

THE RESERVE FLORA LIST

(Draft SVL 3/89)

This list contains those species of flora which have or are being considered for declaration as Declared Rare Flora, but which have not fulfilled the addition criteria as outlined in Policy Statement No. 9. Species present on lists one - four require further survey before they may be considered for declaration. Species present on list five have been adequately surveyed and are considered not to be endangered or in need of special protection, but could be if present circumstances change.

The lists are arranged in order of priority for which further survey work should be undertaken to determine the distributional and conservation status of the species tabled. No further survey work is required for those species listed as Priority 5, other than routine inspections of existing populations to monitor their condition.
