All properties and/or land subject to a Bushfire Management Plan, Emergency Management Plan, or an approved Bushfire Attack Level assessment (BAL), as a result of subdivision, development application or a City approved treatment plan, must comply with the listed requirements in their entirety. **Environmental and Heritage Conditions**

Any property subject to environmental and heritage value such as, but not limited to, Threatened Ecological Communities (TEC), Bush Forever sites, Declared Rare Flora, and Fauna (DRF) sites and Aboriginal Heritage sites should seek further information about what can or cannot be done prior to carrying out requirements under this Notice.

**Low Threat Minimal Fuel Vegetation**

Minimal fuel condition means there is insufficient fuel available to significantly increase the severity of the bushfire attack. Low threat vegetation includes grassland managed in a minimal fuel condition, maintained lawns, golf courses, maintained public reserves and parklands, vineyards, orchards, cultivated gardens, commercial nurseries, nature strips and windbreaks. Properties of these description will still be assessed under this Notice and can apply for a variation.

**DEFINITIONS**

**Fire Break:** A strip of land free of all flammable and combustible material with the intention of preventing the outbreak of a bush fire and provides visible safe access on the property for emergency vehicles and other firefighting operations. It is acceptable to install a firebreak around naturally occurring obstacles. Fire breaks may be constructed by one or more of the following methods: chemical spraying, scarifying, ploughing, raking, cultivating, or another method as approved by an Authorised Officer.

- Clearance must be no less than 3-metres wide and 4-metres in height inside and along all boundaries (including boundaries adjacent to roads, rail and drain reserves and all public open space reserves).
- Must not be more than 4-metres wide (further width extensions may be considered upon written application for approval to the City). Maintained, reticulated living lawns are lawns considered to be kept completely green. Driveways may be acceptable in conjunction with, or in lieu of, fire breaks. Contact a City Authorised Officer for further assistance.
- Must have a corner turning radius of up to 10 metres.
- Must be a continuous trafficable surface for a 4WD vehicle, be clear of any obstructions and must not terminate in a dead end.

**Fuel Load:** Can be live and dead vegetation that accumulates over time. This Notice refers only to dead vegetation.

**Fine fuels include** = leaf litter, grasses, weeds, twigs (up to 6mm diameter), bark etc.

**Heavy (course) fuels include** = branches, logs, stumps etc. A fuel load depth of 15mm (fine fuels) to the mineral earth is indicative of approximately 8 tonne per hectare. The more fuel load, the higher the flame height and increased fire intensity. Mulch piles, stored firewood and burn piles can contribute to fuel loading on land and must be stored safely away from assets, removed from the property, or actioned as directed by an Authorised Officer.

ANTHONY VULETA, Chief Executive Officer.
