

# RESERVE FLORA LIST

## ALPHABETIC LISTING OF SPECIES

(MAB 26/2/90)

CHANGES MADE 21/6/90.

### Key:

#### PRIORITY CODES

- Priority One - very high risk taxa  
Species which are known from one or a few localities on lands under immediate threat, e.g. road verges, urban areas, active mineral leases, areas grazed by feral animals, etc. These species are under consideration for declaration as rare flora but are in need of urgent high priority further survey.
- Priority Two - threatened taxa  
Species which are known from one or a few localities on lands not under immediate threat, e.g. nature reserves, national parks, vacant crown land, water reserves, etc. These species are under consideration for declaration as rare flora but are in need of urgent high priority further survey.
- Priority Three - vulnerable taxa  
Species which are known from several localities, some of which are on lands not under immediate threat. These species are under consideration for declaration as rare flora but are in need of further survey.
- Priority Four - taxa presumed extinct  
Species which have not been collected or reliably observed in the wild over the past 50 years, or whose total known wild population has been destroyed more recently.
- Priority Five - taxa for high priority monitoring  
Species which are considered to have been adequately surveyed and not endangered or in need of special protection, but could be if present circumstances change. Taxa that are vulnerable to disease or disturbance or have restricted geographic ranges. These species are usually represented on reserves.
- Priority Six - poorly collected taxa.  
Taxa which may be endangered and which require further survey, because of a paucity of information concerning their distribution and abundance. Such taxa may occur in relatively remote and poorly collected regions, or may have inconspicuous or cryptic life forms. These taxa are in need of further survey.

Priority Seven - uncertain taxonomic status

Taxa for which there is some reason to suppose continued existence in the wild is endangered, but their taxonomic status is in doubt. These taxa are in need of urgent taxonomic revision, and further survey.

Priority Eight - adequately surveyed taxa

Taxa for which adequate surveys have been completed. Many of these taxa are to be submitted for consideration for inclusion on the list of Declared Endangered Flora. Some of these taxa are presumed to be hybrids.

Priority Nine - commercially exploited taxa

Taxa that are commercially exploited by the Western Australian Wildflower Industry. They may not be adequately represented on conservation reserves, or some characteristic of their abundance and distribution may make them vulnerable to unrestricted exploitation.

#### CALM REGIONS

- \* = species which also occur outside Western Australia
- + = species presumed to be the result of hybridization
