3. Other Hydrological Research in the Jarrah Forest	5
4. Experimental and theoretical methods	12

1. INTRODUCTION

The purpose of this document is to bring together references of publications, reports, theses and other material relevant to research and management of water aspects of the jarrah forest. The reference list is aimed to benefit researchers and managers addressing the problems of natural and man-made pressures on the jarrah forest. Particular emphasis is given to bauxite mining, which is currently proceeding in the northern jarrah forest.

The reference list is divided into three sections. Section 2 deals with hydrological aspects of bauxite mining. All other hydrological research related to the jarrah forest is collected in section 3. Section 4 covers experimental and theoretical methods that have been developed or used in jarrah forest hydrology research.

2. BAUXITE HYDROLOGY RESEARCH
