## LAND FOR WILDLIFE

Land for Wildlife is a voluntary nature conservation program that encourages landowners to set aside land for wildlife. It provides a framework for landowners to manage their land for wildlife and offers a range of incentives to encourage participation.

Landowners - what's in it for you?  
• Increased property value  
• Better habitat  
• Better landscape  
• Increased wildlife and plant diversity  
• Increased water and soil conservation  
• Increased biodiversity

### Native Fauna Species of the Perth Hills

Wildlife habitat on private land can contribute to the long-term survival of native plants and animals. Land for Wildlife is a voluntary nature conservation program that encourages landowners to set aside land for wildlife. It provides a framework for landowners to manage their land for wildlife and offers a range of incentives to encourage participation.

## ROADSIDE FLORA AND FAUNA

Many species of trees and shrubs are dependent on roadside flora and fauna for their survival. Roadside flora and fauna are often the first to be lost when a road is built or widened. This loss can have a significant impact on the local ecosystem and the survival of many species.

In some areas of roadside flora and fauna, there have been major losses. This is due to the fact that many of these species are not well known and are often overlooked. As a result, they are often the first to be lost when a road is built or widened. This loss can have a significant impact on the local ecosystem and the survival of many species.
