

3. While some visitors go to Brides Cave in the Leeuwin Naturaliste National Park to defy gravity by abseiling into the doline others are happier admiring this natural marvel from the safety of a new viewing platform recently constructed with financial and other assistance from cavers. The simple wooden structure belies the solid foundations and careful carpentry necessary when building next to a long drop. (Negative number 19)

4. Many of the trees close to the doline of Brides Cave have suffered from rope burns. Designated abseiling points have now been selected and structures like this anchor point has been built. What you cannot see is the stainless steel reinforcement and the majority of the structure which is below ground. Contact Caves Ranger Rob Klok on (097) 555 324 if you want detailed drawing. (Negative number 7)

2. All visitors to Redgate Beach in the last year have admired the excellent workmanship that makes the difference between a completed recreation site and a place to be proud of. Most of CALM's workers at Margaret River were involved in the new works at some stage and here Bernie McKeown and Tony King are discussing the finer points of a concrete plinth for mounting small information panels at Redgate Beach. Contact Forest Ranger Steve Pickering on (097) 572 322 if you want details of the plinth construction. (Negative number 20)

1. The new lookout at Redgate Beach in the Leeuwin Naturaliste National Park. The brass plaque commemorating the 1976 re-enactment of the rescue of the passengers from the steamship "Georgette" was replaced on the new concrete plinth while additional information about the Georgette has been fixed to the low walls of the lookout. The lookout is designed to draw visitors in a narrow walkway and then focus their attention outwards on the wreck site and the spectacular but treacherous coastline. (Negative number 3)
