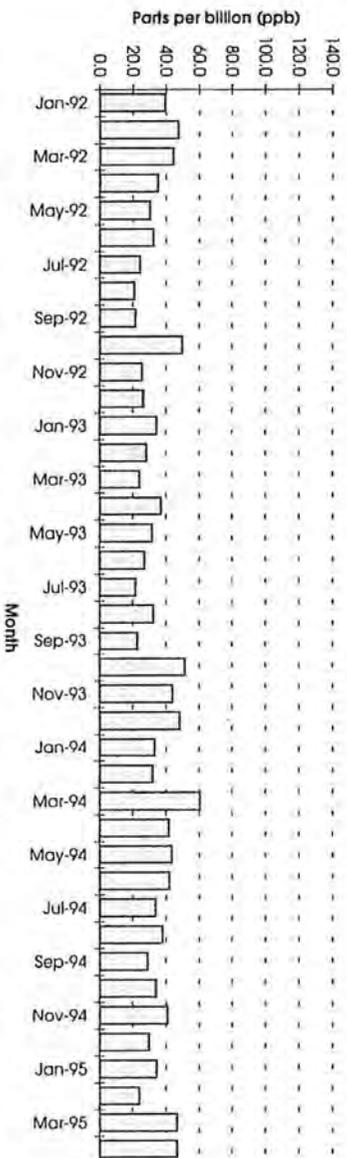

Note: Gaps represent periods when the monitor was being calibrated, out of service for maintenance or experiencing a power supply failure.

NOTE:

The WHO air quality guidelines for CO are:

- 30 mg/m³ (25ppm) for 1 hour
- 10 mg/m³ (10ppm) for 8 hours.

The NHMRC air quality guidelines for CO is:

- 10000 µg/m³ (9ppm) for 8 hours

The NHMRC says that the guideline holds at 0°C whereas it is unclear what conditions are attached to the WHO guidelines. In both cases the quoted conversions to ppm appear to be imprecise. A conservative approach used here is to take the WHO mg/m³ guidelines and apply a conversion of 1 ppm = 1.25 mg/m³ @ STP to yield the corrected guidelines:

- 30 mg/m³ (24ppm) for 1 hour
- 10 mg/m³ (8ppm) for 8 hours.
